### 3 Description

This release introduces enhancements targeting the overall robustness of the u-blox M9 platform when operating in corner case scenarios. In this release, no new feature is introduced, and no feature has been removed.

See referenced documents [1] and [2] for more details. The new firmware is available at [3].

### 4 Customer impact and recommended action

The new product firmware functions in a very similar way to the previous firmware version and offers better performance in existing applications that use common configuration settings. It is always recommendable to use the latest firmware available.

For new designs, u-blox recommends using new modules for any qualification process.
