

# u-blox M9 MDR 2.16

**u-blox M9 multi-mode dead reckoning (MDR) GNSS firmware  
Protocol version 35.16**

Interface description

## **Abstract**

This document describes the interface (version 35.16) of the u-blox M9 multi-mode dead reckoning (MDR) GNSS firmware.

# Contents

<b>1 General information.....</b>	<b>12</b>
1.1 Document overview.....	12
1.2 Firmware and protocol versions.....	12
1.3 Receiver configuration.....	14
1.4 Message naming.....	14
1.5 GNSS, satellite, and signal identifiers.....	14
1.5.1 Overview.....	14
1.5.2 GNSS identifiers.....	15
1.5.3 Satellite identifiers.....	16
1.5.4 Signal identifiers.....	16
1.6 Message types.....	17
<b>2 NMEA protocol.....</b>	<b>19</b>
2.1 NMEA frame structure.....	19
2.2 NMEA protocol configuration.....	19
2.3 NMEA-proprietary messages.....	20
2.4 NMEA multi-GNSS operation.....	21
2.5 NMEA data fields.....	21
2.5.1 NMEA Talker ID.....	21
2.5.2 NMEA extra fields.....	21
2.5.3 NMEA latitude and longitude format.....	22
2.5.4 NMEA GNSS, satellite, and signal numbering.....	22
2.5.5 NMEA position fix flags.....	22
2.5.6 NMEA output of invalid or unknown data.....	23
2.6 NMEA messages overview.....	24
2.7 Standard messages.....	25
2.7.1 DTM.....	25
2.7.1.1 Datum reference.....	25
2.7.2 GAQ.....	25
2.7.2.1 Poll a standard message (Talker ID GA).....	25
2.7.3 GBQ.....	26
2.7.3.1 Poll a standard message (Talker ID GB).....	26
2.7.4 GBS.....	26
2.7.4.1 GNSS satellite fault detection.....	26
2.7.5 GGA.....	27
2.7.5.1 Global positioning system fix data.....	27
2.7.6 GLL.....	28
2.7.6.1 Latitude and longitude, with time of position fix and status.....	28
2.7.7 GLQ.....	28
2.7.7.1 Poll a standard message (Talker ID GL).....	29
2.7.8 GNQ.....	29
2.7.8.1 Poll a standard message (Talker ID GN).....	29
2.7.9 GNS.....	29
2.7.9.1 GNSS fix data.....	29
2.7.10 GPQ.....	30
2.7.10.1 Poll a standard message (Talker ID GP).....	30

2.7.11 GQQ.....	31
2.7.11.1 Poll a standard message (Talker ID GQ).....	31
2.7.12 GRS.....	31
2.7.12.1 GNSS range residuals.....	31
2.7.13 GSA.....	32
2.7.13.1 GNSS DOP and active satellites.....	32
2.7.14 GST.....	32
2.7.14.1 GNSS pseudorange error statistics.....	33
2.7.15 GSV.....	33
2.7.15.1 GNSS satellites in view.....	33
2.7.16 RLM.....	34
2.7.16.1 Return link message (RLM).....	34
2.7.17 RMC.....	35
2.7.17.1 Recommended minimum data.....	35
2.7.18 THS.....	35
2.7.18.1 True heading and status.....	35
2.7.19 TXT.....	36
2.7.19.1 Text transmission.....	36
2.7.20 VTG.....	37
2.7.20.1 Course over ground and ground speed.....	37
2.7.21 ZDA.....	37
2.7.21.1 Time and date.....	37
2.8 Secondary output messages.....	38
2.8.1 GGA.....	38
2.8.1.1 Global positioning system fix data.....	38
2.8.2 GLL.....	39
2.8.2.1 Latitude and longitude, with time of position fix and status.....	39
2.8.3 GNS.....	40
2.8.3.1 GNSS fix data.....	40
2.8.4 GSA.....	41
2.8.4.1 GNSS DOP and active satellites.....	41
2.8.5 RMC.....	42
2.8.5.1 Recommended minimum data.....	42
2.8.6 VTG.....	43
2.8.6.1 Course over ground and ground speed.....	43
2.8.7 ZDA.....	43
2.8.7.1 Time and date.....	44
2.9 PUBX messages.....	44
2.9.1 CONFIG (PUBX,41).....	44
2.9.1.1 Set protocols and baud rate.....	44
2.9.2 POSITION (PUBX,00).....	45
2.9.2.1 Poll a PUBX,00 message.....	45
2.9.2.2 Lat/Long position data.....	45
2.9.3 RATE (PUBX,40).....	46
2.9.3.1 Set NMEA message output rate.....	46
2.9.4 SVSTATUS (PUBX,03).....	47
2.9.4.1 Poll a PUBX,03 message.....	47
2.9.4.2 Satellite status.....	48
2.9.5 TIME (PUBX,04).....	48
2.9.5.1 Poll a PUBX,04 message.....	48

2.9.5.2 Time of day and clock information.....	49
<b>3 UBX protocol.....</b>	<b>50</b>
3.1 UBX protocol key features.....	50
3.2 UBX frame structure.....	50
3.3 UBX payload definition rules.....	51
3.3.1 UBX structure packing.....	51
3.3.2 UBX reserved elements.....	51
3.3.3 UBX undefined values.....	51
3.3.4 UBX conditional values.....	51
3.3.5 UBX data types.....	51
3.3.6 UBX fields scale and unit.....	52
3.3.7 UBX repeated fields.....	52
3.3.8 UBX payload decoding.....	53
3.4 UBX checksum.....	53
3.5 UBX message flow.....	53
3.5.1 UBX acknowledgement.....	53
3.5.2 UBX polling mechanism.....	53
3.6 GNSS, satellite, and signal numbering.....	54
3.7 UBX message example.....	54
3.8 UBX messages overview.....	55
3.9 UBX-ACK (0x05).....	58
3.9.1 UBX-ACK-ACK (0x05 0x01).....	58
3.9.1.1 Message acknowledged.....	58
3.9.2 UBX-ACK-NAK (0x05 0x00).....	59
3.9.2.1 Message not acknowledged.....	59
3.10 UBX-CFG (0x06).....	59
3.10.1 UBX-CFG-CFG (0x06 0x09).....	59
3.10.1.1 Clear, save and load configurations.....	59
3.10.2 UBX-CFG-RST (0x06 0x04).....	60
3.10.2.1 Reset receiver / Clear backup data structures.....	60
3.10.3 UBX-CFG-SPT (0x06 0x64).....	61
3.10.3.1 Configure and start a sensor production test.....	61
3.10.4 UBX-CFG-VALDEL (0x06 0x8c).....	61
3.10.4.1 Delete configuration item values.....	61
3.10.4.2 Delete configuration item values (with transaction).....	62
3.10.5 UBX-CFG-VALGET (0x06 0x8b).....	63
3.10.5.1 Get configuration items.....	63
3.10.5.2 Configuration items.....	64
3.10.6 UBX-CFG-VALSET (0x06 0x8a).....	65
3.10.6.1 Set configuration item values.....	65
3.10.6.2 Set configuration item values (with transaction).....	65
3.11 UBX-ESF (0x10).....	67

# 1 General information

## 1.1 Document overview

This document describes the interface of the u-blox M9 multi-mode dead reckoning (MDR) GNSS firmware. The interface consists of the following parts:

- [NMEA protocol](#)
- [UBX protocol](#)
- [Configuration interface](#)

Some of the features described here may not be available in the receiver, and some may require specific configurations to be enabled. See the applicable data sheet for availability of the features and the integration manual for instructions for enabling them.

Previous versions of u-blox receiver documentation combined general receiver description and interface specification. In the current documentation the receiver description is included in the integration manual.

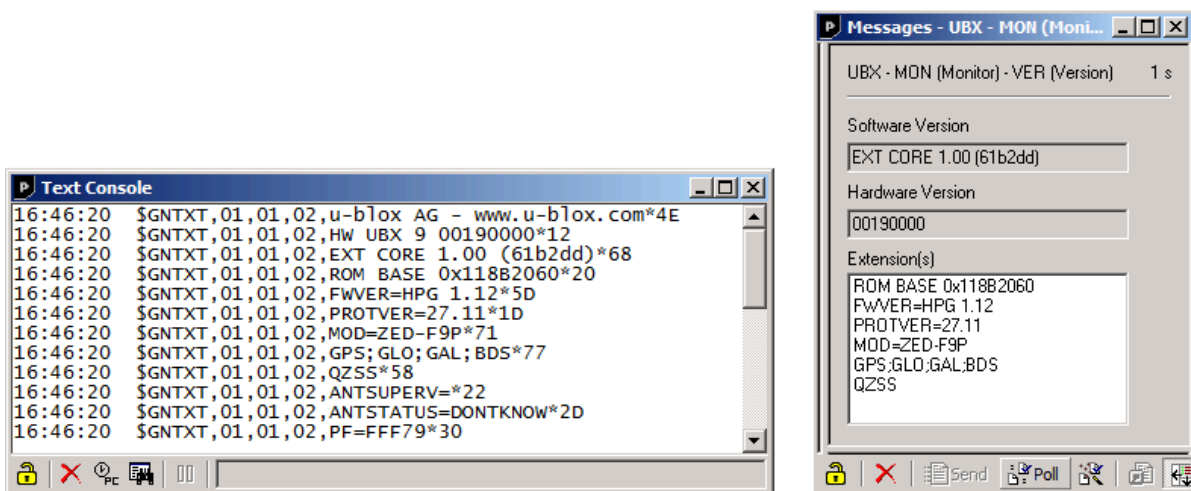

See also [Related documents](#).

## 1.2 Firmware and protocol versions

u-blox generation 9 receivers execute firmware from internal ROM or from internal code-RAM. If the firmware image is stored in a flash it is loaded into the code-RAM before execution. It is also possible to store the firmware image in the host system. The firmware is then loaded into the code-RAM from the host processor. (Loading the firmware from the host processor is not supported in all products.) If there is no external firmware image, then the firmware is executed from the ROM.

The location and the version of the boot loader and the currently running firmware can be found in the boot screen and in the [UBX-MON-VER](#) message. If the firmware has been loaded from a connected flash or from the host processor, it is indicated by text "EXT". When the receiver is started, the boot screen is output automatically in [UBX-INF-NOTICE](#) or [NMEA-Standard-TXT](#) messages if configured using [CFG-INFMSG](#). The UBX-MON-VER message can be polled using the [UBX polling mechanism](#).

The following u-center screenshots show an example of a u-blox receiver running firmware loaded from flash:

The following information is available (✓) from the boot screen (**B**) and the UBX-MON-VER message (**M**):

<b>B</b>	<b>M</b>	<b>Example</b>	<b>Information</b>
✓		u-blox AG - www.u-blox.com	Start of the boot screen.
✓		HW UBX 9 00190000	Hardware version of the u-blox receiver.
	✓	00190000	
✓	✓	EXT CORE 1.00 (61b2dd)	Base (CORE) firmware version and revision number, loaded from external memory (EXT).
		EXT LAP 1.00 (12a3bc)	Product firmware version and revision number, loaded from external memory (EXT). Available only in some firmware versions. See below for a list of product acronyms.
✓	✓	ROM BASE 0x118B2060	Revision number of the underlying boot loader firmware in ROM.
✓	✓	FWVER=HPG 1.12	Product firmware version number, where: <ul style="list-style-type: none"> <li>• SPG = Standard precision GNSS product</li> <li>• HPG = High precision GNSS product</li> <li>• ADR = Automotive dead reckoning product</li> <li>• TIM = Time sync product</li> <li>• LAP = Lane accurate positioning product</li> <li>• HPS = High precision sensor fusion product</li> <li>• DBS = Dual band standard precision</li> <li>• MDR = Multi-mode dead reckoning product</li> <li>• PMP = L-Band Inmarsat point-to-multipoint receiver</li> <li>• QZS = QZSS L6 centimeter level augmentation service (CLAS) message receiver</li> <li>• DBD = Dual band dead reckoning product</li> <li>• LDR = ROM bootloader, no GNSS functionality</li> </ul>
✓	✓	PROTVER=34.00	Supported protocol version.
✓	✓	MOD=ZED-F9P	Module name (if available).
✓	✓	GPS;GLO;GAL;BDS	List of supported major GNSS (see <a href="#">GNSS identifiers</a> ).
✓	✓	SBAS;QZSS	List of supported augmentation systems (see <a href="#">GNSS identifiers</a> ).
✓		ANTSUPERV=AC SD PDoS SR	Configuration of the antenna supervisor (if available), where: <ul style="list-style-type: none"> <li>• AC = Active antenna control enabled</li> <li>• SD = Short circuit detection enabled</li> <li>• OD = Open circuit detection enabled</li> <li>• PDoS = Short circuit power down logic enabled</li> <li>• SR = Automatic recovery from short state enabled</li> </ul>
✓		PF=FFF79	Product configuration.
✓		BD=E01C	GNSS band configuration.

 The "FWVER" product firmware version indicates which firmware is currently running. This is referred to as "firmware version" in this and other documents.

 The revision numbers should only be used to identify a known firmware version. They are not necessarily numeric nor are they guaranteed to increase with newer firmware versions.

 Similarly, firmware version numbers can have additional non-numeric information appended, such as in "5.00B03".

 Not every entry is output by all u-blox receivers. The availability of some of the information depends on the product, the firmware location and the firmware version.

The product firmware version and the base firmware version relate to the protocol version:

Product firmware version	Base firmware version	Protocol version
MDR 2.10	EXT CORE 1.00 (501c66)	35.10
MDR 2.15	EXT CORE 1.00 (71d265)	35.15
MDR 2.16	EXT CORE 1.00 (add159)	35.16

## 1.3 Receiver configuration

u-blox positioning receivers are fully configurable with UBX protocol messages. The configuration used by the receiver during normal operation is called the "current configuration". The current configuration can be changed during normal operation by sending [UBX-CFG-VALSET](#) messages over any I/O port. The receiver will change its current configuration immediately after receiving a configuration message. The receiver will always use the current configuration only.

The current configuration is loaded from permanent configuration hard-coded in the receiver firmware (the defaults) and from non-volatile memory (user configuration) on startup of the receiver. Changes made to the current configuration at run-time will be lost when there is a power cycle, a hardware reset or a (complete) controlled software reset (see [Configuration reset behavior](#)).

See [Configuration interface](#) for a detailed description of the receiver configuration system, the explanation of the configuration concept and its principles and interfaces.

-  The configuration interface has changed from earlier u-blox positioning receivers. There is some backwards compatibility provided in [UBX-CFG](#) configuration messages. Users are strongly advised to only use the [Configuration interface](#). See also [Legacy UBX message fields reference](#).
-  See the integration manual for a basic receiver configuration most commonly used.

## 1.4 Message naming

Message names are written in full with the parts of the name separated by hyphens ("-"). The full message name consists of the protocol name (e.g., *UBX*), the class name (e.g. *NAV*) and the message name (e.g. *PVT*). For example the receiver software version information message is referred to as *UBX-MON-VER*. Similarly, the *NMEA-Standard-GGA* is the NMEA standard message (sentence) with the global positioning fix data.

References to fields of the message add the field name separated by a dot ("."), e.g. *UBX-MON-VER.swVersion*.

Some messages use a fourth level of naming, called the message version. One example is the *UBX-MGA-GPS* message for GPS assistance data, which exists in versions for ephemerides (*UBX-MGA-GPS-EPH*) and almanacs (*UBX-MGA-GPS-ALM*).

Names of configuration items are of the form *CFG-GROUP-ITEM*. For example, *CFG-NAVSPG-DYNMODEL* refers to the navigation dynamic platform model the receiver uses. Constants add a fourth level to the item name, such as *CFG-NAVSPG-DYNMODEL-AUTOMOT* for the automotive platform model. In the context of describing an item's value, only the last part of the constant name can be used (e.g. "set *CFG-NAVSPG-DYNMODEL* to *PORT* for portable applications").

## 1.5 GNSS, satellite, and signal identifiers

### 1.5.1 Overview

Many [UBX protocol](#) messages contain information about specific satellites. Any single satellite can be identified by a `gnssId` field indicating the GNSS the satellite is part of and an `svId` (SV for space vehicle) field indicating the number of the satellite in that system. Usually, the `svId` is the

native number associated with the satellite in the specific GNSS. For example the GLONASS SV4 is identified as `gnssId` 6, `svId` 4, while the GPS SV4 is `gnssId` 0, `svId` 4.

Some legacy UBX protocol messages combine both the satellite number and the GNSS identification into a one-byte (type U1) field. See the single `svId` mapping in [Satellite identifiers](#) to identify the corresponding GNSS and satellite.

GLONASS satellites can be tracked before they have been identified. In UBX messages, the unknown satellites will be reported with `svId` 255. In NMEA messages, the unknown satellites will be null (empty) fields. Product-related documentation and u-center will use R? to label unidentified GLONASS satellites.

Signal identifiers are used when different signals from the same GNSS satellite need to be distinguished (e.g. in the [UBX-NAV-SIG](#) message). A separate `sigId` field identifies the signal. These signal identifiers are only valid when combined with a GNSS identifier (`gnssId` field).

The [NMEA protocol](#) (version 4.10 and later) identifies GNSS satellites with a one-digit system ID and a two-digit satellite number. u-blox receivers support this method in their NMEA output when "strict" SV numbering is selected. In most cases this is the default setting, but it can be checked or changed using the [Configuration interface](#) (see also [NMEA GNSS, satellite, and signal numbering](#)).

In order to support some GNSS (e.g. BeiDou, Galileo, QZSS), which are not supported by some or all NMEA protocol versions, an "extended" SV numbering scheme can be enabled. This uses the NMEA-defined numbers where possible but adds other number ranges to support other GNSS. Note however that these non-standard extensions require 3-digit numbers, which may not be supported by some NMEA parsing software. For example, QZSS satellites use numbers in the range 193 to 202.

The NMEA standard defines signal identifiers to distinguish different signals sent by a single GNSS satellite (e.g. L2 CL and CM). u-blox positioning receivers use those identifiers for signal identification, as far as the corresponding standard is supported in a particular product.

Note that the following sections are a generic overview for different u-blox positioning receivers. A particular product may not support all of the described GNSS identifiers, satellite numbers, signal identifiers or combinations thereof.

## 1.5.2 GNSS identifiers

[Table 1](#) lists each GNSS along with the GNSS identifier ([UBX protocol](#)), the NMEA system identifiers ([NMEA protocol](#)), and abbreviations used in this document:

GNSS	Abbreviations		UBX <code>gnssId</code>	NMEA system ID		
				2.3 - 4.0	4.10	4.11
GPS	GPS	G	0	1	1	1
SBAS	SBAS	S	1	1	1	1
Galileo	GAL	E	2	n/a	3	3
BeiDou	BDS	B	3	n/a	(4) <sup>1</sup>	4
QZSS	QZSS	Q	5	n/a	(1) <sup>1</sup>	5
GLONASS	GLO	R	6	2	2	2
NavIC	NavIC	N	7	n/a	n/a	6

**Table 1: GNSS identifiers**

<sup>1</sup> While not defined by NMEA 4.10, u-blox receivers in this mode will use system ID 4 for BeiDou and, if extended satellite numbering is enabled, system ID 1 for QZSS.

See also [NMEA Talker ID](#).

### 1.5.3 Satellite identifiers

The satellite numbering scheme for the [UBX protocol](#) is provided in [Table 2](#). The satellite numbering scheme for the [NMEA protocol](#) is provided in [Table 3](#).

GNSS	SV Range	gnssId:svId	single svid
GPS	G1-G32	0:1-32	1-32
SBAS	S120-S158	1:120-158	120-158
Galileo	E1-E36	2:1-36	211-246
BeiDou	B1-B5	3:1-5	159-163
	B6-B37	3:6-37	33-64
	B38-B63	3:38-63	n/a
QZSS	Q1-Q10	5:1-10	193-202
GLONASS	R1-R32	6:1-32	65-96
	R?	6:255	255
NavIC	N1-N7	7:1-7	247-253
	N8-N14	7:8-14	n/a

**Table 2: UBX protocol satellite numbering scheme**

GNSS	SV Range	NMEA 2.3 - 4.0		NMEA 4.10		NMEA 4.11	
		strict	extended	strict	extended	strict	extended
GPS	G1-G32	1-32	1-32	1-32	1-32	1-32	1-32
SBAS	S120-S158	33-64	33-64, 152-158	33-64	33-64, 152-158	33-64	33-64, 152-158
Galileo	E1-E36	n/a	301-336	1-36	1-36	1-36	1-36
BeiDou	B1-B5	n/a	401-405	1-5	1-5	1-5	1-5
	B6-B37	n/a	406-437	6-37	6-37	6-37	6-37
	B38-B63	n/a	438-463	38-63	38-63	38-63	38-63
QZSS	Q1-Q10	n/a	193-202	n/a	193-202	1-10	1-10
GLONASS	R1-R32	65-96	65-96	65-96	65-96	65-96	65-96
	R?	null	null	null	null	null	null
NavIC	N1-N7	n/a	n/a	n/a	n/a	1-7	1-7
	N8-N14	n/a	n/a	n/a	n/a	8-14	8-14

**Table 3: NMEA protocol satellite numbering scheme**

### 1.5.4 Signal identifiers

A summary of all the signal identification schemes used in the [NMEA protocol](#) and the [UBX protocol](#) is provided in the following table. (Only a subset of the signals is supported by each product.) In NMEA protocol, the system and signal identifiers are in hexadecimal format.

Signal	UBX Protocol		NMEA Protocol 4.10		NMEA Protocol 4.11	
	gnssId	sigId	System ID	Signal ID	System ID	Signal ID
GPS L1C/A <sup>2</sup>	0	0	1	1	1	1
GPS L2 CL	0	3	1	6	1	6

<sup>2</sup> UBX messages that do not have an explicit `sigId` field contain information about the subset of signals marked.

<sup>3</sup> While not defined by NMEA 4.10, u-blox receivers in this mode will use system ID 4 for BeiDou and, if extended satellite numbering is enabled, system ID 1 for QZSS.

<sup>4</sup> BeiDou and QZSS signal ID are not defined in the NMEA protocol version 4.10. Values shown in the table are only valid for u-blox products and, for QZSS signal ID, if extended satellite numbering is enabled.

Signal	UBX Protocol		NMEA Protocol 4.10		NMEA Protocol 4.11	
	gnssId	sigId	System ID	Signal ID	System ID	Signal ID
GPS L2 CM	0	4	1	5	1	5
GPS L5 I	0	6	1	7	1	7
GPS L5 Q	0	7	1	8	1	8
SBAS L1C/A <sup>2</sup>	1	0	1	1	1	1
Galileo E1 C <sup>2</sup>	2	0	3	7	3	7
Galileo E1 B <sup>2</sup>	2	1	3	7	3	7
Galileo E5 aI	2	3	3	1	3	1
Galileo E5 aQ	2	4	3	1	3	1
Galileo E5 bI	2	5	3	2	3	2
Galileo E5 bQ	2	6	3	2	3	2
BeiDou B1I D1 <sup>2</sup>	3	0	(4) <sup>3</sup>	(1) <sup>4</sup>	4	1
BeiDou B1I D2 <sup>2</sup>	3	1	(4) <sup>3</sup>	(1) <sup>4</sup>	4	1
BeiDou B2I D1	3	2	(4) <sup>3</sup>	(3) <sup>4</sup>	4	B
BeiDou B2I D2	3	3	(4) <sup>3</sup>	(3) <sup>4</sup>	4	B
BeiDou B1 Cp (pilot)	3	5	(4) <sup>3</sup>	N/A	4	3
BeiDou B1 Cd (data)	3	6	(4) <sup>3</sup>	N/A	4	3
BeiDou B2 ap (pilot)	3	7	(4) <sup>3</sup>	N/A	4	5
BeiDou B2 ad (data)	3	8	(4) <sup>3</sup>	N/A	4	5
QZSS L1C/A <sup>2</sup>	5	0	(1) <sup>3</sup>	(1) <sup>4</sup>	5	1
QZSS L1S	5	1	(1) <sup>3</sup>	(4) <sup>4</sup>	5	4
QZSS L2 CM	5	4	(1) <sup>3</sup>	(5) <sup>4</sup>	5	5
QZSS L2 CL	5	5	(1) <sup>3</sup>	(6) <sup>4</sup>	5	6
QZSS L5 I	5	8	(1) <sup>3</sup>	N/A	5	7
QZSS L5 Q	5	9	(1) <sup>3</sup>	N/A	5	8
GLONASS L1 OF <sup>2</sup>	6	0	2	1	2	1
GLONASS L2 OF	6	2	2	3	2	3
NavIC L5 A <sup>2</sup>	7	0	N/A	N/A	6	1

**Table 4: Signal identifiers**

## 1.6 Message types

The following message types are defined:

Message type	Description
Input	Messages that are input to the receiver and never output. E.g. <a href="#">UBX-MGA-GPS-EPH</a> .
Output	Messages that are output by the receiver in no particular interval and never input. E.g. <a href="#">UBX-ACK-ACK</a> .
Input/output	Messages that can be output by or input to the receiver. E.g. <a href="#">UBX-MGA-DBD-DATA0</a> .
Periodic	Messages that are output in regular intervals but cannot be polled. E.g. <a href="#">UBX-NAV-EOE</a> .
Periodic/polled	Messages that are output in regular intervals and can be polled. E.g. <a href="#">UBX-NAV-PVT</a> .
Command	Messages that are a command to the receiver. Similar to type <i>Input</i> these are input-only. E.g. <a href="#">UBX-CFG-RST</a> .

Message type	Description
Get	Output-only configuration or command messages. E.g. <a href="#">UBX-CFG-DAT</a> .
Set	Input-only configuration or command messages. E.g. <a href="#">UBX-CFG-VALDEL</a> .
Get/set	Input/output configuration or command messages. E.g. <a href="#">UBX-CFG-NAVX5</a> .
Polled	Non-periodic messages that can only be polled. E.g. <a href="#">UBX-MON-VER</a> .
Poll request	Poll request. E.g. <a href="#">UBX-MGA-DBD-POLL</a> .

## 2 NMEA protocol

The following sections give an overview of the NMEA messages used by u-blox positioning receivers.

By default, the NMEA messages sent by u-blox positioning receivers are based on the NMEA 0183 version 4.11 standard. For further information on the NMEA standard, refer to the *NMEA 0183 Standard for Interfacing Marine Electronic Devices*, Version 4.11, November 2018, which is available on <http://www.nmea.org/>.

### 2.1 NMEA frame structure

The following figure shows the structure of a NMEA protocol message (called "sentences" in the standard).

#### Example

\$	GP	ZDA	,141644.00,22,03,2002,00,00	*67	\r\n
----	----	-----	-----------------------------	-----	------

### 2.2 NMEA protocol configuration

The [NMEA protocol](#) on u-blox receivers can be configured for customer applications by using the [Configuration interface](#) (CFG-NMEA-\* items).

Several NMEA standard versions are supported. Version 4.11 (not in all products), 4.10, 4.00, 2.3, or 2.1 can be configured. See [Configuration defaults](#) for the default version. See [CFG-NMEA-PROTVER](#) to configure the version. See [NMEA multi-GNSS operation](#) and [NMEA data fields](#) for details on how this affects the output.

The following filtering flags can be used to configure the output of some NMEA message fields:

Filter	Configuration Item	Description
Position filtering	<a href="#">CFG-NMEA-OUT_INVFIX</a>	Enable to permit positions from failed or invalid fixes to be reported (with the "V" status flag to indicate that the data is not valid).
Valid position filtering	<a href="#">CFG-NMEA-OUT_MSKFIX</a>	Enable to permit positions from invalid fixes to be reported (with the "V" status flag to indicate that the data is not valid).
Time filtering	<a href="#">CFG-NMEA-OUT_INVTIME</a>	Enable to permit the receiver's best knowledge of time to be output, even though it might be wrong.

Filter	Configuration Item	Description
Date filtering	<a href="#">CFG-NMEA-OUT_INVDATE</a>	Enable to permit the receiver's best knowledge of date to be output, even though it might be wrong.
GPS-only filtering	<a href="#">CFG-NMEA-OUT_ONLYGPS</a>	Enable to restrict output to only report GPS satellites.
Track filtering	<a href="#">CFG-NMEA-OUT_FROZENCODG</a>	Enable to permit course over ground (COG) to be reported even when it would otherwise be frozen.

The following filtering flags can be used to configure the output of some NMEA message flags:

Mode	Configuration Item	Description
Compatibility mode	<a href="#">CFG-NMEA-COMPAT</a>	Some older NMEA applications expect the NMEA output to be formatted in a specific way, for example, they will only work if the latitude and longitude have exactly four digits behind the decimal point. u-blox receivers offer a compatibility mode to support these legacy applications.
Consideration mode	<a href="#">CFG-NMEA-CONSIDER</a>	u-blox receivers use a sophisticated signal quality detection scheme, in order to produce the best possible position output. This algorithm considers all SV measurements, and may eventually decide to only use a subset thereof, if it improves the overall position accuracy. If consideration mode is enabled, all satellites, which were considered for navigation, are communicated as being used for the position determination. If consideration mode is disabled, only those satellites which after the consideration step remained in the position output are marked as being used.
Limit length mode	<a href="#">CFG-NMEA-LIMIT82</a>	Enabling this mode will limit the NMEA sentence length to a maximum of 82 characters.
High precision mode	<a href="#">CFG-NMEA-HIGHPREC</a>	Enabling this mode increases precision of the position output. Latitude and longitude then have seven digits after the decimal point, and altitude has three digits after the decimal point. Note: The high precision mode cannot be set in conjunction with either compatibility mode or Limit82 mode.

The following extended configuration options are available:

Option	Configuration Item(s)	Description
GNSS to filter	<a href="#">CFG-NMEA-FILT_GPS</a> etc.	Filters satellites based on the GNSS they belong to.
Satellite numbering	<a href="#">CFG-NMEA-SVNUMBERING</a>	This field configures the display of satellites that do not have an NMEA-defined value. Note: this does not apply to satellites with an unknown ID. See also <a href="#">Satellite identifiers</a> .
Main Talker ID	<a href="#">CFG-NMEA-MAINTALKERID</a>	By default the main Talker ID (i.e. the Talker ID used for all messages other than GSV) is determined by the GNSS assignment of the receiver's channels (see configuration items <a href="#">CFG-SIGNAL*</a> ). This field enables the main Talker ID to be overridden. See also <a href="#">NMEA Talker ID</a> .
GSV Talker ID	<a href="#">CFG-NMEA-GSVTALKERID</a>	By default the Talker ID for GSV messages is GNSS-specific (as defined by NMEA). This field enables the GSV Talker ID to be overridden.
BDS Talker ID	<a href="#">CFG-NMEA-BDSTALKERID</a>	By default the Talker ID for BeiDou is "GB". This field enables the BeiDou Talker ID to be overridden.

## 2.3 NMEA-proprietary messages

The NMEA standard allows for proprietary, manufacturer-specific messages to be added. These shall be marked with a manufacturer mnemonic. The mnemonic assigned to u-blox is UBX and is used for all non-standard messages. These proprietary NMEA messages therefore have the address field set to PUBX. The first data field in a PUBX message identifies the message number with two digits.

## 2.4 NMEA multi-GNSS operation

Many applications that process NMEA messages assume that only a single GNSS is active. However, when multiple GNSS are configured, the NMEA specification requires the output to change in the following ways:

**Main Talker ID** The main [NMEA Talker ID](#) will be "GN" (e.g. instead of "GP" for a GPS-only receiver).

**GSV Talker IDs** The [GSV](#) message reports the signal strength of the visible satellites. However, the Talker ID it uses is specific to the GNSS it is reporting information for, so for a multi-GNSS receiver it will not be the same as the main Talker ID. While other messages use the "GN" Talker ID, the GSV message will use GNSS-specific Talker IDs. See also [NMEA protocol configuration](#).

**Multiple GSA and GRS messages** Multiple [GSA](#) and [GRS](#) messages are output for each fix, one for each GNSS. This may confuse applications that assume they are output only once per position fix (as is the case for a single GNSS receiver).

**GGA Talker IDs** The NMEA specification indicates that the GGA message is GPS-specific. However, u-blox receivers support the output of a GGA message for each of the Talker IDs.

**BeiDou and Galileo** Only NMEA version 4.10 and later have support for these systems.

**QZSS** Only NMEA version 4.11 and later have support for this system.

**Extended satellite numbering** In order to support some GNSS (e.g. BeiDou, Galileo, QZSS) that are not supported by some or all NMEA protocol versions, an "extended" SV numbering scheme can be enabled. This uses the NMEA-defined numbers where possible, but adds other number ranges to support other GNSS. Note however that these non-standard extensions require 3-digit numbers, which may not be supported by some NMEA parsing software. For example, QZSS satellites use numbers in the range 193 to 202. See [NMEA protocol configuration](#) and [Satellite identifiers](#).

## 2.5 NMEA data fields

Various data fields in NMEA messages depend on [NMEA protocol configuration](#) or require a definition for their interpretation.

### 2.5.1 NMEA Talker ID

One of the ways the NMEA standard differs depending on the GNSS is by using a two-letter message identifier, the "Talker ID". The specific Talker ID used by a u-blox receiver will depend on the product and its configuration. The table below shows the Talker ID that will be used for various GNSS configurations by default.

GNSS	Talker ID	Comments
GPS, SBAS	GP	NMEA 2.3+
GLONASS	GL	NMEA 2.3+
Galileo	GA	NMEA 4.10+
BeiDou	GB	NMEA 4.10+ (official NMEA only since 4.11)
NavIC	GI	NMEA 4.11+
QZSS	GQ	NMEA 4.11+ (GP for NMEA 2.3 - 4.10)
Any combination of GNSS	GN	

### 2.5.2 NMEA extra fields

The following extra fields are available in NMEA 4.10 and later.

Message	Extra fields
NMEA-Standard-GBS	systemId and signalId
NMEA-Standard-GNS	navStatus
NMEA-Standard-GRS	systemId and signalId
NMEA-Standard-GSA	systemId
NMEA-Standard-GSV	signalId
NMEA-Standard-RMC	navStatus

### 2.5.3 NMEA latitude and longitude format

According to the NMEA standard, latitude and longitude are output in the format *degrees, minutes and (decimal) fractions of minutes*. To convert to *degrees and fractions of degrees, or degrees, minutes, seconds and fractions of seconds*, the *minutes and fractional minutes* parts need to be converted. For example:

Format	Latitude	Longitude
Receiver output	\$GNRMC,014230.00,A,4722.80340,N,00831.68218,E,0.000,,120477,,,A,V*14	
(d)ddmm.mmmmm	4722.80340 North	00831.68218 East
Degrees and minutes	47 degrees, 22.80340 minutes	8 degrees, 31.68218 minutes
Degrees	47.38005667 degrees	8.52803633 degrees
Degrees, minutes and seconds	47 degrees, 22 minutes, 48.2040 seconds	8 degrees, 31 minutes, 40.9308 seconds

### 2.5.4 NMEA GNSS, satellite, and signal numbering

See [GNSS, satellite, and signal identifiers](#) for details on how GNSS, satellites and signals are numbered in the NMEA protocol.

NMEA defines satellite numbering systems for some, but not all GNSS. The exact behavior depends on the configured NMEA protocol version and ("extended" or "strict") mode. See [NMEA protocol configuration](#) for details.

### 2.5.5 NMEA position fix flags

This section shows how u-blox positioning receivers implement the NMEA protocol and the conditions determining how flags are set.

The following flags are used in NMEA 4.10 and later.

NMEA Message	GLL, RMC	GGA	GLL, VTG	RMC, GNS
Field	status <sup>5</sup>	quality <sup>6</sup>	posMode <sup>7</sup>	posMode <sup>7</sup>
No position fix (at power-up, after losing satellite lock)	V	0	N	N
GNSS fix, but user limits exceeded	V	0	N	N
Dead reckoning fix, but user limits exceeded	V	6	E	E
Dead reckoning fix	A	6	E	E
RTK float	A	5	D	F
RTK fixed	A	4	D	R

<sup>5</sup> Possible *status* values: V = data invalid, A = data valid

<sup>6</sup> Possible values for *quality*: 0 = No fix, 1 = autonomous GNSS fix, 2 = differential GNSS fix, 4 = RTK fixed, 5 = RTK float, 6 = estimated/dead reckoning fix

<sup>7</sup> Possible values for *posMode*: N = No fix, E = estimated/dead reckoning fix, A = autonomous GNSS fix, D = differential GNSS fix, F = RTK float, R = RTK fixed. In NMEA GNS, u-blox uses a non-standard implementation where same single status is reported for all enabled and not filtered out constellations.

NMEA Message	GLL, RMC	GGA	GLL, VTG	RMC, GNS
Field	status <sup>5</sup>	quality <sup>6</sup>	posMode <sup>7</sup>	posMode <sup>7</sup>
2D GNSS fix	A	1 / 2	A / D	A / D
3D GNSS fix	A	1 / 2	A / D	A / D
Combined GNSS/dead reckoning fix	A	1 / 2	A / D	A / D

In high precision GNSS (HPG) products it is recommended to select NMEA version 4.10 or above. Earlier versions do not support the float RTK (F) and real time kinematic (R) mode indicator flags in all messages.

The following flags are used in NMEA 2.3 - 4.0.

NMEA Message	GLL, RMC	GGA	GSA	GLL, VTG, RMC, GNS
Field	status <sup>8</sup>	quality <sup>9</sup>	navMode <sup>10</sup>	posMode <sup>11</sup>
No position fix (at power-up, after losing satellite lock)	V	0	1	N
GNSS fix, but user limits exceeded	V	0	1	N
Dead reckoning fix, but user limits exceeded	V	6	2	E
Dead reckoning fix	A	6	2	E
2D GNSS fix	A	1 / 2	2	A / D
3D GNSS fix	A	1 / 2	3	A / D
Combined GNSS/dead reckoning fix	A	1 / 2	3	A / D

The flags in NMEA 2.1 and earlier are the same as NMEA 2.3 but with the following differences:

- The *posMode* field is not output for GLL, RMC and VTG messages (each message has one field less).
- The GGA *quality* field is set to 1 (instead of 6) for both types of dead reckoning fix.

## 2.5.6 NMEA output of invalid or unknown data

By default the receiver will not output invalid data. In such cases, it will output empty fields. See [NMEA protocol configuration](#) for options to adjust this behavior.

A valid position fix is reported as follows:

```
$GPGLL,4717.11634,N,00833.91297,E,124923.00,A,A*6E
```

An invalid position fix (but valid time) is reported as follows:

```
$GPGLL,,,,,124924.00,V,N*42
```

If the time is unknown (e.g. during a cold start):

```
$GPGLL,,,,,,V,N*64
```

Unlike the NMEA standard behavior to invalid data, dead reckoning products always report a position. It is marked as invalid (V) when the user limits are exceeded or valid (A) if the user limits are met.

<sup>8</sup> Possible values for *status*: V = data invalid, A = data valid

<sup>9</sup> Possible values for *quality*: 0 = no fix, 1 = autonomous GNSS fix, 2 = differential GNSS fix, 4 = RTK fixed, 5 = RTK float, 6 = estimated/dead reckoning fix

<sup>10</sup> Possible values for *navMode*: 1 = No fix, 2 = 2D fix, 3 = 3D fix

<sup>11</sup> Possible values for *posMode*: N = No fix, E = estimated/dead reckoning fix, A = autonomous GNSS fix, D = differential GNSS fix. In NMEA GNS, u-blox uses a non-standard implementation where same single status is reported for all enabled and not filtered out constellations.

## 2.6 NMEA messages overview

<b>Message</b>	<b>Class/ID</b>	<b>Description (Type)</b>
<b>NMEA-Standard – Standard NMEA messages</b>		
NMEA-Standard-DTM	0xf0 0x0a	• Datum reference (Output)
NMEA-Standard-GAQ	0xf0 0x45	• Poll a standard message (Talker ID GA) (Poll request)
NMEA-Standard-GBQ	0xf0 0x44	• Poll a standard message (Talker ID GB) (Poll request)
NMEA-Standard-GBS	0xf0 0x09	• GNSS satellite fault detection (Output)
NMEA-Standard-GGA	0xf0 0x00	• Global positioning system fix data (Output)
NMEA-Standard-GLL	0xf0 0x01	• Latitude and longitude, with time of position fix and status (Output)
NMEA-Standard-GLQ	0xf0 0x43	• Poll a standard message (Talker ID GL) (Poll request)
NMEA-Standard-GNQ	0xf0 0x42	• Poll a standard message (Talker ID GN) (Poll request)
NMEA-Standard-GNS	0xf0 0x0d	• GNSS fix data (Output)
NMEA-Standard-GPQ	0xf0 0x40	• Poll a standard message (Talker ID GP) (Poll request)
NMEA-Standard-GQQ	0xf0 0x47	• Poll a standard message (Talker ID GQ) (Poll request)
NMEA-Standard-GRS	0xf0 0x06	• GNSS range residuals (Output)
NMEA-Standard-GSA	0xf0 0x02	• GNSS DOP and active satellites (Output)
NMEA-Standard-GST	0xf0 0x07	• GNSS pseudorange error statistics (Output)
NMEA-Standard-GSV	0xf0 0x03	• GNSS satellites in view (Output)
NMEA-Standard-RLM	0xf0 0x0b	• Return link message (RLM) (Output)
NMEA-Standard-RMC	0xf0 0x04	• Recommended minimum data (Output)
NMEA-Standard-THS	0xf0 0x0e	• True heading and status (Output)
NMEA-Standard-TXT	0xf0 0x41	• Text transmission (Output)
NMEA-Standard-VTG	0xf0 0x05	• Course over ground and ground speed (Output)
NMEA-Standard-ZDA	0xf0 0x08	• Time and date (Output)
<b>NMEA-NAV2 – Secondary output NMEA messages</b>		
NMEA-NAV2-GGA	0xf7 0x00	• Global positioning system fix data (Output)
NMEA-NAV2-GLL	0xf7 0x01	• Latitude and longitude, with time of position fix and status. (Output)
NMEA-NAV2-GNS	0xf7 0x0d	• GNSS fix data (Output)
NMEA-NAV2-GSA	0xf7 0x02	• GNSS DOP and active satellites (Output)
NMEA-NAV2-RMC	0xf7 0x04	• Recommended minimum data (Output)
NMEA-NAV2-VTG	0xf7 0x05	• Course over ground and ground speed (Output)
NMEA-NAV2-ZDA	0xf7 0x08	• Time and date (Output)
<b>NMEA-PUBX – u-blox proprietary NMEA messages</b>		
NMEA-PUBX-CONFIG	0xf1 0x41	• Set protocols and baud rate (Set)
NMEA-PUBX-POSITION	0xf1 0x00	• Poll a PUBX,00 message (Poll request) • Lat/Long position data (Output)
NMEA-PUBX-RATE	0xf1 0x40	• Set NMEA message output rate (Set)
NMEA-PUBX-SVSTATUS	0xf1 0x03	• Poll a PUBX,03 message (Poll request) • Satellite status (Output)
NMEA-PUBX-TIME	0xf1 0x04	• Poll a PUBX,04 message (Poll request) • Time of day and clock information (Output)

## 2.7 Standard messages

Standard NMEA messages as defined by the NMEA 0183 standard. See [NMEA protocol](#) for details.

### 2.7.1 DTM

#### 2.7.1.1 Datum reference

Message	NMEA-Standard-DTM Datum reference				
Type	Output				
Comment	This message gives the difference between the current datum and the reference datum. The current datum is set to WGS84 by default. The reference datum cannot be changed and is always set to WGS84.				
Information	Class/ID: 0xF0 0x0a		Number of fields: 11		
Structure	\$xxDTM, datum, subDatum, lat, NS, lon, EW, alt, refDatum*cs\r\n				
Examples	\$GPDTM, W84, , 0.0, N, 0.0, E, 0.0, W84*6F\r\n \$GPDTM, 999, , 0.08, N, 0.07, E, -47.7, W84*1C\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxDTM	string	-	\$GPDTM	DTM Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	datum	string	-	W84	Local datum code: W84 = WGS84, P90 = PZ90, 999 = user-defined
2	subDatum	string	-	-	A null field (or a string describing the currently selected datum for protocol versions less than 14.00)
3	lat	numeric	min	0.08	Offset in Latitude
4	NS	character	-	S	North/South indicator
5	lon	numeric	min	0.07	Offset in Longitude
6	EW	character	-	E	East/West indicator
7	alt	numeric	m	-2.8	Offset in altitude
8	refDatum	string	-	W84	Reference datum code: W84 (WGS 84, fixed field)
9	cs	hexadecimal	-	*67	Checksum
10	CRLF	character	-	-	Carriage return and line feed

### 2.7.2 GAQ

#### 2.7.2.1 Poll a standard message (Talker ID GA)

Message	NMEA-Standard-GAQ Poll a standard message (Talker ID GA)				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GA.				
Information	Class/ID: 0xF0 0x45		Number of fields: 4		
Structure	\$xxGAQ, msgId*cs\r\n				
Example	\$EIGAQ, RMC*2B\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description

0	xxGAQ	string	-	\$EIGAQ	GAQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*2B	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.3 GBQ

### 2.7.3.1 Poll a standard message (Talker ID GB)

<b>Message</b>	<b>NMEA-Standard-GBQ</b> <b>Poll a standard message (Talker ID GB)</b>				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GB				
Information	Class/ID: 0xF0 0x44		Number of fields: 4		
Structure	\$xxGBQ,msgId*cs\r\n				
Example	\$EIGBQ,RMC*28\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGBQ	string	-	\$EIGBQ	GBQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*28	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.4 GBS

### 2.7.4.1 GNSS satellite fault detection

<b>Message</b>	<b>NMEA-Standard-GBS</b> <b>GNSS satellite fault detection</b>				
Type	Output				
Comment	<p>This message outputs the results of the Receiver Autonomous Integrity Monitoring Algorithm (RAIM).</p> <ul style="list-style-type: none"> <li>The fields <b>errLat</b>, <b>errLon</b> and <b>errAlt</b> output the standard deviation of the position calculation, using all satellites that pass the RAIM test successfully.</li> <li>The fields <b>errLat</b>, <b>errLon</b> and <b>errAlt</b> are only output if the RAIM process passed successfully (i.e. no or successful edits happened). These fields are never output if 4 or fewer satellites are used for the navigation calculation (because, in such cases, integrity cannot be determined by the receiver autonomously).</li> <li>The fields <b>prob</b>, <b>bias</b> and <b>stdev</b> are only output if at least one satellite failed in the RAIM test.</li> </ul> <p>If more than one satellites fail the RAIM test, only the information for the worst satellite is output in this message.</p>				
Information	Class/ID: 0xF0 0x09		Number of fields: 13		
Structure	\$xxGBS,time,errLat,errLon,errAlt,svid,prob,bias,stddev,systemId,signalId*cs\r\n				
Examples	\$GPGBS,235503.00,1.6,1.4,3.2,,,,,*40\r\n \$GPGBS,235458.00,1.4,1.3,3.1,03,,,-21.4,3.8,1,0*5B\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGBS	string	-	\$GPGBS	GBS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )

1	time	hhmmss.ss	-	235503.00	UTC time to which this RAIM sentence belongs. See section UTC representation in the integration manual for details.
2	errLat	numeric	m	1.6	Expected error in latitude
3	errLon	numeric	m	1.4	Expected error in longitude
4	errAlt	numeric	m	3.2	Expected error in altitude
5	svid	numeric	-	03	Satellite ID of most likely failed satellite
6	prob	numeric	-	-	Probability of missed detection: null (not supported, fixed field)
7	bias	numeric	m	-21.4	Estimated bias of most likely failed satellite (a priori residual)
8	stddev	numeric	m	3.8	Standard deviation of estimated bias
9	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
10	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
11	cs	hexadecimal	-	*5B	Checksum
12	CRLF	character	-	-	Carriage return and line feed

## 2.7.5 GGA

### 2.7.5.1 Global positioning system fix data

<b>Message</b>	<b>NMEA-Standard-GGA</b> <b>Global positioning system fix data</b>				
<b>Type</b>	Output				
<b>Comment</b>	Time and position, together with GPS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.).   The output of this message is dependent on the currently selected datum (default: WGS84). The NMEA specification indicates that the GGA message is GPS-specific. However, when the receiver is configured for multi-GNSS, the GGA message contents will be generated from the multi-GNSS solution. For multi-GNSS use, it is recommended that the <a href="#">NMEA-GNS</a> message is used instead.				
<b>Information</b>	Class/ID: 0xF0 0x00		Number of fields: 17		
<b>Structure</b>	\$xxGGA,time,lat,NS,lon,EW,quality,numSV,HDOP,alt,altUnit,sep,sepUnit,diffAge,diffStation*cs\r\n				
<b>Example</b>	\$GPGGA,092725.00,4717.11399,N,00833.91590,E,1,08,1.01,499.6,M,48.0,M,,*5B\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxGGA	string	-	\$GPGGA	GGA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	092725.00	UTC time. See section UTC representation in the integration manual for details.
2	lat	ddmm.mmmmm	-	4717.11399	Latitude (degrees and minutes), see <a href="#">format description</a>
3	NS	character	-	N	North/South indicator
4	lon	dddmm.mmmmm	-	00833.91590	Longitude (degrees and minutes), see <a href="#">format description</a>
5	EW	character	-	E	East/West indicator
6	quality	digit	-	1	Quality indicator for position fix, see <a href="#">position fix flags description</a>

7	numSV	numeric	-	08	Number of satellites used (range: 0-12)
8	HDOP	numeric	-	1.01	Horizontal Dilution of Precision
9	alt	numeric	m	499.6	Altitude above mean sea level
10	altUnit	character	-	M	Altitude units: M (meters, fixed field)
11	sep	numeric	m	48.0	Geoid separation: difference between ellipsoid and mean sea level
12	sepUnit	character	-	M	Geoid separation units: M (meters, fixed field)
13	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
14	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
15	cs	hexadecimal	-	*5B	Checksum
16	CRLF	character	-	-	Carriage return and line feed

## 2.7.6 GLL

### 2.7.6.1 Latitude and longitude, with time of position fix and status

<b>Message</b>	<b>NMEA-Standard-GLL</b> <b>Latitude and longitude, with time of position fix and status</b>				
<b>Type</b>	Output				
<b>Comment</b>	 The output of this message is dependent on the currently selected datum (default: WGS84)				
<b>Information</b>	Class/ID: 0xf0 0x01		Number of fields: 10		
<b>Structure</b>	\$xxGLL, lat, NS, lon, EW, time, status, posMode*cs\r\n				
<b>Example</b>	\$GPGLL, 4717.11364, N, 00833.91565, E, 092321.00, A, A*60\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxGLL	string	-	\$GPGLL	GLL Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	lat	ddmm. mmmm	-	4717.11364	Latitude (degrees and minutes), see <a href="#">format description</a>
2	NS	character	-	N	North/South indicator
3	lon	dddmm. mmmm	-	00833.91565	Longitude (degrees and minutes), see <a href="#">format description</a>
4	EW	character	-	E	East/West indicator
5	time	hhmmss.ss	-	092321.00	UTC time. See section UTC representation in the integration manual for details.
6	status	character	-	A	Data validity status, see <a href="#">position fix flags description</a>
7	posMode	character	-	A	Positioning mode, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
8	cs	hexadecimal	-	*60	Checksum
9	CRLF	character	-	-	Carriage return and line feed

## 2.7.7 GLQ

### 2.7.7.1 Poll a standard message (Talker ID GL)

<b>Message</b>	<b>NMEA-Standard-GLQ</b> <b>Poll a standard message (Talker ID GL)</b>				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GL				
Information	Class/ID: 0xf0 0x43		Number of fields: 4		
Structure	\$xxGLQ,msgId*cs\r\n				
Example	\$EIGLQ,RMC*3A\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGLQ	string	-	\$EIGLQ	GLQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*3A	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.8 GNQ

### 2.7.8.1 Poll a standard message (Talker ID GN)

<b>Message</b>	<b>NMEA-Standard-GNQ</b> <b>Poll a standard message (Talker ID GN)</b>				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GN				
Information	Class/ID: 0xf0 0x42		Number of fields: 4		
Structure	\$xxGNQ,msgId*cs\r\n				
Example	\$EIGNQ,RMC*3A\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGNQ	string	-	\$EIGNQ	GNQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*3A	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.9 GNS

### 2.7.9.1 GNSS fix data

<b>Message</b>	<b>NMEA-Standard-GNS</b> <b>GNSS fix data</b>				
Type	Output				
Comment	Time and position, together with GNSS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.). <a href="#">🔗</a> The output of this message is dependent on the currently selected datum (default: WGS84)				
Information	Class/ID: 0xf0 0x0d		Number of fields: 16		
Structure	\$xxGNS,time,lat,NS,lon,EW,posMode,numSV,HDOP,alt,sep,diffAge,diffStation,navStatus*cs\r\n				

**Examples** \$GNGNS,103600.01,5114.51176,N,00012.29380,W,ANNN,07,1.18,111.5,45.6,,,V\*00\r\n  
 \$GNGNS,122310.2,3722.425671,N,12258.856215,W,DAAA,14,0.9,1005.543,6.5,,,V\*0E\r\n  
 \$GPGNS,122310.2,,,,,07,,,,5.2,23,V\*02\r\n

**Payload:**

Field	Name	Format	Unit	Example	Description
0	xxGNS	string	-	\$GPGNS	GNS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	091547.00	UTC time. See section UTC representation in the integration manual for details.
2	lat	ddmm.mmmmm	-	5114.50897	Latitude (degrees and minutes), see <a href="#">format description</a>
3	NS	character	-	N	North/South indicator
4	lon	dddmm.mmmmm	-	00012.28663	Longitude (degrees and minutes), see <a href="#">format description</a>
5	EW	character	-	E	East/West indicator
6	posMode	character	-	AAAA	Positioning mode, see <a href="#">position fix flags description</a> . Four first characters are in the following order for GPS, GLONASS, Galileo and BeiDou. In NMEA GNS, u-blox uses a non-standard implementation where same single status is reported for all enabled and not filtered out constellations.
7	numSV	numeric	-	10	Number of satellites used (range: 0-99)
8	HDOP	numeric	-	0.83	Horizontal Dilution of Precision
9	alt	numeric	m	111.1	Altitude above mean sea level
10	sep	numeric	m	45.6	Geoid separation: difference between ellipsoid and mean sea level
11	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
12	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
13	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
14	cs	hexadecimal	-	*71	Checksum
15	CRLF	character	-	-	Carriage return and line feed

## 2.7.10 GPQ

### 2.7.10.1 Poll a standard message (Talker ID GP)

<b>Message</b>	<b>NMEA-Standard-GPQ</b> <b>Poll a standard message (Talker ID GP)</b>	
<b>Type</b>	Poll request	
<b>Comment</b>	Polls a standard NMEA message if the current Talker ID is GP	
<b>Information</b>	<i>Class/ID: 0xf0 0x40</i>	<i>Number of fields: 4</i>
<b>Structure</b>	\$xxGPQ,msgId*cs\r\n	
<b>Example</b>	\$EIGPQ,RMC*3A\r\n	

**Payload:**

Field	Name	Format	Unit	Example	Description
-------	------	--------	------	---------	-------------

0	xxGPQ	string	-	\$EIGPQ	GPQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*3A	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.11 GQQ

### 2.7.11.1 Poll a standard message (Talker ID GQ)

<b>Message</b>	<b>NMEA-Standard-GQQ</b> <b>Poll a standard message (Talker ID GQ)</b>				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GQ				
Information	Class/ID: 0xf0 0x47		Number of fields: 4		
Structure	\$xxGQQ,msgId*cs\r\n				
Example	\$EIGQQ,RMC*3A\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGQQ	string	-	\$EIGQQ	GQQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*3A	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.12 GRS

### 2.7.12.1 GNSS range residuals

<b>Message</b>	<b>NMEA-Standard-GRS</b> <b>GNSS range residuals</b>				
Type	Output				
Comment	If less than 12 SVs are available, the remaining fields are output empty. If more than 12 SVs are used, only the residuals of the first 12 SVs are output, in order to remain consistent with the NMEA standard. <b>In a multi-GNSS system this message will be output multiple times, once for each GNSS.</b>  This message relates to associated <a href="#">GGA</a> and <a href="#">GSA</a> messages.				
Information	Class/ID: 0xf0 0x06		Number of fields: 19		
Structure	\$xxGRS,time,mode{,residual},systemId,signalId*cs\r\n				
Examples	\$GNGRS,104148.00,1,2.6,2.2,-1.6,-1.1,-1.7,-1.5,5.8,1.7,,,,,1,1*52\r\n \$GNGRS,104148.00,1,,0.0,2.5,0.0,,2.8,,,,,,1,5*52\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGRS	string	-	\$GPGRS	GRS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	082632.00	UTC time of associated position fix. See section UTC representation in the integration manual for details.
2	mode	digit	-	1	Computation method used: <ul style="list-style-type: none"> <li>1 = Residuals were recomputed after the <a href="#">GGA</a> position was computed (fixed)</li> </ul>

Start of repeated group (12 times)

3 + n	residual	numeric	m	0.54	Range residuals for SVs used in navigation. The SV order matches the order from the <a href="#">GSA</a> sentence
-------	----------	---------	---	------	------------------------------------------------------------------------------------------------------------------

End of repeated group (12 times)

15	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
16	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
17	cs	hexadecimal	-	*70	Checksum
18	CRLF	character	-	-	Carriage return and line feed

## 2.7.13 GSA

### 2.7.13.1 GNSS DOP and active satellites

<b>Message</b>	<b>NMEA-Standard-GSA GNSS DOP and active satellites</b>				
<b>Type</b>	Output				
<b>Comment</b>	<p>The GNSS receiver operating mode, satellites used for navigation, and DOP values.</p> <ul style="list-style-type: none"> <li>If less than 12 SVs are used for navigation, the remaining fields are left empty. If more than 12 SVs are used for navigation, only the IDs of the first 12 are output.</li> <li>The SV numbers (fields 'svid') are in the range of 1 to 32 for GPS satellites, and 33 to 64 for SBAS satellites (33 = SBAS PRN 120, 34 = SBAS PRN 121, and so on)</li> </ul> <p><b>In a multi-GNSS system this message will be output multiple times, once for each GNSS.</b></p>				
<b>Information</b>	Class/ID: 0xF0 0x02		Number of fields: 21		
<b>Structure</b>	\$xxGSA,opMode,navMode{,svid},PDOP,HDOP,VDOP,systemId*cs\r\n				
<b>Example</b>	\$GPGSA,A,3,23,29,07,08,09,18,26,28,,,,,1.94,1.18,1.54,1*0D\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxGSA	string	-	\$GPGSA	GSA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	opMode	character	-	A	Operation mode: <ul style="list-style-type: none"> <li>M = Manually set to operate in 2D or 3D mode</li> <li>A = Automatically switching between 2D or 3D mode</li> </ul>
2	navMode	digit	-	3	Navigation mode, see <a href="#">position fix flags description</a>
<b>Start of repeated group (12 times)</b>					
3 + n	svid	numeric	-	29	Satellite number
<b>End of repeated group (12 times)</b>					
15	PDOP	numeric	-	1.94	Position dilution of precision
16	HDOP	numeric	-	1.18	Horizontal dilution of precision
17	VDOP	numeric	-	1.54	Vertical dilution of precision
18	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
19	cs	hexadecimal	-	*0D	Checksum
20	CRLF	character	-	-	Carriage return and line feed

## 2.7.14 GST

### 2.7.14.1 GNSS pseudorange error statistics

<b>Message</b>		<b>NMEA-Standard-GST</b>			
		<b>GNSS pseudorange error statistics</b>			
Type	Output				
Comment	This message reports statistical information on the quality of the position solution.				
Information	Class/ID: 0xF0 0x07		Number of fields: 11		
Structure	\$xxGST,time,rangeRms,stdMajor,stdMinor,orient,stdLat,stdLong,stdAlt*cs\r\n				
Example	\$GPGST,082356.00,1.8,,,,,1.7,1.3,2.2*7E\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGST	string	-	\$GPGST	GST Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	082356.00	UTC time of associated position fix. See section UTC representation in the integration manual for details.
2	rangeRms	numeric	m	1.8	RMS value of the standard deviation of the ranges
3	stdMajor	numeric	m	-	Standard deviation of semi-major axis
4	stdMinor	numeric	m	-	Standard deviation of semi-minor axis
5	orient	numeric	deg	-	Orientation of semi-major axis
6	stdLat	numeric	m	1.7	Standard deviation of latitude error
7	stdLong	numeric	m	1.3	Standard deviation of longitude error
8	stdAlt	numeric	m	2.2	Standard deviation of altitude error
9	cs	hexadecimal	-	*7E	Checksum
10	CRLF	character	-	-	Carriage return and line feed

## 2.7.15 GSV

### 2.7.15.1 GNSS satellites in view

<b>Message</b>		<b>NMEA-Standard-GSV</b>			
		<b>GNSS satellites in view</b>			
Type	Output				
Comment	The number of satellites in view, together with each SV ID, elevation azimuth, and signal strength (C/No) value. Only four satellite details are transmitted in one message. <b>In a multi-GNSS system sets of GSV messages will be output multiple times, one set for each GNSS.</b>				
Information	Class/ID: 0xF0 0x03		Number of fields: 7 + [1..4]*4		
Structure	\$xxGSV,numMsg,msgNum,numSV{,svid,elv,az,cno},signalId*cs\r\n				
Examples	\$GPGSV,3,1,09,09,,,17,10,,,40,12,,,49,13,,,35,1*6F\r\n \$GPGSV,3,2,09,15,,,44,17,,,45,19,,,44,24,,,50,1*64\r\n \$GPGSV,3,3,09,25,,,40,1*6E\r\n \$GPGSV,1,1,03,12,,,42,24,,,47,32,,,37,5*66\r\n \$GAGSV,1,1,00,2*76\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGSV	string	-	\$GPGSV	GSV Message ID (xx = GSV Talker ID, see <a href="#">NMEA Talker IDs table</a> ). Talker ID GN shall not be used.
1	numMsg	digit	-	3	Number of messages, total number of GSV messages being output (range: 1-9)
2	msgNum	digit	-	1	Number of this message (range: 1-numMsg)

3	numSV	numeric	-	10	Number of known satellites in view regarding both the talker ID and the signalId
<i>Start of repeated group (1...4 times)</i>					
4 + n·4	svid	numeric	-	23	Satellite ID
5 + n·4	elv	numeric	deg	38	Elevation (<= 90)
6 + n·4	az	numeric	deg	230	Azimuth (range: 0-359)
7 + n·4	cno	numeric	dBHz	44	Signal strength (C/N0, range: 0-99), null when not tracking
<i>End of repeated group (1...4 times)</i>					
4 + N·4	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
5 + N·4	cs	hexadecimal	-	*7F	Checksum
6 + N·4	CRLF	character	-	-	Carriage return and line feed

## 2.7.16 RLM

### 2.7.16.1 Return link message (RLM)

<b>Message</b>	<b>NMEA-Standard-RLM Return link message (RLM)</b>				
<b>Type</b>	Output				
<b>Comment</b>	<p>The RLM sentence is used to transfer a Return link message from a Cospas-Sarsat recognized Return link service provider (RLSP).</p> <p>The RLM sentence supports communications to an emitting beacon once a distress alert has been detected, located and confirmed. The communications may include acknowledgement of the alert to the emitting beacon as well as optional text messages, and may also include remote beacon configuration and testing.</p>				
<b>Information</b>	Class/ID: 0xF0 0x0b		Number of fields: 7		
<b>Structure</b>	\$xxRLM, beacon, time, code, body*cs\r\n				
<b>Examples</b>	<pre>\$GARLM, 00000078A9FBAD5, 083559.00, 3, C45B*57\r\n \$GARLM, F7129D41BC6A78C, 034433.02, 3, B63CA732AFD419D2*57\r\n</pre>				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxRLM	string	-	\$GARLM	RLM message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	beacon	hexadecimal	-	00000078A9FBAD5	Beacon ID, identifies beacon intended to receive this message (fixed length 15 hexadecimal character field)
2	time	hhmmss.ss	-	083559.00	Time of reception field to indicate RLM timestamp in UTC. See section UTC representation in the integration manual for details.
3	code	character	-	3	Message code field to identify type of RLM Message Service: <ul style="list-style-type: none"> <li>• 0 = Reserved for future RLM services</li> <li>• 1 = Acknowledgement service RLM</li> <li>• 2 = Command service RLM</li> <li>• 3 = Message service RLM</li> <li>• 4-E = Reserved for future RLM services</li> <li>• F = Test service RLM (currently used only by the Galileo program)</li> </ul>
4	body	hexadecimal	-	C45B	Message body encapsulates the data parameters provided by the RLSP into hexadecimal format.
5	cs	hexadecimal	-	*57	Checksum

6	CRLF	character	-	-	Carriage return and line feed
---	------	-----------	---	---	-------------------------------

## 2.7.17 RMC

### 2.7.17.1 Recommended minimum data

Message	NMEA-Standard-RMC Recommended minimum data				
Type	Output				
Comment	The recommended minimum sentence defined by NMEA for GNSS system data. <a href="#">🔗</a> The output of this message is dependent on the currently selected datum (default: WGS84)				
Information	Class/ID: 0xf0 0x04		Number of fields: 16		
Structure	\$xxRMC,time,status,lat,NS,lon,EW,spd,cog,date,mv,mvEW,posMode,navStatus*cs\r\n				
Example	\$GPRMC,083559.00,A,4717.11437,N,00833.91522,E,0.004,77.52,091202,,A,V*57\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxRMC	string	-	\$GPRMC	RMC Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	083559.00	UTC time. See section UTC representation in the integration manual for details.
2	status	character	-	A	Data validity status, see <a href="#">position fix flags description</a>
3	lat	ddmm. mmmm	-	4717.11437	Latitude (degrees and minutes), see <a href="#">format description</a>
4	NS	character	-	N	North/South indicator
5	lon	dddmm. mmmm	-	00833.91522	Longitude (degrees and minutes), see <a href="#">format description</a>
6	EW	character	-	E	East/West indicator
7	spd	numeric	knots	0.004	Speed over ground
8	cog	numeric	deg	77.52	Course over ground
9	date	ddmmyy	-	091202	Date in day, month, year format. See section UTC representation in the integration manual for details.
10	mv	numeric	deg	-	Magnetic variation value
11	mvEW	character	-	-	Magnetic variation E/W indicator
12	posMode	character	-	A	Mode Indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
13	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
14	cs	hexadecimal	-	*57	Checksum
15	CRLF	character	-	-	Carriage return and line feed

## 2.7.18 THS

### 2.7.18.1 True heading and status

Message	NMEA-Standard-THS True heading and status				
Type	Output				

<b>Comment</b>	Actual vehicle heading in degrees produced by any device or system producing true heading. This sentence includes a <i>Mode indicator</i> field providing critical safety-related information about the heading data, and replaces the HDT sentence.				
<b>Information</b>	<i>Class/ID:</i> 0xF0 0x0e	<i>Number of fields:</i> 5			
<b>Structure</b>	\$xxTHS,headt,mi*cs\r\n				
<b>Example</b>	\$GPTHS,77.52,E*32\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxTHS	string	-	\$GPTHS	THS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	headt	numeric	degrees	77.52	Heading of vehicle (true)
2	mi	character	-	E	Mode indicator: <ul style="list-style-type: none"> <li>• A = Autonomous</li> <li>• E = Estimated (dead reckoning)</li> <li>• M = Manual input</li> <li>• S = Simulator</li> <li>• V = Data not valid</li> </ul>
3	cs	hexadecimal	-	*32	Checksum
4	CRLF	character	-	-	Carriage return and line feed

## 2.7.19 TXT

### 2.7.19.1 Text transmission

<b>Message</b>	<b>NMEA-Standard-TXT</b> <b>Text transmission</b>				
<b>Type</b>	Output				
<b>Comment</b>	This message outputs various information on the receiver, such as power-up screen, software version etc. This message can be configured using the <a href="#">CFG-INFMSG</a> configuration group.				
<b>Information</b>	<i>Class/ID:</i> 0xF0 0x41	<i>Number of fields:</i> 7			
<b>Structure</b>	\$xxTXT,numMsg,msgNum,msgType,text*cs\r\n				
<b>Examples</b>	\$GPTXT,01,01,02,u-blox ag - www.u-blox.com*50\r\n \$GPTXT,01,01,02,ANTARIS ATR0620 HW 00000040*67\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxTXT	string	-	\$GPTXT	TXT Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	numMsg	numeric	-	01	Total number of messages in this transmission (range: 1-99)
2	msgNum	numeric	-	01	Message number in this transmission (range: 1-numMsg)
3	msgType	numeric	-	02	Text identifier (u-blox receivers specify the type of the message with this number): <ul style="list-style-type: none"> <li>• 00 = Error</li> <li>• 01 = Warning</li> <li>• 02 = Notice</li> <li>• 07 = User</li> </ul>
4	text	string	-	www.u-blox.com	Any ASCII text
5	cs	hexadecimal	-	*67	Checksum

6	CRLF	character	-	-	Carriage return and line feed
---	------	-----------	---	---	-------------------------------

## 2.7.20 VTG

### 2.7.20.1 Course over ground and ground speed

<b>Message</b>	<b>NMEA-Standard-VTG</b> <b>Course over ground and ground speed</b>				
<b>Type</b>	Output				
<b>Comment</b>	Velocity is given as course over ground (COG) and speed over ground (SOG).				
<b>Information</b>	Class/ID: 0xf0 0x05		Number of fields: 12		
<b>Structure</b>	\$xxVTG, cogt, cogtUnit, cogm, cogmUnit, sogn, sognUnit, sogk, sogkUnit, posMode*cs\r\n				
<b>Example</b>	\$GPVTG, 77.52, T, , M, 0.004, N, 0.008, K, A*06\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxVTG	string	-	\$GPVTG	VTG Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	cogt	numeric	degrees	77.52	Course over ground (true)
2	cogtUnit	character	-	T	Course over ground units: T (degrees true, fixed field)
3	cogm	numeric	degrees	-	Course over ground (magnetic)
4	cogmUnit	character	-	M	Course over ground units: M (degrees magnetic, fixed field)
5	sogn	numeric	knots	0.004	Speed over ground
6	sognUnit	character	-	N	Speed over ground units: N (knots, fixed field)
7	sogk	numeric	km/h	0.008	Speed over ground
8	sogkUnit	character	-	K	Speed over ground units: K (kilometers per hour, fixed field)
9	posMode	character	-	A	Mode indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
10	cs	hexadecimal	-	*06	Checksum
11	CRLF	character	-	-	Carriage return and line feed

## 2.7.21 ZDA

### 2.7.21.1 Time and date

<b>Message</b>	<b>NMEA-Standard-ZDA</b> <b>Time and date</b>				
<b>Type</b>	Output				
<b>Comment</b>	UTC, day, month, year and local time zone.				
<b>Information</b>	Class/ID: 0xf0 0x08		Number of fields: 9		
<b>Structure</b>	\$xxZDA, time, day, month, year, ltzh, ltzn*cs\r\n				
<b>Example</b>	\$GPZDA, 082710.00, 16, 09, 2002, 00, 00*64\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxZDA	string	-	\$GPZDA	ZDA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )

1	time	hhmmss.ss	-	082710.00	UTC Time. See section UTC representation in the integration manual for details.
2	day	dd	day	16	UTC day (range: 1-31)
3	month	mm	month	09	UTC month (range: 1-12)
4	year	yyyy	year	2002	UTC year
5	ltzh	xx	-	00	Local time zone hours (fixed field, always 00)
6	ltzn	zz	-	00	Local time zone minutes (fixed field, always 00)
7	cs	hexadecimal	-	*64	Checksum
8	CRLF	character	-	-	Carriage return and line feed

## 2.8 Secondary output messages

Secondary output NMEA messages. These are NMEA messages prepended with an NMEA TAG block as defined by the NMEA 0183 standard. See [NMEA protocol](#) for details.

### 2.8.1 GGA

#### 2.8.1.1 Global positioning system fix data

<b>Message</b>	<b>NMEA-NAV2-GGA</b> <b>Global positioning system fix data</b>				
<b>Type</b>	Output				
<b>Comment</b>	Time and position, together with GPS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.).  To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in accordance to NMEA 0183 Standard.   The output of this message is dependent on the currently selected datum (default: WGS84). The NMEA specification indicates that the GGA message is GPS-specific. However, when the receiver is configured for multi-GNSS, the GGA message contents will be generated from the multi-GNSS solution. For multi-GNSS use, it is recommended that the <a href="#">NMEA-GNS</a> message is used instead.				
<b>Information</b>	Class/ID: 0xf7 0x00		Number of fields: 21

6	NS	character	-	N	North/South indicator
7	lon	dddmm. mmmmm	-	00833.91565	Longitude (degrees and minutes), see <a href="#">format description</a>
8	EW	character	-	E	East/West indicator

9	time	hhmmss.ss -	092321.00	UTC time. See section UTC representation in the integration manual for details.
10	status	character -	A	Data validity status, see <a href="#">position fix flags description</a>
11	posMode	character -	A	Positioning mode, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
12	cs	hexadecimal -	*60	Checksum
13	CRLF	character -	-	Carriage return and line feed

## 2.8.3 GNS

### 2.8.3.1 GNSS fix data

<b>Message</b>	<b>NMEA-NAV2-GNS GNSS fix data</b>				
<b>Type</b>	Output				
<b>Comment</b>	Time and position, together with GNSS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.). To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard. 🔄 The output of this message is dependent on the currently selected datum (default: WGS84)				
<b>Information</b>	Class/ID: 0xf7 0x0d		Number of fields: 20		
<b>Structure</b>	\s:1*78\\$\xxGNS,time,lat,NS,lon,EW,posMode,numSV,HDOP,alt,sep,diffAge,diffStation,nav ↵ Status*cs\r\n				
<b>Examples</b>	\s:1*78\\$\GNGNS,103600.01,5114.51176,N,00012.29380,W,ANNN,07,1.18,111.5,45.6,,,V*00\r ↵ \n \s:1*78\\$\GNGNS,122310.2,3722.425671,N,12258.856215,W,DAAA,14,0.9,1005.543,6.5,,,V*0E ↵ \r\n \s:1*78\\$\GPGNS,122310.2,,,,,07,,,,5.2,23,V*02\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal -		*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxGNS	string	-	\$GPGNS	GNS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	time	hhmmss.ss -		091547.00	UTC time. See section UTC representation in the integration manual for details.
6	lat	ddmm. mmmm	-	5114.50897	Latitude (degrees and minutes), see <a href="#">format description</a>
7	NS	character	-	N	North/South indicator
8	lon	dddmm. mmmm	-	00012.28663	Longitude (degrees and minutes), see <a href="#">format description</a>
9	EW	character	-	E	East/West indicator
10	posMode	character	-	AAAA	Positioning mode, see <a href="#">position fix flags description</a> . Four first characters are in the following order for GPS, GLONASS, Galileo and BeiDou. In NMEA GNS, u-blox uses a non-standard implementation where same single status is reported for all enabled and not filtered out constellations.

11	numSV	numeric	-	10	Number of satellites used (range: 0-99)
12	HDOP	numeric	-	0.83	Horizontal Dilution of Precision
13	alt	numeric	m	111.1	Altitude above mean sea level
14	sep	numeric	m	45.6	Geoid separation: difference between ellipsoid and mean sea level
15	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
16	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
17	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
18	cs	hexadecimal	-	*71	Checksum
19	CRLF	character	-	-	Carriage return and line feed

## 2.8.4 GSA

### 2.8.4.1 GNSS DOP and active satellites

<b>Message</b>	<b>NMEA-NAV2-GSA GNSS DOP and active satellites</b>				
<b>Type</b>	Output				
<b>Comment</b>	<p>The GNSS receiver operating mode, satellites used for navigation, and DOP values.</p> <ul style="list-style-type: none"> <li>If less than 12 SVs are used for navigation, the remaining fields are left empty. If more than 12 SVs are used for navigation, only the IDs of the first 12 are output.</li> <li>The SV numbers (fields 'svid') are in the range of 1 to 32 for GPS satellites, and 33 to 64 for SBAS satellites (33 = SBAS PRN 120, 34 = SBAS PRN 121, and so on)</li> </ul> <p><b>In a multi-GNSS system this message will be output multiple times, once for each GNSS.</b></p> <p>To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.</p>				
<b>Information</b>	Class/ID: 0xf7 0x02		Number of fields: 25		
<b>Structure</b>	\s:1*78\\$\xxGSA, opMode, navMode{, svid}, PDOP, HDOP, VDOP, systemId*cs\r\n				
<b>Example</b>	\s:1*78\\$\\$GPGSA, A, 3, 23, 29, 07, 08, 09, 18, 26, 28, , , , , 1.94, 1.18, 1.54, 1*0D\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxGSA	string	-	\$GPGSA	GSA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	opMode	character	-	A	Operation mode: <ul style="list-style-type: none"> <li>M = Manually set to operate in 2D or 3D mode</li> <li>A = Automatically switching between 2D or 3D mode</li> </ul>
6	navMode	digit	-	3	Navigation mode, see <a href="#">position fix flags description</a>
<b>Start of repeated group (12 times)</b>					
7 + n	svid	numeric	-	29	Satellite number

End of repeated group (12 times)

19	PDOP	numeric	-	1.94	Position dilution of precision
20	HDOP	numeric	-	1.18	Horizontal dilution of precision
21	VDOP	numeric	-	1.54	Vertical dilution of precision
22	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
23	cs	hexadecimal	-	*0D	Checksum
24	CRLF	character	-	-	Carriage return and line feed

## 2.8.5 RMC

### 2.8.5.1 Recommended minimum data

Message	NMEA-NAV2-RMC				
Type	Recommended minimum data				
Type	Output				
Comment	The recommended minimum sentence defined by NMEA for GNSS system data. To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard. 🔄 The output of this message is dependent on the currently selected datum (default: WGS84)				
Information	Class/ID: 0xf7 0x04		Number of fields: 20		
Structure	\s:1*78\\$\xxRMC,time,status,lat,NS,lon,EW,spd,cog,date,mv,mvEW,posMode,navStatus*cs\r ↵ \n				
Example	\s:1*78\\$\GPRMC,083559.00,A,4717.11437,N,00833.91522,E,0.004,77.52,091202,,A,V*57\r ↵ \n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxRMC	string	-	\$GPRMC	RMC Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	time	hhmmss.ss	-	083559.00	UTC time. See section UTC representation in the integration manual for details.
6	status	character	-	A	Data validity status, see <a href="#">position fix flags description</a>
7	lat	ddmm. mmmm	-	4717.11437	Latitude (degrees and minutes), see <a href="#">format description</a>
8	NS	character	-	N	North/South indicator
9	lon	dddmm. mmmm	-	00833.91522	Longitude (degrees and minutes), see <a href="#">format description</a>
10	EW	character	-	E	East/West indicator
11	spd	numeric	knots	0.004	Speed over ground
12	cog	numeric	deg	77.52	Course over ground
13	date	ddmmyy	-	091202	Date in day, month, year format. See section UTC representation in the integration manual for details.
14	mv	numeric	deg	-	Magnetic variation value

15	mvEW	character	-	-	Magnetic variation E/W indicator
16	posMode	character	-	A	Mode Indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
17	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
18	cs	hexadecimal	-	*57	Checksum
19	CRLF	character	-	-	Carriage return and line feed

## 2.8.6 VTG

### 2.8.6.1 Course over ground and ground speed

<b>Message</b>	<b>NMEA-NAV2-VTG</b> <b>Course over ground and ground speed</b>				
<b>Type</b>	Output				
<b>Comment</b>	Velocity is given as course over ground (COG) and speed over ground (SOG). To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.				
<b>Information</b>	Class/ID: 0xf7 0x05		Number of fields: 16		
<b>Structure</b>	\s:1*78\\$\xxVTG, cogt, cogtUnit, cogm, cogmUnit, sogn, sognUnit, sogk, sogkUnit, posMode*cs\r\n				
<b>Example</b>	\s:1*78\\$\\$GPVTG, 77.52, T, , M, 0.004, N, 0.008, K, A*06\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxVTG	string	-	\$GPVTG	VTG Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	cogt	numeric	degrees	77.52	Course over ground (true)
6	cogtUnit	character	-	T	Course over ground units: T (degrees true, fixed field)
7	cogm	numeric	degrees	-	Course over ground (magnetic)
8	cogmUnit	character	-	M	Course over ground units: M (degrees magnetic, fixed field)
9	sogn	numeric	knots	0.004	Speed over ground
10	sognUnit	character	-	N	Speed over ground units: N (knots, fixed field)
11	sogk	numeric	km/h	0.008	Speed over ground
12	sogkUnit	character	-	K	Speed over ground units: K (kilometers per hour, fixed field)
13	posMode	character	-	A	Mode indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
14	cs	hexadecimal	-	*06	Checksum
15	CRLF	character	-	-	Carriage return and line feed

## 2.8.7 ZDA

### 2.8.7.1 Time and date

<b>Message</b>	<b>NMEA-NAV2-ZDA</b>				
	<b>Time and date</b>				
<b>Type</b>	Output				
<b>Comment</b>	UTC, day, month, year and local time zone. To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.				
<b>Information</b>	Class/ID: 0xf7 0x08		Number of fields: 13		
<b>Structure</b>	\s:1*78\\$\\$GPZDA,time,day,month,year,ltzh,ltzn*cs\r\n				
<b>Example</b>	\s:1*78\\$\\$xxZDA,082710.00,16,09,2002,00,00*64\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxZDA	string	-	\\$GPZDA	ZDA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	time	hhmmss.ss	-	082710.00	UTC Time. See section UTC representation in the integration manual for details.
6	day	dd	day	16	UTC day (range: 1-31)
7	month	mm	month	09	UTC month (range: 1-12)
8	year	yyyy	year	2002	UTC year
9	ltzh	xx	-	00	Local time zone hours (fixed field, always 00)
10	ltzn	zz	-	00	Local time zone minutes (fixed field, always 00)
11	cs	hexadecimal	-	*64	Checksum
12	CRLF	character	-	-	Carriage return and line feed

## 2.9 PUBX messages

Proprietary NMEA messages for u-blox positioning receivers. See also [NMEA-proprietary messages](#).

### 2.9.1 CONFIG (PUBX,41)

#### 2.9.1.1 Set protocols and baud rate

<b>Message</b>	<b>NMEA-PUBX-CONFIG</b>				
	<b>Set protocols and baud rate</b>				
<b>Type</b>	Set				
<b>Comment</b>					
<b>Information</b>	Class/ID: 0xf1 0x41		Number of fields: 9		
<b>Structure</b>	\\$PUBX,41,portId,inProto,outProto,baudrate,autobauding*cs\r\n				
<b>Example</b>	\\$PUBX,41,1,0007,0003,19200,0*25\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	PUBX	string	-	\\$PUBX	Message ID, UBX protocol header, proprietary sentence

1	msgId	numeric	-	41	Proprietary message identifier
2	portId	numeric	-	1	ID of communication port. See section Communication ports in the integration manual for details.
3	inProto	hexadecimal	-	0007	Input protocol mask. Bitmask, specifying which protocols(s) are allowed for input. See section Communication ports in the integration manual for details.
4	outProto	hexadecimal	-	0003	Output protocol mask. Bitmask, specifying which protocols(s) are allowed for input. See section Communication ports in the integration manual for details.
5	baudrate	numeric	bits/s	19200	Baud rate
6	autobauding	numeric	-	-	Autobauding: 1=enable, 0=disable (not supported on u-blox 5, set to 0)
7	cs	hexadecimal	-	*25	Checksum
8	CRLF	character	-	-	Carriage return and line feed

## 2.9.2 POSITION (PUBX,00)

### 2.9.2.1 Poll a PUBX,00 message

<b>Message</b>	<b>NMEA-PUBX-POSITION</b> <b>Poll a PUBX,00 message</b>				
<b>Type</b>	Poll request				
<b>Comment</b>	A PUBX,00 message is polled by sending the PUBX,00 message without any data fields.				
<b>Information</b>	Class/ID: 0xf1 0x00		Number of fields: 4		
<b>Structure</b>	\$PUBX,00*33\r\n				
<b>Example</b>	\$PUBX,00*33\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	00	Set to 00 to poll a PUBX,00 message
2	cs	hexadecimal	-	*33	Checksum
3	CRLF	character	-	-	Carriage return and line feed

### 2.9.2.2 Lat/Long position data

<b>Message</b>	<b>NMEA-PUBX-POSITION</b> <b>Lat/Long position data</b>				
<b>Type</b>	Output				
<b>Comment</b>	This message contains position solution data. The datum selection may be changed using the message UBX-CFG-DAT. <a href="#">↗</a> The output of this message is dependent on the currently selected datum (default: WGS84).				
<b>Information</b>	Class/ID: 0xf1 0x00		Number of fields: 23		
<b>Structure</b>	\$PUBX,00,time,lat,NS,long,EW,altRef,navStat,hAcc,vAcc,SOG,COG,vVel,diffAge,HDOP,VDOP ↵ ,TDOP,numSvs,reserved,DR,*cs\r\n				
<b>Example</b>	\$PUBX,00,081350.00,4717.113210,N,00833.915187,E,546.589,G3,2.1,2.0,0.007,77.52,0.007 ↵ ,,0.92,1.19,0.77,9,0,0*5F\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>

0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	00	Proprietary message identifier: 00
2	time	hhmmss.ss	-	081350.00	UTC time. See section UTC representation in the integration manual for details.
3	lat	ddmm. mmmm	-	4717.113210	Latitude (degrees and minutes), see <a href="#">format description</a>
4	NS	character	-	N	North/South Indicator
5	long	dddmm. mmmm	-	00833.915187	Longitude (degrees and minutes), see <a href="#">format description</a>
6	EW	character	-	E	East/West indicator
7	altRef	numeric	m	546.589	Altitude above user datum ellipsoid
8	navStat	string	-	G3	Navigation Status: <ul style="list-style-type: none"> <li>• NF = No Fix</li> <li>• DR = Dead reckoning only solution</li> <li>• G2 = Stand alone 2D solution</li> <li>• G3 = Stand alone 3D solution</li> <li>• D2 = Differential 2D solution</li> <li>• D3 = Differential 3D solution</li> <li>• RK = Combined GPS + dead reckoning solution</li> <li>• TT = Time only solution</li> </ul>
9	hAcc	numeric	m	2.1	Horizontal accuracy estimate
10	vAcc	numeric	m	2.0	Vertical accuracy estimate
11	SOG	numeric	km/h	0.007	Speed over ground
12	COG	numeric	deg	77.52	Course over ground
13	vVel	numeric	m/s	0.007	Vertical velocity (positive downwards)
14	diffAge	numeric	s	-	Age of differential corrections (blank when DGPS is not used)
15	HDOP	numeric	-	0.92	HDOP, Horizontal Dilution of Precision
16	VDOP	numeric	-	1.19	VDOP, Vertical Dilution of Precision
17	TDOP	numeric	-	0.77	TDOP, Time Dilution of Precision
18	numSvs	numeric	-	9	Number of satellites used in the navigation solution
19	reserved	numeric	-	-	Reserved, always set to 0
20	DR	numeric	-	-	DR used
21	cs	hexadecimal	-	*5B	Checksum
22	CRLF	character	-	-	Carriage return and line feed

## 2.9.3 RATE (PUBX,40)

### 2.9.3.1 Set NMEA message output rate

<b>Message</b>	<b>NMEA-PUBX-RATE</b> <b>Set NMEA message output rate</b>	
<b>Type</b>	Set	
<b>Comment</b>	Set/Get message rate configuration (s) to/from the receiver. <ul style="list-style-type: none"> <li>• Send rate is relative to the event a message is registered on. For example, if the rate of a navigation message is set to 2, the message is sent every second navigation solution.</li> </ul>	
<b>Information</b>	<i>Class/ID: 0xf1 0x40</i>	<i>Number of fields: 11</i>
<b>Structure</b>	\$PUBX, 40, msgId, rddc, rus1, rus2, rusb, rspi, reserved*cs\r\n	

**Example**     \$PUBX,40,GLL,1,0,0,0,0,0\*5D\r\n

**Payload:**

Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	ID	numeric	-	40	Proprietary message identifier
2	msgId	string	-	GLL	NMEA message identifier
3	rddc	numeric	cycles	1	output rate on DDC <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
4	rus1	numeric	cycles	1	output rate on USART 1 <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
5	rus2	numeric	cycles	1	output rate on USART 2 <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
6	rusb	numeric	cycles	1	output rate on USB <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
7	rspi	numeric	cycles	1	output rate on SPI <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>

## 2.9.4 SVSTATUS (PUBX,03)

### 2.9.4.1 Poll a PUBX,03 message

<b>Message</b>	<b>NMEA-PUBX-SVSTATUS</b> <b>Poll a PUBX,03 message</b>				
<b>Type</b>	Poll request				
<b>Comment</b>	A PUBX,03 message is polled by sending the PUBX,03 message without any data fields.				
<b>Information</b>	Class/ID: 0xf1 0x03		Number of fields: 4		
<b>Structure</b>	\$PUBX,03*30\r\n				
<b>Example</b>	\$PUBX,03*30\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	03	Set to 03 to poll a PUBX,03 message
2	cs	hexadecimal	-	*30	Checksum
3	CRLF	character	-	-	Carriage return and line feed

### 2.9.4.2 Satellite status

<b>Message</b>	<b>NMEA-PUBX-SVSTATUS</b>				
	<b>Satellite status</b>				
<b>Type</b>	Output				
<b>Comment</b>	The PUBX,03 message contains satellite status information.				
<b>Information</b>	Class/ID: 0xf1 0x03		Number of fields: 5 + n-6		
<b>Structure</b>	\$PUBX,03,GT{,sv,s,az,e1,cno,lck},*cs\r\n				
<b>Example</b>	\$PUBX,03,11,23,-,45,010,29,-,46,013,07,-,42,015,08,U,067,31,42,025,10,U,195,33,46,026,18,U,326,08,39,026,17,-,32,015,26,U,306,66,48,025,27,U,073,10,36,026,28,U,089,61,46,024,15,-,39,014*0D\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	03	Proprietary message identifier: 03
2	n	numeric	-	11	Number of GNSS satellites tracked
<i>Start of repeated group (n times)</i>					
3 + n-6	sv	numeric	-	23	Satellite ID according to UBX svId mapping (see <a href="#">Satellite Numbering</a> )
4 + n-6	s	character	-	-	Satellite status: <ul style="list-style-type: none"> <li>- = Not used</li> <li>U = Used in solution</li> <li>e = Ephemeris available, but not used for navigation</li> </ul>
5 + n-6	az	numeric	deg	-	Satellite azimuth (range: 0-359)
6 + n-6	e1	numeric	deg	-	Satellite elevation (<= 90)
7 + n-6	cno	numeric	dBHz	45	Signal strength (C/N0, range 0-99), blank when not tracking
8 + n-6	lck	numeric	s	010	Satellite carrier lock time (range: 0-64) <ul style="list-style-type: none"> <li>0 = code lock only</li> <li>64 = lock for 64 seconds or more</li> </ul>
<i>End of repeated group (n times)</i>					
3 + n-6	cs	hexadecimal	-	*0D	Checksum
4 + n-6	CRLF	character	-	-	Carriage return and line feed

## 2.9.5 TIME (PUBX,04)

### 2.9.5.1 Poll a PUBX,04 message

<b>Message</b>	<b>NMEA-PUBX-TIME</b>				
	<b>Poll a PUBX,04 message</b>				
<b>Type</b>	Poll request				
<b>Comment</b>	A PUBX,04 message is polled by sending the PUBX,04 message without any data fields.				
<b>Information</b>	Class/ID: 0xf1 0x04		Number of fields: 4		
<b>Structure</b>	\$PUBX,04*37\r\n				
<b>Example</b>	\$PUBX,04*37\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence

1	msgId	numeric	-	04	Set to 04 to poll a PUBX,04 message
2	cs	hexadecimal	-	*37	Checksum
3	CRLF	character	-	-	Carriage return and line feed

### 2.9.5.2 Time of day and clock information

<b>Message</b>	<b>NMEA-PUBX-TIME</b>				
	<b>Time of day and clock information</b>				
<b>Type</b>	Output				
<b>Comment</b>					
<b>Information</b>	Class/ID: 0xf1 0x04		Number of fields: 12		
<b>Structure</b>	\$PUBX,04,time,date,utcTow,utcWk,leapSec,clkBias,clkDrift,tpGran,*cs\r\n				
<b>Example</b>	\$PUBX,04,073731.00,091202,113851.00,1196,15D,1930035,-2660.664,43,*3C\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	04	Proprietary message identifier: 04
2	time	hhmmss.ss	-	073731.00	UTC time. See section UTC representation in the integration manual for details.
3	date	ddmmyy	-	091202	UTC date, day, month, year. See section UTC representation in the integration manual for details.
4	utcTow	numeric	s	113851.00	UTC time of week
5	utcWk	numeric	-	1196	UTC week number, continues beyond 1023
6	leapSec	numeric/ text	s	15D	Leap seconds (not supported for protocol versions less than 13.01)  The number is marked with a <i>D</i> if the value is the firmware default value. If the value is not marked it has been received from a satellite.
7	clkBias	numeric	ns	1930035	Receiver clock bias
8	clkDrift	numeric	ns/s	-2660.664	Receiver clock drift
9	tpGran	numeric	ns	43	Time pulse granularity, the quantization error of the TIMEPULSE pin
10	cs	hexadecimal	-	*3C	Checksum
11	CRLF	character	-	-	Carriage return and line feed

## 3 UBX protocol

### 3.1 UBX protocol key features

u-blox receivers support a u-blox-proprietary protocol to communicate with a host computer. This protocol has the following key features:

- Compact – uses 8-bit binary data
- Checksum protected – uses a low-overhead checksum algorithm
- Modular – uses a two-stage message identifier (Class and Message ID)

### 3.2 UBX frame structure

The structure of a basic UBX frame is shown in the following diagram.

- Every *frame* starts with a 2-byte *preamble* consisting of two synchronization characters: 0xb5 and 0x62.
- A 1-byte *message class* field follows. A class is a group of messages that are related to each other.
- A 1-byte *message ID* field defines the message that is to follow.
- A 2-byte *length* field follows. The length is defined as being that of the payload only. It does not include the preamble, message class, message ID, length, or [UBX checksum](#) fields. The number format of the length field is an unsigned little-endian 16-bit integer (a "U2" in [UBX data types](#)).
- The *payload* field contains a variable number (= *length*) of bytes.
- The two 1-byte *CK\_A* and *CK\_B* fields hold a 16-bit checksum whose calculation is defined in [UBX checksum](#) section. This concludes the frame.

### 3.3 UBX payload definition rules

This section contains the rules and guidelines for UBX message payloads. See also [UBX message example](#).

#### 3.3.1 UBX structure packing

Values are placed in such an order that structure packing is not a problem. This means that two-byte values shall start on offsets that are a multiple of two; four-byte values shall start at a multiple of four; and so on.

#### 3.3.2 UBX reserved elements

Some messages contain reserved fields or bits to allow for future expansion. The contents of these elements should be ignored in output messages and must be set to zero in input messages. Where a message is output and subsequently returned to the receiver as an input message, reserved elements can either be explicitly set to zero or left with whatever value they were output with.

For fields in a bitfield the same rules apply. Note that bits not described are automatically reserved and are not explicitly stated (see [UBX message example](#)).

#### 3.3.3 UBX undefined values

The description of some fields provide specific meanings for specific values. For example, the field `gnssId` appears in many UBX messages and uses 0 to indicate GPS, 1 for SBAS and so on (see [GNSS identifiers](#) for details); however it is usually stored in a byte with far more possible values than the handful currently defined. All such undefined values are reserved for future expansion and therefore should not be used.

#### 3.3.4 UBX conditional values

Some UBX messages use validity flag fields to indicate whether the values of some value fields are valid. For example the `UBX-NAV-PVT` message has the `validDate` and `validTime` fields that indicate whether the date (`year`, `month` and `day` fields), and, respectively, the time (`hour`, `min` and `sec` fields) are valid. This means that these value fields will only contain meaningful data if the corresponding flag field is set (has the value 1).

#### 3.3.5 UBX data types

The following data types (number formats) are defined.

Name	Type	Size (Bytes)	Range	Resolution
U1	unsigned 8-bit integer	1	$0 \dots 2^8 - 1$	1
I1	signed 8-bit integer, two's complement	1	$-2^7 \dots 2^7 - 1$	1
X1	8-bit bitfield	1	n/a	n/a
U2	unsigned little-endian 16-bit integer	2	$0 \dots 2^{16} - 1$	1
I2	signed little-endian 16-bit integer, two's complement	2	$-2^{15} \dots 2^{15} - 1$	1
X2	16-bit little-endian bitfield	2	n/a	n/a
U4	unsigned little-endian 32-bit integer	4	$0 \dots 2^{32} - 1$	1
I4	signed little-endian 32-bit integer, two's complement	4	$-2^{31} \dots 2^{31} - 1$	1
X4	32-bit little-endian bitfield	4	n/a	n/a

Name	Type	Size (Bytes)	Range	Resolution
R4	IEEE 754 single (32-bit) precision	4	$-2^{127} \dots 2^{127}$	$\sim \text{value} \cdot 2^{-24}$
R8	IEEE 754 double (64-bit) precision	8	$-2^{1023} \dots 2^{1023}$	$\sim \text{value} \cdot 2^{-53}$
CH	ASCII / ISO 8859-1 char (8-bit)	1	n/a	n/a
U <sub>.n</sub>	unsigned bitfield value of <i>n</i> bits width	var.	variable	variable
I <sub>.n</sub>	signed (two's complement) bitfield value of <i>n</i> bits width	var.	variable	variable
S <sub>.n</sub>	signed bitfield value of <i>n</i> bits width, in sign (most significant bit) and magnitude (remaining bits) notation	var.	variable	variable

### 3.3.6 UBX fields scale and unit

Fields in UBX messages can have a unit defined. Whenever possible, SI units and symbols are used (e.g. "m" for meters, "s" for seconds). For civil (UTC) time representation units of years (y), months (month), days (d), hours (h), minutes (min) and seconds (s) are used.

Fields in UBX messages can have a scale factor defined. Unity (factor 1) is assumed if no scale is specified. For integer type fields this is often combined with a unit. When a scale is combined with a unit, the scale represents the smallest storage unit. For example, if meters (m) are expressed (stored) in centimeters the scale would be 0.01 (or 1e-2). This is equivalent of specifying a unit of centimeters (cm) and no scale.

The description of some integer values (e.g. U2, I4 or I8) indicates a fixed-point format (e.g. [UU.FF], [IIII.FFF] or [IIIIII.FFFFFFFF]). The fixed-point value can be retrieved from the integer value by first casting it to appropriate type (e.g. as a floating-point number) and then scaling it with the indicated scaling factor.

### 3.3.7 UBX repeated fields

There are two types of repetitions in UBX messages. The first type specifies that a single field is repeated a constant number of times. This repetition is defined in the type of the field. For example, the [UBX message example](#) can specify a field `data` of type `U1[5]`. In this case the `data` field should be interpreted as an array of five U1 values.

The second type of repetition in messages is referred to as *repeated groups*, which groups one or more fields into a block of payload data. There are several types of repetition:

- The number of repetitions of *variable-by-field group* is indicated by another, earlier field in the same message. The number of repetitions can be zero or more, depending on the value of the referenced field.
- A *constant group* has a constant number of repetitions.
- An *optional group* is repeated zero or one times, depending on the available payload data. That is, the fields are present in the message only if the payload of the message is large enough to cover the whole group of fields.
- The number of repetitions of a *variable-by-size group* is given by the available payload size. The group will repeat until there is not enough payload data left to cover the whole group of fields another time.

Note that only some combinations of repeated groups of fields are possible in a single message. See also [UBX payload decoding](#).

### 3.3.8 UBX payload decoding

UBX message payloads are designed so that the data (fields) can be extracted by a single pass through the payload from start to end. Fixed-size messages are the trivial case where the offset of all fields is unambiguously defined. Variable-size messages have variable number of repetitions of one or multiple groups of fields. For groups where the number of repetitions is given by the value of another field, that field can always be found at a fixed offset in the message payload before the respective group of fields. Groups whose number of repetitions depend on the payload size can only be the last group of fields in a message and only one such group may exist in a message. See also [UBX repeated fields](#).

## 3.4 UBX checksum

The checksum is calculated over the message, starting and including the class field up until, but excluding, the checksum fields (see the figure [UBX frame structure](#)).

The checksum algorithm used is the 8-bit Fletcher algorithm, which is used in the TCP standard [RFC 1145](#)). This algorithm works as follows:

- `Buffer[N]` is an array of bytes that contains the data over which the checksum is to be calculated.
- The two `CK_A` and `CK_B` values are 8-bit unsigned integers, only! If implementing with larger-sized integer values, make sure to mask both `CK_A` and `CK_B` with the value `0xff` after both operations in the loop.
- After the loop, the two `UI` values contain the checksum, transmitted after the message payload, which concludes the frame.

```
1 CK_A = 0, CK_B = 0
2 For (I = 0; I < N; I++)
3 {
4     CK_A = CK_A + Buffer[I]
5     CK_B = CK_B + CK_A
6 }
```

## 3.5 UBX message flow

There are certain features associated with the messages being sent back and forth:

### 3.5.1 UBX acknowledgement

When messages from the class CFG are sent to the receiver, the receiver will send an "acknowledge" ([UBX-ACK-ACK](#)) or a "not acknowledge" ([UBX-ACK-NAK](#)) message back to the sender, depending on whether or not the message was processed correctly.

Some messages from other classes also use the same acknowledgement mechanism.

### 3.5.2 UBX polling mechanism

The UBX protocol is designed so that messages can be polled by sending the message required to the receiver but without a payload (or with just a single parameter that identifies the poll request). The receiver then responds with the same message with the payload populated.

## 3.6 GNSS, satellite, and signal numbering

See [GNSS, satellite, and signal identifiers](#) for details on how GNSS, satellites and signals are numbered in the UBX protocol.

## 3.7 UBX message example

This is an example of the definition of UBX messages as shown in the following sections.

<b>Message</b>	<b>UBX-DEMO-EXAMPLE</b>					
<b>1</b>	<b>Example demo message</b>					
<b>Type</b> <b>2</b>	Periodic/pollled					
<b>Comment</b>	This is a comment that describes the use of the demo example message.					
<b>3</b>	There can be references to other sections in the documentation (such as: <a href="#">UBX protocol</a> ). 🔗 Note that there can be important remarks here.					
<b>Message</b> <b>4</b>	<i>Header</i>	<i>Class ID</i>	<i>Length (bytes)</i>		<i>Payload</i>	<i>Checksum</i>
<b>Structure</b>	0xb5 0x62 0x01 0x07		16 + numRepeat*4		see below	CK_A CK_B
<b>Payload description:</b> <b>5</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	aField	-	-	a field that contains an unsigned integer with no particular scale or unit	
4	I4	anotherField	1e-2	m	a field that contains a length in meters (m) with a scale of 1e-2 (= 0.01), i.e. a length in centimeters	
8	X2	bitfield <b>6</b>	-	-	this field contains flags or values smaller than one byte, whose definition follows below (bits not described are <a href="#">reserved</a> )	
bit 0	U:1	aFieldValid	-	-	the first bit in bitfield indicates whether the aField is valid or not (see <a href="#">UBX conditional values</a> )	
bit 1	U:1	someFlag	-	-	the second bit is a flag (1 = true, 0 = false)	
bits 5...2	U:4	aBitFieldValue	-	-	a 4-bits value (range: 0...15)	
10	U1[5] <b>7</b>	reserved0	-	-	a <a href="#">reserved</a> field, whose value shall be ignored (in output messages) or set to 0 (in input messages)	
15	U1	numRepeat	-	-	number of repetitions in the group of fields below	
<b>Start of repeated group (numRepeat times)</b> <b>8</b>						
16 + n*4	I2	someValue	-	-	a signed value in a repeated group of fields	
18 + n*4	U2	anotherValue	-	-	another value in a repeated group of fields	
<b>End of repeated group (numRepeat times)</b>						

**1** The first line shows the message name (see [Message naming](#)). The second line shows a short description of the message.

**2** The message type (see [Message types](#)).

**3** This section contains comments that describe the message. Often links to other related sections in the documentation or other related messages are found here.

- 4 The message structure gives the parameters for the [UBX frame structure](#), notably the message class and message ID values and the payload length. For many messages the payload length is a fixed number (of bytes). Messages that contain repeated blocks of information (fields) have a variable payload (see [UBX repeated fields](#)).
- 5 The message payload definition is given as a list of fields and their parameters. Each field starts at a specified offset (in bytes) in the payload (see also [UBX structure packing](#)), is of a specific type (see [UBX data types](#)), has a unique name (within the message), and a description. Optionally, fields can have a scale and/or a unit (see [UBX fields scale and unit](#)).
- 6 Bitfields ("X" types) are broken down into smaller parts. Each part can be one or more bits wide. Values that are two or more bits wide can be unsigned or one of two signed value representation (see [UBX data types](#)). Note that the ten unused bits 15...6 are not explicitly stated as [UBX reserved elements](#).
- 7 Fields can be arrays of values of the same type (see [UBX repeated fields](#)).
- 8 Groups of fields can be repeated in the payload. The number of repetitions can be given by another field in the message (this example), a constant number, zero or one times (known as "optional group"), or derived from the remaining payload size (labeled as "repeated N times"). See also [UBX repeated fields](#) and [UBX payload decoding](#).

### 3.8 UBX messages overview

<i>Message</i>	<i>Class/ID</i>	<i>Description (Type)</i>
<b>UBX-ACK – Acknowledgement and negative acknowledgement messages</b>		
<a href="#">UBX-ACK-ACK</a>	0x05 0x01	• Message acknowledged (Output)
<a href="#">UBX-ACK-NAK</a>	0x05 0x00	• Message not acknowledged (Output)
<b>UBX-CFG – Configuration and command messages</b>		
<a href="#">UBX-CFG-CFG</a>	0x06 0x09	• Clear, save and load configurations (Command)
<a href="#">UBX-CFG-RST</a>	0x06 0x04	• Reset receiver / Clear backup data structures (Command)
<a href="#">UBX-CFG-SPT</a>	0x06 0x64	• Configure and start a sensor production test (Get/set)
<a href="#">UBX-CFG-VALDEL</a>	0x06 0x8c	• Delete configuration item values (Set) • Delete configuration item values (with transaction) (Set)
<a href="#">UBX-CFG-VALGET</a>	0x06 0x8b	• Get configuration items (Poll request) • Configuration items (Polled)
<a href="#">UBX-CFG-VALSET</a>	0x06 0x8a	• Set configuration item values (Set) • Set configuration item values (with transaction) (Set)
<b>UBX-ESF – External sensor fusion messages</b>		
<a href="#">UBX-ESF-ALG</a>	0x10 0x14	• IMU alignment information (Periodic/polled)
<a href="#">UBX-ESF-CAL</a>	0x10 0x04	• Calibrated sensor measurements (Output)
<a href="#">UBX-ESF-INS</a>	0x10 0x15	• Vehicle dynamics information (Periodic/polled)
<a href="#">UBX-ESF-MEAS</a>	0x10 0x02	• External sensor fusion measurements (Input/output)
<a href="#">UBX-ESF-RAW</a>	0x10 0x03	• Raw sensor measurements (Output)
<a href="#">UBX-ESF-STATUS</a>	0x10 0x10	• External sensor fusion status (Periodic/polled)
<b>UBX-INF – Information messages</b>		
<a href="#">UBX-INF-DEBUG</a>	0x04 0x04	• ASCII output with debug contents (Output)
<a href="#">UBX-INF-ERROR</a>	0x04 0x00	• ASCII output with error contents (Output)
<a href="#">UBX-INF-NOTICE</a>	0x04 0x02	• ASCII output with informational contents (Output)
<a href="#">UBX-INF-TEST</a>	0x04 0x03	• ASCII output with test contents (Output)

<b>Message</b>	<b>Class/ID</b>	<b>Description (Type)</b>
UBX-INF-WARNING	0x04 0x01	• ASCII output with warning contents (Output)
<b>UBX-MGA – GNSS assistance (A-GNSS) messages</b>		
UBX-MGA-ACK	0x13 0x60	• Multiple GNSS acknowledge message (Output)
UBX-MGA-BDS	0x13 0x03	• BeiDou ephemeris assistance (Input) • BeiDou almanac assistance (Input) • BeiDou health assistance (Input) • BeiDou UTC assistance (Input) • BeiDou ionosphere assistance (Input)
UBX-MGA-DBD	0x13 0x80	• Poll the navigation database (Poll request) • Navigation database dump entry (Input/output)
UBX-MGA-GAL	0x13 0x02	• Galileo ephemeris assistance (Input) • Galileo almanac assistance (Input) • Galileo GPS time offset assistance (Input) • Galileo UTC assistance (Input)
UBX-MGA-GLO	0x13 0x06	• GLONASS ephemeris assistance (Input) • GLONASS almanac assistance (Input) • GLONASS auxiliary time offset assistance (Input)
UBX-MGA-GPS	0x13 0x00	• GPS ephemeris assistance (Input) • GPS almanac assistance (Input) • GPS health assistance (Input) • GPS UTC assistance (Input) • GPS ionosphere assistance (Input)
UBX-MGA-INI	0x13 0x40	• Initial position assistance (Input) • Initial time assistance (Input) • Initial clock drift assistance (Input) • Initial frequency assistance (Input) • Attitude initialization data (Input)
UBX-MGA-QZSS	0x13 0x05	• QZSS ephemeris assistance (Input) • QZSS almanac assistance (Input) • QZSS health assistance (Input)
UBX-MGA-SF	0x13 0x10	• Sensor fusion initialization data (Input/output)
<b>UBX-MON – Monitoring messages</b>		
UBX-MON-COMMS	0x0a 0x36	• Communication port information (Periodic/pollled)
UBX-MON-GNSS	0x0a 0x28	• Information message major GNSS selection (Polled)
UBX-MON-HW	0x0a 0x09	• Hardware status (Periodic/pollled)
UBX-MON-HW2	0x0a 0x0b	• Extended hardware status (Periodic/pollled)
UBX-MON-HW3	0x0a 0x37	• I/O pin status (Periodic/pollled)
UBX-MON-IO	0x0a 0x02	• I/O system status (Periodic/pollled)
UBX-MON-MSGPP	0x0a 0x06	• Message parse and process status (Periodic/pollled)
UBX-MON-PATCH	0x0a 0x27	• Installed patches (Polled)
UBX-MON-RF	0x0a 0x38	• RF information (Periodic/pollled)
UBX-MON-RXBUF	0x0a 0x07	• Receiver buffer status (Periodic/pollled)
UBX-MON-SPAN	0x0a 0x31	• Signal characteristics (Periodic/pollled)
UBX-MON-SPT	0x0a 0x2f	• Sensor production test (Polled)
UBX-MON-SYS	0x0a 0x39	• Current system performance information (Periodic/pollled)
UBX-MON-TXBUF	0x0a 0x08	• Transmitter buffer status (Periodic/pollled)
UBX-MON-VER	0x0a 0x04	• Receiver and software version (Polled)
<b>UBX-NAV – Navigation solution messages</b>		

<b>Message</b>	<b>Class/ID</b>	<b>Description (Type)</b>
UBX-NAV-ATT	0x01 0x05	• Attitude solution (Periodic/pollled)
UBX-NAV-CLOCK	0x01 0x22	• Clock solution (Periodic/pollled)
UBX-NAV-COV	0x01 0x36	• Covariance matrices (Periodic/pollled)
UBX-NAV-DOP	0x01 0x04	• Dilution of precision (Periodic/pollled)
UBX-NAV-EELL	0x01 0x3d	• Position error ellipse parameters (Periodic/pollled)
UBX-NAV-EOE	0x01 0x61	• End of epoch (Periodic)

## 3.9 UBX-ACK (0x05)

The messages in the UBX-ACK class are used to indicate acknowledgement or rejection (i.e. negative acknowledgement) of input messages, such as UBX-CFG messages.

### 3.9.1 UBX-ACK-ACK (0x05 0x01)

#### 3.9.1.1 Message acknowledged

Message	UBX-ACK-ACK					
	<b>Message acknowledged</b>					
Type	Output					
Comment	Output upon processing of an input message. A UBX-ACK-ACK is sent as soon as possible but at least within one second.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x05	0x01	2	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	clsID	-	-	Class ID of the Acknowledged Message
1	U1	msgID	-	-	Message ID of the Acknowledged Message

## 3.9.2 UBX-ACK-NAK (0x05 0x00)

### 3.9.2.1 Message not acknowledged

Message	UBX-ACK-NAK Message not acknowledged					
Type	Output					
Comment	Output upon processing of an input message. A UBX-ACK-NAK is sent as soon as possible but at least within one second.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x05	0x00	2	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	clsID	-	-	Class ID of the Not-Acknowledged Message	
1	U1	msgID	-	-	Message ID of the Not-Acknowledged Message	

## 3.10 UBX-CFG (0x06)

The messages in the UBX-CFG class are used to configure the receiver and poll current configuration values as well as for sending commands to the receiver. Unless stated otherwise, any message in this class sent to the receiver is either acknowledged (by a [UBX-ACK-ACK](#) message) if processed successfully or rejected (with a [UBX-ACK-NAK](#) message) if processed unsuccessfully.

### 3.10.1 UBX-CFG-CFG (0x06 0x09)

#### 3.10.1.1 Clear, save and load configurations

Message	UBX-CFG-CFG Clear, save and load configurations					
Type	Command					
Comment	<p>See <a href="#">Receiver configuration</a> for a detailed description on how receiver configuration should be used. The behavior of this message has changed for protocol versions greater than 23.01. Use UBX-CFG-VALSET and UBX-CFG-VALDEL with the appropriate layers instead. These new messages support selective saving and clearing to retain the behavior removed from this message. The three masks which were used to clear, save and load a subsection of configuration have lost their meaning. It is no longer possible to save or clear a subsection of the configuration using this message. The behavior of the masks is now:</p> <ul style="list-style-type: none"> <li>if any bit is set in the clearMask: all configuration in the selected non-volatile memory is deleted</li> <li>if any bit is set in the saveMask: all current configuration is stored (copied) to the selected layers</li> <li>if any bit is set in the loadMask: The current configuration is discarded and rebuilt from all the lower layers</li> </ul> <p>Note that commands can be combined. The sequence of execution is clear, save, then load.</p> <p> Old functionality of this message is not available in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x09	12 + [0,1]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	

0	X4	clearMask	-	-	Mask for configuration to clear
bits 31...0	U <sub>:32</sub>	clearAll	-	-	Clear all saved configuration from the selected non-volatile memory if any bit is set
4	X4	saveMask	-	-	Mask for configuration to save
bits 31...0	U <sub>:32</sub>	saveAll	-	-	Save all current configuration to the selected non-volatile memory if any bit is set
8	X4	loadMask	-	-	Mask for configuration to load
bits 31...0	U <sub>:32</sub>	loadAll	-	-	Discard current configuration and rebuilt it from lower non-volatile memory layers if any bit is set
<i>Start of optional group</i>					
12	X1	deviceMask	-	-	Mask which selects the memory devices for saving and/or clearing operation Note that if a deviceMask is not provided, the receiver defaults the operation requested to battery-backed RAM (BBR) and Flash (if available)
bit 0	U <sub>:1</sub>	devBBR	-	-	Battery-backed RAM
bit 1	U <sub>:1</sub>	devFlash	-	-	Flash
bit 2	U <sub>:1</sub>	devEEPROM	-	-	EEPROM (only supported for protocol versions less than 14.00)
bit 4	U <sub>:1</sub>	devSpiFlash	-	-	SPI Flash (only supported for protocol versions less than 14.00)
<i>End of optional group</i>					

### 3.10.2 UBX-CFG-RST (0x06 0x04)

#### 3.10.2.1 Reset receiver / Clear backup data structures

<b>Message</b>	<b>UBX-CFG-RST</b>					
	<b>Reset receiver / Clear backup data structures</b>					
<i>Type</i>	Command					
<i>Comment</i>	Do not expect this message to be acknowledged by the receiver. <ul style="list-style-type: none"> <li>Newer FW version will not acknowledge this message at all.</li> <li>Older FW version will acknowledge this message but the acknowledge may not be sent completely before the receiver is reset.</li> </ul>					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x04	4	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	X2	navBbrMask	-	-	BBR sections to clear. The following special sets apply: <ul style="list-style-type: none"> <li>0x0000 Hot start</li> <li>0x0001 Warm start</li> <li>0xFFFF Cold start</li> </ul>	
bit 0	U <sub>:1</sub>	eph	-	-	Ephemeris	
bit 1	U <sub>:1</sub>	alm	-	-	Almanac	
bit 2	U <sub>:1</sub>	health	-	-	Health	
bit 3	U <sub>:1</sub>	klob	-	-	Klobuchar parameters	
bit 4	U <sub>:1</sub>	pos	-	-	Position	
bit 5	U <sub>:1</sub>	clkd	-	-	Clock drift	
bit 6	U <sub>:1</sub>	osc	-	-	Oscillator parameter	

bit 7	U:1	utc	-	-	UTC correction + GPS leap seconds parameters
bit 8	U:1	rtc	-	-	RTC
bit 11	U:1	sfdr	-	-	SFDR Parameters (only available on the ADR/UDR/HPS product variant) and weak signal compensation estimates
bit 12	U:1	vmon	-	-	SFDR Vehicle Monitoring Parameter (only available on the ADR/UDR/HPS product variant)
bit 13	U:1	tct	-	-	TCT Parameters (only available on the ADR/UDR/HPS product variant)
bit 15	U:1	aop	-	-	Autonomous orbit parameters
2	U1	resetMode	-	-	Reset Type <ul style="list-style-type: none"> <li>• 0x00 = Hardware reset (watchdog) immediately</li> <li>• 0x01 = Controlled software reset</li> <li>• 0x02 = Controlled software reset (GNSS only)</li> <li>• 0x04 = Hardware reset (watchdog) after shutdown</li> <li>• 0x08 = Controlled GNSS stop</li> <li>• 0x09 = Controlled GNSS start</li> </ul>
3	U1	reserved0	-	-	Reserved

### 3.10.3 UBX-CFG-SPT (0x06 0x64)

#### 3.10.3.1 Configure and start a sensor production test

<b>Message</b>	<b>UBX-CFG-SPT</b>					
	<b>Configure and start a sensor production test</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	The production test uses the built-in self-test capabilities of an attached sensor. This message is only supported if a sensor is directly connected to the u-blox receiver.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x64	12	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	reserved0	-	-	Reserved	
2	U2	sensorId	-	-	ID of the sensor to be tested; see <a href="#">UBX-MON-SPT</a> for defined IDs	
4	U1[8]	reserved1	-	-	Reserved	

### 3.10.4 UBX-CFG-VALDEL (0x06 0x8c)

#### 3.10.4.1 Delete configuration item values

<b>Message</b>	<b>UBX-CFG-VALDEL</b>					
	<b>Delete configuration item values</b>					
<b>Type</b>	Set					
<b>Comment</b>	Overview: <ul style="list-style-type: none"> <li>• This message can be used to delete saved configuration to effectively revert the item values to defaults.</li> <li>• This message can delete saved configuration from the flash configuration layer and the BBR configuration layer. The changes will not be effective until these layers are loaded into the RAM layer.</li> <li>• This message is limited to containing a maximum of 64 keys up for deletion; i.e. N is a maximum of 64.</li> </ul>					

- This message can be used multiple times and every time the result will be applied immediately. To send this message multiple times with the result being applied at the end, see version 1 of [UBX-CFG-VALDEL](#) that supports transactions.
- This message does not check if the resulting configuration is valid.
- See [Receiver configuration](#) for details.

This message returns a UBX-ACK-NAK and no configuration is applied:

- if any key is unknown to the receiver FW
- if the layer's bitfield does not specify a layer to delete a value from.

Notes:

- If a key is sent multiple times within the same message, then the value is effectively deleted only once.
- Attempting to delete items that have not been set before, or that have already been deleted, is considered a valid request.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x8c	4 + [0..n]·4	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	X1	layers	-	-	The layers where the configuration should be deleted from	
	bit 1 U:1	bbr	-	-	Delete configuration from the BBR layer	
	bit 2 U:1	flash	-	-	Delete configuration from the Flash layer	
2	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
<i>Start of repeated group (N times)</i>						
4 + n·4	U4	keys	-	-	<a href="#">Configuration key IDs</a> of the configuration items to be deleted	
<i>End of repeated group (N times)</i>						

### 3.10.4.2 Delete configuration item values (with transaction)

<b>Message</b>	<b>UBX-CFG-VALDEL</b> <b>Delete configuration item values (with transaction)</b>
<b>Type</b>	Set
<b>Comment</b>	<p>Overview:</p> <ul style="list-style-type: none"> <li>• This message can be used to delete saved configuration to effectively revert them to defaults.</li> <li>• This message can delete saved configuration from the flash configuration layer and the BBR configuration layer. The changes will not be effective until these layers are loaded into the RAM layer.</li> <li>• This message is limited to containing a maximum of 64 keys up for deletion; i.e. N is a maximum of 64.</li> <li>• This message can be used multiple times with the result being managed within a transaction.</li> <li>• This message does not check if the resulting configuration is valid.</li> <li>• See <a href="#">Receiver configuration</a> for details.</li> <li>• See version 0 of <a href="#">UBX-CFG-VALDEL</a> for simplified version of this message.</li> </ul> <p>This message returns a UBX-ACK-NAK, cancels any started transaction, and no configuration is applied:</p> <ul style="list-style-type: none"> <li>• if any key within a transaction is unknown to the receiver FW</li> <li>• if an invalid transaction state transition is requested</li> <li>• if the layer's bitfield changes within a transaction</li> <li>• if the layer's bitfield does not specify a layer to delete a value from.</li> </ul> <p>Notes:</p> <ul style="list-style-type: none"> <li>• Any request for another UBX-CFG- message type (including UBX-CFG-VALSET and UBX-CFG-VALGET) will cancel any started transaction, and no configuration is applied.</li> <li>• This message can be sent with no keys to delete for the purposes of managing the transaction state transition.</li> <li>• If a key is sent multiple times within the same message or within the same transaction, then the value is effectively deleted only once.</li> </ul>

- Attempting to delete items that have not been set before, or that have already been deleted, is considered a valid request.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x8c	4 + [0..n]*4	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x01 for this version)	
1	X1	layers	-	-	The layers where the configuration should be deleted from	
bit 1	U:1	bbr	-	-	Delete configuration from the BBR layer	
bit 2	U:1	flash	-	-	Delete configuration from the Flash layer	
2	X1	transaction	-	-	Transaction action to be applied:	
bits 1...0	U:2	action	-	-	Transaction action to be applied: <ul style="list-style-type: none"> <li>0 = Transactionless UBX-CFG-VALDEL: In the next UBX-CFG-VALDEL, it can be either 0 or 1. If a transaction has not yet been started, the incoming configuration is applied. If a transaction has already been started, cancels any started transaction and the incoming configuration is applied.</li> <li>1 = (Re)Start deletion transaction: In the next UBX-CFG-VALDEL, it can be either 0, 1, 2 or 3. If a transaction has not yet been started, a transaction will be started. If a transaction has already been started, restarts the transaction, effectively removing all previous non-applied UBX-CFG-VALDEL messages.</li> <li>2 = Deletion transaction ongoing: In the next UBX-CFG-VALDEL, it can be either 0, 1, 2 or 3.</li> <li>3 = Apply and end a deletion transaction: In the next UBX-CFG-VALDEL, it can be either 0 or 1.</li> </ul>	
3	U1	reserved0	-	-	Reserved	
<i>Start of repeated group (N times)</i>						
4 + n*4	U4	keys	-	-	Configuration key IDs of the configuration items to be deleted	
<i>End of repeated group (N times)</i>						

### 3.10.5 UBX-CFG-VALGET (0x06 0x8b)

#### 3.10.5.1 Get configuration items

Message	UBX-CFG-VALGET Get configuration items
Type	Poll request
Comment	Overview: <ul style="list-style-type: none"> <li>This message is used to get configuration values by providing a list of configuration key IDs, which identify the configuration items to retrieve.</li> <li>This message can specify the configuration layer where the values of the specified configuration items are retrieved from.</li> <li>This message is limited to containing a maximum of 64 key IDs.</li> <li>See <a href="#">Receiver configuration</a> for details.</li> </ul> This message returns a UBX-ACK-NAK: <ul style="list-style-type: none"> <li>if any key is unknown to the receiver FW</li> <li>if the layer field specifies an invalid layer to get the value from</li> <li>if the keys array specifies more than 64 key IDs.</li> </ul>

**Notes:**

- If a value is requested multiple times within the same poll request, then the reply will contain it multiple times.
- The provided keys can be complete key values (group and item specifiers) or wild-card specifications. A complete key value will constitute a request for one key-value pair. A key value that has a valid group specifier and 0xffff in the item part of the key value (bits 0-15) constitutes a request for all items in the specified group. A key with a value of 0xffff in the group part of the key value (bits 16-27) is a request for all items known to the receiver in all groups.
- The response message is limited to containing a maximum of 64 key-value pairs. If there are wild-card specifications then there may be more than 64 possible responses. In order to handle this, the 'position' field can specify that the response message should skip this number of key-value pairs before it starts constructing the message. This allows a large set of values to be retrieved 64 at a time. If the response contains less than 64 key-value pairs then all values have been reported, otherwise there may be more to read.
- It is not possible to retrieve configuration values for the same configuration item from multiple configuration layers. Separate poll requests must be made for each desired layer.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x8b	4 + [0..n]·4	see below	CK_A CK_B

**Payload description:**

#### 3.10.6.2 Set configuration item values (with transaction)

<b>Message</b>	<b>UBX-CFG-VALSET</b>				
	<b>Set configuration item values (with transaction)</b>				
<i>Type</i>	Set				
<i>Comment</i>	<p>Overview:</p> <ul style="list-style-type: none"> <li>This message is used to set a configuration by providing configuration data (a list of key and value pairs), which identify the configuration items to change, and their new values.</li> </ul>				

- This message is limited to containing a maximum of 64 key-value pairs.
- This message can be used multiple times with the result being managed within a transaction. Within a transaction there is no limit on the number key-value pairs; a transaction is effectively limited to the number of known keys.
- See [Receiver configuration](#) for details.
- See version 0 of [UBX-CFG-VALSET](#) for simplified version of this message.

This message returns a UBX-ACK-NAK, cancels any started transaction, and no configuration is applied:

- if any key within a transaction is unknown to the receiver FW
- if an invalid transaction state transition is requested
- if the layer's bitfield changes within a transaction
- if the layer's bitfield does not specify a layer to save a value to

This message returns a UBX-ACK-NAK, and no configuration is applied:

- if the requested configuration is not valid. While in a transaction context, only the last message that requests to apply the transaction returns a UBX-ACK-NAK. The validity of a configuration is checked only if the message requests to apply the configuration to the RAM configuration layer. This also applies to a transactionless request.

Notes:

- Any request for another UBX-CFG-message type (including UBX-CFG-VALDEL and UBX-CFG-VALGET) will cancel any started transaction, and no configuration is applied.
- This message can be sent with no key/values to set for the purposes of managing the transaction state transition.
- If a key is sent multiple times within the same message or within the same transaction, then the value eventually being applied is the last sent.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum

## 3.11 UBX-ESF (0x10)

The messages in the UBX-ESF class are used to output external sensor fusion information from the receiver.

### 3.11.1 UBX-ESF-ALG (0x10 0x14)

#### 3.11.1.1 IMU alignment information

<b>Message</b>		<b>UBX-ESF-ALG</b>				
		<b>IMU alignment information</b>				
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message outputs the IMU alignment angles which define the rotation from the installation-frame to the IMU-frame. In addition, it indicates the automatic IMU-mount alignment status.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x10	0x14	16	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x01 for this version)	
5	U1	flags	-	-	Flags	
	bit 0	U:1	autoMntAlgOn	-	-	Automatic IMU-mount alignment on/off bit (0: automatic alignment is not running, 1: automatic alignment is running)
	bits 3...1	U:3	status	-	-	Status of the IMU-mount alignment (0: user-defined/ fixed angles are used, 1: IMU-mount roll/pitch angles alignment is ongoing, 2: IMU-mount roll/pitch/yaw angles alignment is ongoing, 3: coarse IMU-mount alignment are used, 4: fine IMU-mount alignment are used)
6	U1	error	-	-	Flags	
	bit 0	U:1	tiltAlgError	-	-	IMU-mount tilt (roll and/or pitch) alignment error (0: no error, 1: error)
	bit 1	U:1	yawAlgError	-	-	IMU-mount yaw alignment error (0: no error, 1: error)
	bit 2	U:1	angleError	-	-	IMU-mount misalignment Euler angle singularity error (0: no error, 1: error). If this error bit is set, the IMU-mount roll and IMU-mount yaw angles cannot uniquely be defined due to the singularity issue happening with installations mounted with a +/- 90 degrees misalignment around pitch axis. This is also known as the 'gimbal-lock' problem affecting rotations described by Euler angles.
7	U1	reserved0	-	-	Reserved	
8	U4	yaw	1e-2	deg	IMU-mount yaw angle [0, 360]	
12	I2	pitch	1e-2	deg	IMU-mount pitch angle [-90, 90]	

14          I2          roll                      1e-2          deg          IMU-mount roll angle [-180, 180]

### 3.11.2 UBX-ESF-CAL (0x10 0x04)

#### 3.11.2.1 Calibrated sensor measurements

<b>Message</b>	<b>UBX-ESF-CAL</b>					
	<b>Calibrated sensor measurements</b>					
<b>Type</b>	Output					
<b>Comment</b>	<p>The message contains calibrated measurements from the active inertial sensors connected to the GNSS receiver directly via hardware interface. The available calibration parameters are applied continuously and 'on the fly', using the most recent estimates produced by the internal sensor fusion algorithm.</p> <p>One message can include a set of sensor readings taken at a common sensor time tag. If multiple sensors are in use with asynchronous sensor time tags, then separate messages are output for each individual sensor time tag.</p> <p>Possible data types for the data field are accelerometer, gyroscope and temperature. For accelerometer and gyroscope, the output rate depends on the output rate of the inertial sensors connected.</p> <p>Temperature readings may be limited to a lower output rate to save communication bandwidth.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

8	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
12	I4	xAngRate	1e-3	deg/s	Compensated x-axis angular rate.
16	I4	yAngRate	1e-3	deg/s	Compensated y-axis angular rate.
20	I4	zAngRate	1e-3	deg/s	Compensated z-axis angular rate.
24	I4	xAccel	1e-2	m/s <sup>2</sup>	Compensated x-axis acceleration (gravity-free).
28	I4	yAccel	1e-2	m/s <sup>2</sup>	Compensated y-axis acceleration (gravity-free).
32	I4	zAccel	1e-2	m/s <sup>2</sup>	Compensated z-axis acceleration (gravity-free).

### 3.11.4 UBX-ESF-MEAS (0x10 0x02)

#### 3.11.4.1 External sensor fusion measurements

<b>Message</b>	<b>UBX-ESF-MEAS</b>					
	<b>External sensor fusion measurements</b>					
<i>Type</i>	Input/output					
<i>Comment</i>	Contains sensor measurements with timestamp. Optionally, can include timestamp that the message was received at the receiver. Multiple measurements can be included in a single message. (1 measurement per sensor type.) See section Sensor data types in the integration manual for details.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x10	0x02	8 + numMeas·4 + [0,1]·4	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	timeTag	-	-	Time tag of measurement generated by external sensor	
4	X2	flags	-	-	Flags. Set all unused bits to zero.	
bits 1...0	U:2	timeMarkSent	-	-	Time mark signal was supplied just prior to sending this message: 0 = none, 1 = on Ext0, 2 = on Ext1	
bit 2	U:1	timeMarkEdge	-	-	Trigger on rising (0) or falling (1) edge of time mark signal	
bit 3	U:1	calibTtagValid	-	-	Calibration time tag available. Always set to zero.	
bits 15...11	U:5	numMeas	-	-	Number of measurements contained in this message (optional, can be obtained from message size)

## 3.12 UBX-INF (0x04)

Messages in the UBX-INF class are used to output strings from the firmware or application code. All messages have an associated type to indicate the nature or priority of the message.

### 3.12.1 UBX-INF-DEBUG (0x04 0x04)

#### 3.12.1.1 ASCII output with debug contents

<b>Message</b>	<b>UBX-INF-DEBUG</b>					
	<b>ASCII output with debug contents</b>					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x04	0x04	[0..n]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
Start of repeated group ( <i>N times</i> )						
0 + n	CH	str	-	-	ASCII Character	
End of repeated group ( <i>N times</i> )						

### 3.12.2 UBX-INF-ERROR (0x04 0x00)

#### 3.12.2.1 ASCII output with error contents

<b>Message</b>	<b>UBX-INF-ERROR</b>					
	<b>ASCII output with error contents</b>					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x04	0x00	[0..n]	see below	CK_A CK_B
Payload description:

Start of repeated group (N times)						
0 + n	CH	str	-	-	ASCII Character	
End of repeated group (N times)						

### 3.12.5 UBX-INF-WARNING (0x04 0x01)

#### 3.12.5.1 ASCII output with warning contents

<b>Message</b>	<b>UBX-INF-WARNING</b>					
	<b>ASCII output with warning contents</b>					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x04	0x01	[0..n]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
Start of repeated group (N times)						
0 + n	CH	str	-	-	ASCII Character	
End of repeated group (N times)						

### 3.13 UBX-MGA (0x13)

The messages in the UBX-MGA class are used for sending GNSS assistance (A-GNSS, aiding) information to the receiver as well as backing up the navigation database from the receiver to a host.

#### 3.13.1 UBX-MGA-ACK (0x13 0x60)

##### 3.13.1.1 Multiple GNSS acknowledge message

<b>Message</b>	<b>UBX-MGA-ACK-DATA0</b>					
	<b>Multiple GNSS acknowledge message</b>					
<i>Type</i>	Output					
<i>Comment</i>	This message is sent by a u-blox receiver to acknowledge the receipt of an assistance message. Acknowledgments are enabled by setting the <a href="#">CFG-NAVSPG-ACKAIDING</a> item. See section Flow control in the integration manual for details.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x13	0x60	8	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	type	-	-	Type of acknowledgment: <ul style="list-style-type: none"> <li>0 = The message was not used by the receiver (see infoCode field for an indication of why)</li> <li>1 = The message was accepted for use by the receiver (the infoCode field will be 0)</li> </ul>	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1	infoCode	-	-	Provides greater information on what the receiver chose to do with the message contents: <ul style="list-style-type: none"> <li>0 = The receiver accepted the data</li> <li>1 = The receiver does not know the time so it cannot use the data (To resolve this a <a href="#">UBX-MGA-INI-TIME_UTC</a> message should be supplied first)</li> <li>2 = The message version is not supported by the receiver</li> <li>3 = The message size does not match the message version</li> <li>4 = The message data could not be stored to the database</li> <li>5 = The receiver is not ready to use the message data</li> <li>6 = The message type is unknown</li> </ul>	
3	U1	msgId	-	-	UBX message ID of the acknowledged message	
4	U1[4]	msgPayload Start	-	-	The first 4 bytes of the acknowledged message's payload	

#### 3.13.2 UBX-MGA-BDS (0x13 0x03)

##### 3.13.2.1 BeiDou ephemeris assistance

<b>Message</b>	<b>UBX-MGA-BDS-EPH</b>					
	<b>BeiDou ephemeris assistance</b>					
<i>Type</i>	Input					
<i>Comment</i>	This message allows the delivery of BeiDou D1/D2 ephemeris assistance to a receiver. See section AssistNow online in the integration manual for details.					

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x03	88	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x01 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1	svId	-	-	BeiDou satellite identifier (see <a href="#">Satellite Numbering</a> )	
3	U1	reserved0	-	-	<a href="#">Reserved</a>

### 3.13.2.3 BeiDou health assistance

<b>Message</b>		<b>UBX-MGA-BDS-HEALTH</b>				
		<b>BeiDou health assistance</b>				
Type	Input					
Comment	This message allows the delivery of BeiDou health assistance from D1/D2 ephemeris to a receiver. See section AssistNow online in the integration manual for details. This message allows the delivery of health assistance data for all satellites with svld 1 to 30.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x03	68	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x04 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1[2]	reserved0	-	-	Reserved	

4	U2[30]	healthCode	-	-	Each two-byte value represents a BeiDou SV (1-30). The 9 LSBs of each byte contain the 9 bit health code from subframe 5 pages 7,8 of the D1 message, and from subframe 5 pages 35,36 of the D2 message.
64	U1[4]	reserved1	-	-	Reserved

### 3.13.2.4 BeiDou UTC assistance

<b>Message</b>	<b>UBX-MGA-BDS-UTC</b> <b>BeiDou UTC assistance</b>					
Type	Input					
Comment	This message allows the delivery of BeiDou UTC assistance to a receiver. See section AssistNow online in the integration manual for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x03	20	see below	CK_A CK_B

11	I1	beta3	2 <sup>^</sup> 16	s/pi <sup>^</sup> 3	Ionospheric parameter beta3
12	U1[4]	reserved1	-	-	Reserved

### 3.13.3 UBXMGA-DBD (0x13 0x80)

#### 3.13.3.1 Poll the navigation database

<b>Message</b>	<b>UBXMGA-DBD</b>					
	<b>Poll the navigation database</b>					
Type	Poll request					
Comment	Poll the whole navigation data base. The receiver will send all available data from its internal database. The receiver will indicate the finish of the transmission with a <a href="#">UBXMGA-ACK</a> . The msgPayloadStart field of the UBXMGA-ACK message will contain a U4 representing the number of UBXMGA-DBD-DATA* messages sent.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x80	0	see below	CK_A CK_B
Payload	This message has no payload.					

#### 3.13.3.2 Navigation database dump entry

<b>Message</b>	<b>UBXMGA-DBD</b>					
	<b>Navigation database dump entry</b>					
Type	Input/output					
Comment	<p>Navigation database entry. The data fields are firmware-specific. Transmission of this type of message will be acknowledged by <a href="#">UBXMGA-ACK</a> messages, if acknowledgment has been enabled.</p> <p>See section AssistNow online in the integration manual for details.</p> <p>The maximum payload size for firmware 2.01 onwards is 164 bytes (which makes the maximum message size 172 bytes).</p> <p> UBXMGA-DBD messages are only intended to be sent back to the same receiver that generated them.</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x80	12 + [0..n]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1[12]	reserved0	-	-	Reserved	
Start of repeated group (N times)						
12 + n	U1	data	-	-	firmware-specific data	
End of repeated group (N times)						

### 3.13.4 UBXMGA-GAL (0x13 0x02)

### 3.13.4.1 Galileo ephemeris assistance

<b>Message</b>	<b>UBX-MGA-GAL-EPH</b>				
	<b>Galileo ephemeris assistance</b>				
Type	Input				
Comment	This message allows the delivery of Galileo ephemeris assistance to a receiver. See section AssistNow online in the integration manual for details.				
Message structure	Header	Class	ID	Length (Bytes)	Payload
	0xb5 0x62	0x13	0x02	76	see below

### 3.13.6.3 GPS health assistance

<b>Message</b>	<b>UBX-MGA-GPS-HEALTH</b>				
	<b>GPS health assistance</b>				
Type	Input				
Comment	This message allows the delivery of GPS health assistance to a receiver. See section AssistNow online in the integration manual for details.				
Message structure	Header	Class	ID	Length (Bytes)	Checksum
	0xb5 0x62	0x13	0x00	40	CK_A CK_B
Payload description:					
Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x04 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	Reserved
4	U1[32]	healthCode	-	-	Each byte represents a GPS SV (1-32). The 6 LSBs of each byte contains the 6 bit health code from subframes 4/5 page 25.
36	U1[4]	reserved1	-	-	Reserved

### 3.13.6.4 GPS UTC assistance

<b>Message</b>	<b>UBX-MGA-GPS-UTC</b>				
	<b>GPS UTC assistance</b>				
Type	Input				
Comment	This message allows the delivery of GPS UTC assistance to a receiver. See section AssistNow online in the integration manual for details.				
Message structure	Header	Class	ID	Length (Bytes)	Checksum
	0xb5 0x62	0x13	0x00	20	CK_A CK_B
Payload description:					
Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x05 for this type)

2	U1[2]	reserved0	-	-	Reserved
4	I4	utcA0	2 <sup>-30</sup>	s	First parameter of UTC polynomial
8	I4	utcA1	2 <sup>-50</sup>	s/s	Second parameter of UTC polynomial

12	I1	utcDtLS	-	s	Delta time due to current leap seconds
13	U1	utcTot	2 <sup>12</sup>	s	UTC parameters reference time of week (GPS time)
14	U1	utcWNt	-	weeks	UTC parameters reference week number (the 8-bit WNt field)
15	U1	utcWNlsf	-	weeks	Week number at the end of which the future leap second becomes effective (the 8-bit WNLSF field)
16	U1	utcDn	-	days	Day number at the end of which the future leap second becomes effective
17	I1	utcDtLSF	-	s	Delta time due to future leap seconds
18	U1[2]	reserved1	-	-	Reserved

### 3.13.6.5 GPS ionosphere assistance

<b>Message</b>	<b>UBX-MGA-GPS-IONO</b> <b>GPS ionosphere assistance</b>					
<b>Type</b>	Input					
<b>Comment</b>	This message allows the delivery of GPS ionospheric assistance to a receiver. See section AssistNow online in the integration manual for details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x13	0x00	16	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	type	-	-	Message type (0x06 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1[2]	reserved0	-	-	Reserved	
4	I1	ionoAlpha0	2 <sup>-30</sup>	s	Ionospheric parameter alpha0 [s]	
5	I1	ionoAlpha1	2 <sup>-27</sup>	s/semi-circle	Ionospheric parameter alpha1 [s/semi-circle]	
6	I1	ionoAlpha2	2 <sup>-24</sup>	s/(semi-circle <sup>2</sup> )	Ionospheric parameter alpha2 [s/semi-circle <sup>2</sup> ]	
7	I1	ionoAlpha3	2 <sup>-24</sup>	s/(semi-circle <sup>3</sup> )	Ionospheric parameter alpha3 [s/semi-circle <sup>3</sup> ]	
8	I1	ionoBeta0	2 <sup>11</sup>	s	Ionospheric parameter beta0 [s]	
9	I1	ionoBeta1	2 <sup>14</sup>	s/semi-circle	Ionospheric parameter beta1 [s/semi-circle]	
10	I1	ionoBeta2	2 <sup>16</sup>	s/(semi-circle <sup>2</sup> )	Ionospheric parameter beta2 [s/semi-circle <sup>2</sup> ]	
11	I1	ionoBeta3	2 <sup>16</sup>	s/(semi-circle <sup>3</sup> )	Ionospheric parameter beta3 [s/semi-circle <sup>3</sup> ]	
12	U1[4]	reserved1	-	-	Reserved	

### 3.13.7 UBX-MGA-INI (0x13 0x40)

#### 3.13.7.1 Initial position assistance

<b>Message</b>	<b>UBX-MGA-INI-POS_XYZ</b> <b>Initial position assistance</b>					
<b>Type</b>	Input					
<b>Comment</b>	This message allows the delivery of initial position assistance to a receiver in cartesian ECEF coordinates. This message is equivalent to the <a href="#">UBX-MGA-INI-POS_LLH</a> message, except for the coordinate system.					

See section AssistNow Online in the integration manual for details.

☞ Supplying position assistance that is inaccurate by more than the specified position accuracy, may lead to substantially degraded receiver performance.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	20	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x00 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	Reserved
4	I4	ecefX	-	cm	WGS84 ECEF X coordinate
8	I4	ecefY	-	cm	WGS84 ECEF Y coordinate
12	I4	ecefZ	-	cm	WGS84 ECEF Z coordinate
16	U4	posAcc	-	cm	Position accuracy (stddev)

### 3.13.7.2 Initial position assistance

Message	UBX-MGA-INI-POS_LLH Initial position assistance
---------	----------------------------------------------------

Type	Input
------	-------

**Comment** This message allows the delivery of initial position assistance to a receiver in WGS84 lat/long/alt coordinates. This message is equivalent to the [UBX-MGA-INI-POS\\_XYZ](#) message, except for the coordinate system.

See section AssistNow online in the integration manual for details.

☞ Supplying position assistance that is inaccurate by more than the specified position accuracy, may lead to substantially degraded receiver performance.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	20	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x01 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	Reserved
4	I4	lat	1e-7	deg	WGS84 Latitude
8	I4	lon	1e-7	deg	WGS84 Longitude
12	I4	alt	-	cm	WGS84 Altitude
16	U4	posAcc	-	cm	Position accuracy (stddev)

### 3.13.7.3 Initial time assistance

Message	UBX-MGA-INI-TIME.UTC Initial time assistance
---------	-------------------------------------------------

Type	Input
------	-------

**Comment** This message allows the delivery of UTC time assistance to a receiver. This message is equivalent to the [UBX-MGA-INI-TIME\\_GNSS](#) message, except for the time base.

See section AssistNow online in the integration manual for details.

☞ Supplying time assistance that is inaccurate by more than the specified time accuracy, may lead to substantially degraded receiver performance.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	24	see below	CK_A CK_B

---

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x10 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	X1	ref	-	-	Reference to be used to set time
bits 3...0	U:4	source	-	-	<ul style="list-style-type: none"> <li>0 = none, i.e. on receipt of message (will be inaccurate!)</li> <li>1 = relative to pulse sent to EXTINT0</li> <li>2 = relative to pulse sent to EXTINT1</li> <li>3-15 = reserved</li> </ul>
bit 4	U:1	fall	-	-	use falling edge of EXTINT pulse (default rising) - only if source is EXTINT
bit 5	U:1	last	-	-	use last EXTINT pulse (default next pulse) - only if source is EXTINT
3	I1	leapSecs	-	s	Number of leap seconds since 1980 (or 0x80 = -128 if unknown)
4	U2	year	-	-	Year
6	U1	month	-	-	Month, starting at 1
7	U1	day	-	-	Day, starting at 1
8	U1	hour	-	-	Hour, from 0 to 23
9	U1	minute	-	-	Minute, from 0 to 59
10	U1	second	-	s	Seconds, from 0 to 59
11	X1	bitfield0	-	-	bitfield:
12	U4	ns	-	ns	Nanoseconds, from 0 to 999,999,999
16	U2	tAccS	-	s	Seconds part of time accuracy
18	U1[2]	reserved0	-	-	<a href="#">Reserved</a>
20	U4	tAccNs	-	ns	Nanoseconds part of time accuracy, from 0 to 999,999,999

### 3.13.7.4 Initial time assistance

---

**Message**    **UBX-MGA-INI-TIME\_GNSS**  
**Initial time assistance**
**Type**        Input

**Comment**     This message allows the delivery of time assistance to a receiver in a chosen GNSS timebase. This message is equivalent to the [UBX-MGA-INI-TIME\\_UTC](#) message, except for the time base.

See section AssistNow online in the integration manual for details.

 Supplying time assistance that is inaccurate by more than the specified time accuracy, may lead to substantially degraded receiver performance.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	24	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x11 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	X1	ref	-	-	Reference to be used to set time
bits 3...0	U:4	source	-	-	<ul style="list-style-type: none"> <li>0 = none, i.e. on receipt of message (will be inaccurate!)</li> </ul>

Bit	Type	Name	Scale	Unit	Description
bit 4	U:1	fall	-	-	use falling edge of EXTINT pulse (default rising) - only if source is EXTINT
bit 5	U:1	last	-	-	use last EXTINT pulse (default next pulse) - only if source is EXTINT
3	U1	gnssId	-	-	Source of time information. Currently supported: <ul style="list-style-type: none"> <li>0 = GPS time</li> <li>2 = Galileo time</li> <li>3 = BeiDou time</li> <li>6 = GLONASS time</li> <li>7 = NavIC time</li> </ul>
4	X1	bitfield0	-	-	bitfield:
5	U1	reserved0	-	-	Reserved
6	U2	week	-	-	GNSS week number
8	U4	tow	-	s	GNSS time of week
12	U4	ns	-	ns	GNSS time of week, nanosecond part from 0 to 999,999,999
16	U2	tAccS	-	s	Seconds part of time accuracy
18	U1[2]	reserved1	-	-	Reserved
20	U4	tAccNs	-	ns	Nanoseconds part of time accuracy, from 0 to 999,999,999

### 3.13.7.5 Initial clock drift assistance

<b>Message</b>		<b>UBX-MGA-INI-CLKD</b>				
		<b>Initial clock drift assistance</b>				
Type	Input					
Comment	<p>This message allows the delivery of clock drift assistance to a receiver. See section AssistNow online in the integration manual for details.</p> <p> Supplying clock drift assistance that is inaccurate by more than the specified accuracy, may lead to substantially degraded receiver performance.</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	12	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x20 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1[2]	reserved0	-	-	Reserved	
4	I4	clkD	-	ns/s	Clock drift	
8	U4	clkDAcc	-	ns/s	Clock drift accuracy	

### 3.13.7.6 Initial frequency assistance

<b>Message</b>		<b>UBX-MGA-INI-FREQ</b>				
		<b>Initial frequency assistance</b>				
Type	Input					
Comment	<p>This message allows the delivery of external frequency assistance to a receiver. See section AssistNow online in the integration manual for details.</p>					

☞ Supplying external frequency assistance that is inaccurate by more than the specified accuracy, may lead to substantially degraded receiver performance.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	12	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x21 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	reserved0	-	-	Reserved
3	X1	flags	-	-	Frequency reference
bits 3...0	U:4	source	-	-	<ul style="list-style-type: none"> <li>0 = frequency available on EXTINT0</li> <li>1 = frequency available on EXTINT1</li> <li>2-15 = reserved</li> </ul>
bit 4	U:1	fall	-	-	use falling edge of EXTINT pulse (default rising)
4	I4	freq	1e-2	Hz	Frequency
8	U4	freqAcc	-	ppb	Frequency accuracy

### 3.13.7.7 Attitude initialization data

Message	UBX-MGA-INI-ATT Attitude initialization data					
Type	Input					
Comment	This message is used to set attitude initialization data.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	28	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x40 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U2	age	-	s	Age of calibration data. (Set to 0 if unknown)
4	I4	roll	1e-5	deg	Vehicle roll.
8	I4	pitch	1e-5	deg	Vehicle pitch.
12	I4	heading	1e-5	deg	Vehicle heading.
16	U4	accRoll	1e-5	deg	Vehicle roll accuracy (if null, roll angle is not available).
20	U4	accPitch	1e-5	deg	Vehicle pitch accuracy (if null, pitch angle is not available).
24	U4	accHeading	1e-5	deg	Vehicle heading accuracy (if null, heading angle is not available).

### 3.13.8 UBX-MGA-QZSS (0x13 0x05)

#### 3.13.8.1 QZSS ephemeris assistance

Message	UBX-MGA-QZSS-EPH QZSS ephemeris assistance					
Type	Input					
Comment	This message allows the delivery of QZSS ephemeris assistance to a receiver. See section AssistNow Online in the integration manual for details.

### 3.13.8.3 QZSS health assistance

<b>Message</b>	<b>UBX-MGA-QZSS-HEALTH</b>					
	<b>QZSS health assistance</b>					
<i>Type</i>	Input					
<i>Comment</i>	This message allows the delivery of QZSS health assistance to a receiver. See section AssistNow Online in the integration manual for details.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x13	0x05	12	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	type	-	-	Message type (0x04 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1[2]	reserved0	-	-	Reserved	

4	U1[5]	healthCode	-	-	Each byte represents a QZSS SV (1-5). The 6 LSBs of each byte contains the 6 bit health code from subframes 4/5, data ID = 3, SV ID = 51
9	U1[3]	reserved1	-	-	Reserved

### 3.13.9 UBX-MGA-SF (0x13 0x10)

#### 3.13.9.1 Sensor fusion initialization data

<b>Message</b>	<b>UBX-MGA-SF-INI</b>					
	<b>Sensor fusion initialization data</b>					
<b>Type</b>	Input/output					
<b>Comment</b>	This message is used to poll and set sensor fusion initialization data.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

## 3.14 UBX-MON (0x0a)

The messages in the UBX-MON class are used to report the receiver status, such as hardware status or I/O subsystem statistics.

### 3.14.1 UBX-MON-COMMS (0x0a 0x36)

#### 3.14.1.1 Communication port information

<b>Message</b>		<b>UBX-MON-COMMS</b>				
		<b>Communication port information</b>				
<i>Type</i>	Periodic/polled					
<i>Comment</i>	Consolidated communications information for all ports. The size of the message is determined by the number of ports that are in use on the receiver. A port is only included if communication, either send or receive, has been initiated on that port.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x36	8 + nPorts·40	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	nPorts	-	-	Number of ports included	
2	X1	txErrors	-	-	TX error bitmask	
	bit 0	U:1 mem	-	-	Memory Allocation error	
	bit 1	U:1 alloc	-	-	Allocation error (TX buffer full)	
3	U1	reserved0	-	-	Reserved	
4	U1[4]	protIds	-		The identifiers of the protocols reported in the msgs array. 0: UBX, 1: NMEA, 2: RTCM2, 5: RTCM3, 6: SPARTN, 0xFF: No protocol reported.	
<i>Start of repeated group (nPorts times)</i>						
8 + n·40	U2	portId	-	-	Unique identifier for the port. See section Communications ports in the integration manual for details.	
10 + n·40	U2	txPending	-	bytes	Number of bytes pending in transmitter buffer	
12 + n·40	U4	txBytes	-	bytes	Number of bytes ever sent	
16 + n·40	U1	txUsage	-	%	Maximum usage transmitter buffer during the last sysmon period	
17 + n·40	U1	txPeakUsage	-	%	Maximum usage transmitter buffer	
18 + n·40	U2	rxPending	-	bytes	Number of bytes in receiver buffer	
20 + n·40	U4	rxBytes	-	bytes	Number of bytes ever received	
24 + n·40	U1	rxUsage	-	%	Maximum usage receiver buffer during the last sysmon period	
25 + n·40	U1	rxPeakUsage	-	%	Maximum usage receiver buffer	
26 + n·40	U2	overrunErrs	-	-	Number of 100 ms timeslots with overrun errors	
28 + n·40	U2[4]	msgs	-	msg	Number of successfully parsed messages for each protocol. The reported protocols are identified through the protIds field.	
36 + n·40	U1[8]	reserved1	-	-	Reserved	
44 + n·40	U4	skipped	-	bytes	Number of skipped bytes	

End of repeated group (*nPorts* times)

### 3.14.2 UBX-MON-GNSS (0x0a 0x28)

#### 3.14.2.1 Information message major GNSS selection

<b>Message</b>		<b>UBX-MON-GNSS</b>				
		<b>Information message major GNSS selection</b>				
Type	Polled					
Comment	This message reports major GNSS selection. It does this by means of bit masks in U1 fields. Each bit in a bit mask corresponds to one major GNSS. Augmentation systems are not reported.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x28	8	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	X1	supported	-	-	A bit mask showing the major GNSS that can be supported by this receiver	
bit 0	U:1	GPSSup	-	-	GPS is supported	
bit 1	U:1	GlonassSup	-	-	GLONASS is supported	
bit 2	U:1	BeidouSup	-	-	BeiDou is supported	
bit 3	U:1	GalileoSup	-	-	Galileo is supported	
2	X1	defaultGnss	-	-	A bit mask showing the default major GNSS selection. If the default major GNSS selection is currently configured in the efuse for this receiver, it takes precedence over the default major GNSS selection configured in the executing firmware of this receiver.	
bit 0	U:1	GPSDef	-	-	GPS is default-enabled	
bit 1	U:1	GlonassDef	-	-	GLONASS is default-enabled	
bit 2	U:1	BeidouDef	-	-	BeiDou is default-enabled	
bit 3	U:1	GalileoDef	-	-	Galileo is default-enabled	
3	X1	enabled	-	-	A bit mask showing the current major GNSS selection enabled for this receiver	
bit 0	U:1	GPSEna	-	-	GPS is enabled	
bit 1	U:1	GlonassEna	-	-	GLONASS is enabled	
bit 2	U:1	BeidouEna	-	-	BeiDou is enabled	
bit 3	U:1	GalileoEna	-	-	Galileo is enabled	
4	U1	simultaneous	-	-	Maximum number of concurrent major GNSS that can be supported by this receiver	
5	U1[3]	reserved0	-	-	Reserved	

### 3.14.3 UBX-MON-HW (0x0a 0x09)

#### 3.14.3.1 Hardware status

<b>Message</b>		<b>UBX-MON-HW</b>	
		<b>Hardware status</b>	
Type	Periodic/pollled		

**Comment** This message is deprecated in this protocol version. Use [UBX-MON-HW3](#) and [UBX-MON-RF](#) instead.  
Status of different aspects of the hardware, such as antenna, PIO/peripheral pins, noise level, automatic gain control (AGC)

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x09	60	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description	
0	X4	pinSel	-	-	Mask of pins set as peripheral/PIO	
4	X4	pinBank	-	-	Mask of pins set as bank A/B	
8	X4	pinDir	-	-	Mask of pins set as input/output	
12	X4	pinVal	-	-	Mask of pins value low/high	
16	U2	noisePerMS	-	-	Noise level as measured by the GPS core	
18	U2	agcCnt	-	-	AGC Monitor, as percentage of maximum gain, range 0 to 8191 (100%)	
20	U1	aStatus	-	-	Status of the antenna supervisor state machine (0=INIT, 1=DONTKNOW, 2=OK, 3=SHORT, 4=OPEN)	
21	U1	aPower	-	-	Current power status of antenna (0=OFF, 1=ON, 2=DONTKNOW)	
22	X1	flags	-	-	Flags	
	bit 0	U <sub>1</sub>	rtcCalib	-	-	RTC is calibrated
	bit 1	U <sub>1</sub>	safeBoot	-	-	Safeboot mode (0 = inactive, 1 = active)
	bits 3...2	U <sub>2</sub>	jammingState	-	-	Output from jamming/interference monitor (0 = unknown or feature disabled or flag unavailable, 1 = ok - no significant jamming, 2 = warning - interference visible but fix OK, 3 = critical - interference visible and no fix). This flag is deprecated in protocol versions that support UBX-SEC-SIG (version 0x02) and always reported as 0; instead jammingState in UBX-SEC-SIG should be monitored.
	bit 4	U <sub>1</sub>	xtalAbsent	-	-	RTC xtal has been determined to be absent (not supported for protocol versions less than 18.00)
23	U1	reserved0	-	-	<a href="#">Reserved</a>	
24	X4	usedMask	-	-	Mask of pins that are used by the virtual pin manager	
28	U1[17]	VP	-	-	Array of pin mappings for each of the 17 physical pins	
45	U1	cwSuppression	-	-	CW interference suppression level, scaled (0 = no CW jamming, 255 = strong CW jamming)	
46	U1[2]	reserved1	-	-	<a href="#">Reserved</a>	
48	X4	pinIrq	-	-	Mask of pins value using the PIO Irq	
52	X4	pullH	-	-	Mask of pins value using the PIO pull high resistor	
56	X4	pullL	-	-	Mask of pins value using the PIO pull low resistor	

### 3.14.4 UBX-MON-HW2 (0x0a 0x0b)

#### 3.14.4.1 Extended hardware status

Message	UBX-MON-HW2 Extended hardware status
Type	Periodic/pollled

**Comment** This message is deprecated in this protocol version. Use [UBX-MON-HW3](#) and [UBX-MON-RF](#) instead.

Status of different aspects of the hardware such as Imbalance, Low-Level Configuration and POST Results. The first four parameters of this message represent the complex signal from the RF front end. The following rules of thumb apply:

- The smaller the absolute value of the variable `ofsI` and `ofsQ`, the better.
- Ideally, the magnitude of the I-part (`magI`) and the Q-part (`magQ`) of the complex signal should be the same.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x0b	28	see below	CK_A CK_B

*Payload description:*

Byte offset	Type	Name	Scale	Unit	Description
0	I1	<code>ofsI</code>	-	-	Imbalance of I-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)
1	U1	<code>magI</code>	-	-	Magnitude of I-part of complex signal, scaled (0 = no signal, 255 = max. magnitude)
2	I1	<code>ofsQ</code>	-	-	Imbalance of Q-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)
3	U1	<code>magQ</code>	-	-	Magnitude of Q-part of complex signal, scaled (0 = no signal, 255 = max. magnitude)
4	U1	<code>cfgSource</code>	-	-	Source of low-level configuration (114 = ROM, 111 = OTP, 112 = config pins, 102 = flash image)
5	U1[3]	<code>reserved0</code>	-	-	Reserved
8	U4	<code>lowLevCfg</code>	-	-	Low-level configuration (obsolete for protocol versions greater than 15.00)
12	U1[8]	<code>reserved1</code>	-	-	Reserved
20	U4	<code>postStatus</code>	-	-	POST status word
24	U1[4]	<code>reserved2</code>	-	-	Reserved

### 3.14.5 UBX-MON-HW3 (0x0a 0x37)

#### 3.14.5.1 I/O pin status

Message	UBX-MON-HW3 I/O pin status					
Type	Periodic/pollled					
Comment	This message contains information specific to each HW I/O pin, for example whether the pin is set as Input or Output. For the antenna supervisor status and other RF status information, see the <a href="#">UBX-MON-RF</a> message.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x37	22 + nPins*6	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	<code>version</code>	-	-	Message version (0x00 for this version)	
1	U1	<code>nPins</code>	-	-	The number of I/O pins included	
2	X1	<code>flags</code>	-	-	Flags	
bit 0	U <sub>1</sub>	<code>rtcCalib</code>	-	-	RTC is calibrated	

bit 1	U:1	safeBoot	-	-	Safeboot mode (0 = inactive, 1 = active)
bit 2	U:1	xtalAbsent	-	-	RTC xtal has been determined to be absent
3	CH[10]	hwVersion	-	-	Zero-terminated hardware version string (same as that returned in the <a href="#">UBX-MON-VER</a> message)
13	U1[9]	reserved0	-	-	<a href="#">Reserved</a>
<i>Start of repeated group (nPins times)</i>					
22 + n·6	U1	reserved1	-	-	<a href="#">Reserved</a>
23 + n·6	U1	pinId	-	-	Identifier for the pin, including both external and internal pins
24 + n·6	X2	pinMask	-	-	Pin mask
bit 0	U:1	periphPIO	-	-	Pin is set to peripheral or PIO? 0=Peripheral 1=PIO
bits 3...1	U:3	pinBank	-	-	Bank the pin belongs to, where 0=A 1=B 2=C 3=D 4=E 5=F 6=G 7=H
bit 4	U:1	direction	-	-	Pin direction? 0=Input 1=Output
bit 5	U:1	value	-	-	Pin value? 0=Low 1=High
bit 6	U:1	vpManager	-	-	Used by virtual pin manager? 0=No 1=Yes
bit 7	U:1	pioIrq	-	-	Interrupt enabled? 0=No 1=Yes
bit 8	U:1	pioPullHigh	-	-	Using pull high resistor? 0=No 1=Yes
bit 9	U:1	pioPullLow	-	-	Using pull low resistor 0=No 1=Yes
26 + n·6	U1	vp	-	-	Virtual pin mapping
27 + n·6	U1	reserved2	-	-	<a href="#">Reserved</a>
<i>End of repeated group (nPins times)</i>					

### 3.14.6 UBX-MON-IO (0x0a 0x02)

#### 3.14.6.1 I/O system status

<b>Message</b>	<b>UBX-MON-IO</b>					
	<b>I/O system status</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b> The size of the message is determined by the number of ports 'N' the receiver supports, i.e. on u-blox 5 the number of ports is 6.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x02	[0..n]·20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
<i>Start of repeated group (N times)</i>						
0 + n·20	U4	rxBytes	-	bytes	Number of bytes ever received	
4 + n·20	U4	txBytes	-	bytes	Number of bytes ever sent	
8 + n·20	U2	parityErrs	-	-	Number of 100 ms timeslots with parity errors	
10 + n·20	U2	framingErrs	-	-	Number of 100 ms timeslots with framing errors	
12 + n·20	U2	overrunErrs	-	-	Number of 100 ms timeslots with overrun errors	
14 + n·20	U2	breakCond	-	-	Number of 100 ms timeslots with break conditions	
16 + n·20	U1[4]	reserved0	-	-	<a href="#">Reserved</a>	

End of repeated group (*N* times)

### 3.14.7 UBX-MON-MSGPP (0x0a 0x06)

#### 3.14.7.1 Message parse and process status

<b>Message</b>	<b>UBX-MON-MSGPP</b>					
	<b>Message parse and process status</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b>					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x06	120	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U2[8]	msg1	-	msgs	Number of successfully parsed messages for each protocol on port0	
16	U2[8]	msg2	-	msgs	Number of successfully parsed messages for each protocol on port1	
32	U2[8]	msg3	-	msgs	Number of successfully parsed messages for each protocol on port2	
48	U2[8]	msg4	-	msgs	Number of successfully parsed messages for each protocol on port3	
64	U2[8]	msg5	-	msgs	Number of successfully parsed messages for each protocol on port4	
80	U2[8]	msg6	-	msgs	Number of successfully parsed messages for each protocol on port5	
96	U4[6]	skipped	-	bytes	Number skipped bytes for each port	

### 3.14.8 UBX-MON-PATCH (0x0a 0x27)

#### 3.14.8.1 Installed patches

<b>Message</b>	<b>UBX-MON-PATCH</b>					
	<b>Installed patches</b>					
<i>Type</i>	Polled					
<i>Comment</i>	This message reports information about patches installed and currently enabled on the receiver. It does not report on patches installed and then disabled. An enabled patch is considered active when the receiver executes from the code space where the patch resides on. For example, a ROM patch is reported active only when the system runs from ROM.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x27	4 + nEntries·16	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U2	version	-	-	Message version (0x0001 for this version)	
2	U2	nEntries	-	-	Total number of reported patches	
<i>Start of repeated group (nEntries times)</i>						
4 + n·16	X4	patchInfo	-	-	Status information about the reported patch	
bit 0	U <sub>1</sub>	activated	-	-	1: the patch is active, 0: otherwise	

bits 2...1	U:2	location	-	-	Indicates where the patch is stored. 0: eFuse, 1: ROM, 2: BBR, 3: file system
8 + n·16	U4	comparator Number	-	-	The number of the comparator
12 + n·16	U4	patchAddress	-	-	The address that is targeted by the patch
16 + n·16	U4	patchData	-	-	The data that is inserted at the patchAddress
<i>End of repeated group (nEntries times)</i>					

### 3.14.9 UBX-MON-RF (0x0a 0x38)

#### 3.14.9.1 RF information

Message	UBX-MON-RF RF information					
Type	Periodic/pollled					
Comment	Information for each RF block. There are as many RF blocks reported as bands supported by this receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x38	4 + nBlocks·24	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	nBlocks	-	-	The number of RF blocks included	
2	U1[2]	reserved0	-	-	Reserved	
<i>Start of repeated group (nBlocks times)</i>						
4 + n·24	U1	blockId	-	-	RF block ID (0 = L1 band, 1 = L2 or L5 band depending on product configuration)	
5 + n·24	X1	flags	-	-	Flags	
	bits 1...0	U:2	jammingState	-	-	Output from jamming/interference monitor (0 = unknown or feature disabled or flag unavailable, 1 = ok - no significant jamming, 2 = warning - interference visible but fix OK, 3 = critical - interference visible and no fix). This flag is deprecated in protocol versions that support UBX-SEC-SIG (version 0x02) and always reported as 0; instead jammingState in UBX-SEC-SIG should be monitored.
6 + n·24	U1	antStatus	-	-	Status of the antenna supervisor state machine (0x00=INIT, 0x01=DONTKNOW, 0x02=OK, 0x03=SHORT, 0x04=OPEN)	
7 + n·24	U1	antPower	-	-	Current power status of antenna (0x00=OFF, 0x01=ON, 0x02=DONTKNOW)	
8 + n·24	U4	postStatus	-	-	POST status word	
12 + n·24	U1[4]	reserved1	-	-	Reserved	
16 + n·24	U2	noisePerMS	-	-	Noise level as measured by the GPS core	
18 + n·24	U2	agcCnt	-	-	AGC Monitor, as percentage of maximum gain, range 0 to 8191 (100%)	
20 + n·24	U1	cwSuppression	-	-	CW interference suppression level, scaled (0=no CW jamming, 255 = strong CW jamming)	
21 + n·24	I1	ofsI	-	-	Imbalance of I-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)	

22 + n·24	U1	magI	-	-	Magnitude of I-part of complex signal, scaled (0 = no signal, 255 = max.magnitude)
23 + n·24	I1	ofsQ	-	-	Imbalance of Q-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)
24 + n·24	U1	magQ	-	-	Magnitude of Q-part of complex signal, scaled (0 = no signal, 255 = max.magnitude)
25 + n·24	U1[3]	reserved2	-	-	<a href="#">Reserved</a>

*End of repeated group (nBlocks times)*

### 3.14.10 UBX-MON-RXBUF (0x0a 0x07)

#### 3.14.10.1 Receiver buffer status

<b>Message</b>	<b>UBX-MON-RXBUF</b>				
	<b>Receiver buffer status</b>				
Type	Periodic/pollled				
Comment	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b>				
Message structure	Header	Class	ID	Length (Bytes)	Checksum
	0xb5 0x62	0x0a	0x07	24	CK_A CK_B
<i>Payload description:</i>					
Byte offset	Type	Name	Scale	Unit	Description
0	U2[6]	pending	-	bytes	Number of bytes pending in receiver buffer for each target
12	U1[6]	usage	-	%	Maximum usage receiver buffer during the last sysmon period for each target
18	U1[6]	peakUsage	-	%	Maximum usage receiver buffer for each target

### 3.14.11 UBX-MON-SPAN (0x0a 0x31)

#### 3.14.11.1 Signal characteristics

<b>Message</b>	<b>UBX-MON-SPAN</b>				
	<b>Signal characteristics</b>				
Type	Periodic/pollled				
Comment	<p>This message is to be used as a basic spectrum analyzer, where it displays one spectrum for each of the receiver's existing RF paths. The spectrum is conveyed with the following parameters: The frequency span in Hz, the frequency bin resolution in Hz, the center frequency in Hz, and 256 bins with amplitude data. Additionally, in order to give further insight on the signal captured by the receiver, the current gain of the internal programmable gain amplifier (PGA) is provided.</p> <p><b>This message gives information for comparative analysis rather than absolute and precise spectrum overview. Users should not expect highly accurate spectrum amplitude.</b></p> <p>Note that the PGA gain is not included in the spectrum data but is available as a separate field. Neither the spectrum, nor the PGA gain considers the internal fixed LNA gain or an external third-party LNA.</p> <p>The center frequency at each bin, assuming a zero-based bin count, can be computed as</p> $f(i) = center + span * (i - 127) / 256$				
Message structure	Header	Class	ID	Length (Bytes)	Checksum

### 3.14.12 UBX-MON-SPT (0x0a 0x2f)

#### 3.14.12.1 Sensor production test

<b>Message</b>	<b>UBX-MON-SPT</b>					
	<b>Sensor production test</b>					
<i>Type</i>	Polled					
<i>Comment</i>	<p>This message reports the state of, and measurements made during, sensor self-tests. This message can also be used to retrieve information about detected sensor(s) and driver(s) used. This message is only supported if a sensor is directly connected to the u-blox chip. This includes modules that contain IMUs.</p> <p>Note that this message shows the status of the last self-test since sensor startup. The self-test results are not stored in non-volatile memory.</p>

### 3.14.14 UBX-MON-TXBUF (0x0a 0x08)

#### 3.14.14.1 Transmitter buffer status

Message	UBX-MON-TXBUF Transmitter buffer status					
Type	Periodic/pollled					
Comment	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x08	28	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U2[6]	pending	-	bytes	Number of bytes pending in transmitter buffer for each target	
12	U1[6]	usage	-	%	Maximum usage transmitter buffer during the last sysmon period for each target	

18	U1[6]	peakUsage	-	%	Maximum usage transmitter buffer for each target
24	U1	tUsage	-	%	Maximum usage of transmitter buffer during the last sysmon period for all targets
25	U1	tPeakusage	-	%	Maximum usage of transmitter buffer for all targets
26	X1	errors	-	-	Error bitmask
	bits 5...0	U:6	limit	-	Buffer limit of corresponding target reached
	bit 6	U:1	mem	-	Memory Allocation error
	bit 7	U:1	alloc	-	Allocation error (TX buffer full)
27	U1	reserved0	-	-	<a href="#">Reserved</a>

### 3.14.15 UBX-MON-VER (0x0a 0x04)

#### 3.14.15.1 Receiver and software version

<b>Message</b>	<b>UBX-MON-VER</b>					
	<b>Receiver and software version</b>					
<i>Type</i>	Polled					
<i>Comment</i>						
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x04	40 + [0..n]·30	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	CH[30]	swVersion	-	-	Nul-terminated software version string.	
30	CH[10]	hwVersion	-	-	Nul-terminated hardware version string	
<i>Start of repeated group (N times)</i>						
40 + n·30	CH[30]	extension	-	-	Extended software information strings. A series of nul-terminated strings. Each extension field is 30 characters long and contains varying software information. Not all extension fields may appear. Examples of reported information: the software version string of the underlying ROM (when the receiver's firmware is running from flash), the firmware version, the supported <a href="#">protocol version</a> , the module identifier, the flash information structure (FIS) file information, the supported major GNSS, the supported augmentation systems. See <a href="#">Firmware and protocol versions</a> for details.	
<i>End of repeated group (N times)</i>						

### 3.15 UBX-NAV (0x01)

The messages in the UBX-NAV class are used to output navigation results and data, such as position, altitude and velocity in a number of formats, and status flags and accuracy estimate figures, or satellite and signal information. The messages are generated with the configured navigation rate.

#### 3.15.1 UBX-NAV-ATT (0x01 0x05)

### 3.15.1.1 Attitude solution

<b>Message</b>	<b>UBX-NAV-ATT</b>					
	<b>Attitude solution</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message outputs the attitude solution as roll, pitch and heading angles. See important comments concerning vehicle attitude given in the Vehicle attitude output section of the integration manual.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x05	32	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1[3]	reserved0	-	-	Reserved	
8	I4	roll	1e-5	deg	Vehicle roll.	
12	I4	pitch	1e-5	deg	Vehicle pitch.	
16	I4	heading	1e-5	deg	Vehicle heading.	
20	U4	accRoll	1e-5	deg	Vehicle roll accuracy (if null, roll angle is not available).	
24	U4	accPitch	1e-5	deg	Vehicle pitch accuracy (if null, pitch angle is not available).	
28	U4	accHeading	1e-5	deg	Vehicle heading accuracy (if null, heading angle is not available).	

### 3.15.2 UBX-NAV-CLOCK (0x01 0x22)

#### 3.15.2.1 Clock solution

<b>Message</b>	<b>UBX-NAV-CLOCK</b>					
	<b>Clock solution</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>						
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x22	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section Navigation epochs in the integration manual for details. See section iTOW timestamps in the integration manual for details.	
4	I4	clkB	-	ns	Clock bias	
8	I4	clkD	-	ns/s	Clock drift	
12	U4	tAcc	-	ns	Time accuracy estimate	
16	U4	fAcc	-	ps/s	Frequency accuracy estimate	

### 3.15.3 UBX-NAV-COV (0x01 0x36)

### 3.15.3.1 Covariance matrices

<b>Message</b>		<b>UBX-NAV-COV</b>				
		<b>Covariance matrices</b>				
Type	Periodic/pollled					
Comment	This message outputs the covariance matrices for the position and velocity solutions in the topocentric coordinate system defined as the local-level North (N), East (E), Down (D) frame. As the covariance matrices are symmetric, only the upper triangular part is output.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x36	64	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	posCovValid	-	-	Position covariance matrix validity flag	
6	U1	velCovValid	-	-	Velocity covariance matrix validity flag	
7	U1[9]	reserved0	-	-	Reserved	
16	R4	posCovNN	-	m <sup>2</sup>	Position covariance matrix value p <sub>NN</sub>	
20	R4	posCovNE	-	m <sup>2</sup>	Position covariance matrix value p <sub>NE</sub>	
24	R4	posCovND	-	m <sup>2</sup>	Position covariance matrix value p <sub>ND</sub>	
28	R4	posCovEE	-	m <sup>2</sup>	Position covariance matrix value p <sub>EE</sub>	
32	R4	posCovED	-	m <sup>2</sup>	Position covariance matrix value p <sub>ED</sub>	
36	R4	posCovDD	-	m <sup>2</sup>	Position covariance matrix value p <sub>DD</sub>	
40	R4	velCovNN	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>NN</sub>	
44	R4	velCovNE	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>NE</sub>	
48	R4	velCovND	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>ND</sub>	
52	R4	velCovEE	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>EE</sub>	
56	R4	velCovED	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>ED</sub>	
60	R4	velCovDD	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>DD</sub>	

### 3.15.4 UBX-NAV-DOP (0x01 0x04)

#### 3.15.4.1 Dilution of precision

<b>Message</b>		<b>UBX-NAV-DOP</b>				
		<b>Dilution of precision</b>				
Type	Periodic/pollled					
Comment	<ul style="list-style-type: none"> <li>DOP values are dimensionless.</li> <li>All DOP values are scaled by a factor of 100. If the unit transmits a value of e.g. 156, the DOP value is 1.56.</li> </ul>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x04	18	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	U2	gDOP	0.01	-	Geometric DOP
6	U2	pDOP	0.01	-	Position DOP
8	U2	tDOP	0.01	-	Time DOP
10	U2	vDOP	0.01	-	Vertical DOP
12	U2	hDOP	0.01	-	Horizontal DOP
14	U2	nDOP	0.01	-	Northing DOP
16	U2	eDOP	0.01	-	Easting DOP

### 3.15.5 UBX-NAV-EELL (0x01 0x3d)

#### 3.15.5.1 Position error ellipse parameters

<b>Message</b>	<b>UBX-NAV-EELL</b> <b>Position error ellipse parameters</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message outputs the error ellipse parameters for the position solutions.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x3d	16	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	reserved0	-	-	Reserved	
6	U2	errEllipse Orient	1e-2	deg	Orientation of semi-major axis of error ellipse (degrees from true north)	
8	U4	errEllipse Major	-	mm	Semi-major axis of error ellipse	
12	U4	errEllipse Minor	-	mm	Semi-minor axis of error ellipse	

### 3.15.6 UBX-NAV-EOE (0x01 0x61)

#### 3.15.6.1 End of epoch

<b>Message</b>	<b>UBX-NAV-EOE</b> <b>End of epoch</b>					
<i>Type</i>	Periodic					
<i>Comment</i>	This message is intended to be used as a marker to collect all navigation messages of an epoch. It is output after all enabled NAV class messages and after all enabled NMEA messages.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x61	4	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
---	----	------	---	----	-----------------------------------------------------------------------------------------------------------------

### 3.15.7 UBX-NAV-GEOFENCE (0x01 0x39)

#### 3.15.7.1 Geofencing status

<b>Message</b>	<b>UBX-NAV-GEOFENCE</b>					
	<b>Geofencing status</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message outputs the evaluated states of all configured geofences for the current epoch's position. See section Geofencing in the integration manual for feature details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x39	8 + numFences*2	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	status	-	-	Geofencing status <ul style="list-style-type: none"> <li>0 - Geofencing not available or not reliable</li> <li>1 - Geofencing active</li> </ul>	
6	U1	numFences	-	-	Number of geofences	
7	U1	combState	-	-	Combined (logical OR) state of all geofences <ul style="list-style-type: none"> <li>0 - Unknown</li> <li>1 - Inside</li> <li>2 - Outside</li> </ul>	
<i>Start of repeated group (numFences times)</i>						
8 + n*2	U1	state	-	-	Geofence state <ul style="list-style-type: none"> <li>0 - Unknown</li> <li>1 - Inside</li> <li>2 - Outside</li> </ul>	
9 + n*2	U1	id	-	-	Geofence ID (0 = not available)	
<i>End of repeated group (numFences times)</i>						

### 3.15.8 UBX-NAV-ODO (0x01 0x09)

#### 3.15.8.1 Odometer solution

<b>Message</b>	<b>UBX-NAV-ODO</b>					
	<b>Odometer solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message outputs the traveled distance since last reset (see <a href="#">UBX-NAV-RESETODO</a> ) together with an associated estimated accuracy and the total cumulated ground distance (can only be reset by a cold start of the receiver).					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x09	20	see below	CK_A CK_B
<i>Payload description:</i>						

Byte offset	Type	Name	Scale	Unit	Description
0	U1	version	-	-	Message version (0x00 for this version)
1	U1[3]	reserved0	-	-	Reserved
4	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
8	U4	distance	-	m	Ground distance since last reset
12	U4	totalDistance	-	m	Total cumulative ground distance
16	U4	distanceStd	-	m	Ground distance accuracy (1-sigma)

### 3.15.9 UBX-NAV-ORB (0x01 0x34)

#### 3.15.9.1 GNSS orbit database info

<b>Message</b>		<b>UBX-NAV-ORB</b>				
		<b>GNSS orbit database info</b>				
Type	Periodic/polled					
Comment	Status of the GNSS orbit database knowledge.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x34	8 + numSv*6	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x01 for this version)

### 3.15.14 UBX-NAV-RELPOSNE (0x01 0x3c)

#### 3.15.14.1 Relative positioning information in NED frame

<b>Message</b>	<b>UBX-NAV-RELPOSNE</b>					
	<b>Relative positioning information in NED frame</b>					
<i>Type</i>	Periodic/poll					
<i>Comment</i>	This message contains the relative position vector from the reference station to the rover, including accuracy figures, in the local topological system defined at the reference station.  The NED frame is defined as the local topological system at the reference station. The relative position vector components in this message, along with their associated accuracies, are given in that local topological system.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

### 3.15.20 UBX-NAV-STATUS (0x01 0x03)

#### 3.15.20.1 Receiver navigation status

Message	UBX-NAV-STATUS					
Type	Receiver navigation status					
Type	Periodic/pollled					
Comment	See important comments concerning validity of position given in section Navigation output filters in the integration manual.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x03	16	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	gpsFix	-	-	GPSfix Type, this value does <b>not</b> qualify a fix as valid and within the limits. See note on flag gpsFixOk below. <ul style="list-style-type: none"> <li>• 0x00 = no fix</li> <li>• 0x01 = dead reckoning only</li> <li>• 0x02 = 2D-fix</li> <li>• 0x03 = 3D-fix</li> <li>• 0x04 = GPS + dead reckoning combined</li> <li>• 0x05 = Time only fix</li> <li>• 0x06..0xff = reserved</li> </ul>	
5	X1	flags	-	-	Navigation Status Flags	
bit 0	U:1	gpsFixOk	-	-	1 = position and velocity valid and within DOP and ACC Masks.	
bit 1	U:1	diffSoln	-	-	1 = differential corrections were applied	
bit 2	U:1	wknSet	-	-	1 = Week Number valid (see section Time validity in the integration manual for details)	
bit 3	U:1	towSet	-	-	1 = Time of Week valid (see section Time validity in the integration manual for details)	
6	X1	fixStat	-	-	Fix Status Information	
bit 0	U:1	diffCorr	-	-	1 = differential corrections available	
bit 1	U:1	carrSolnValid	-	-	1 = valid carrSoln	
bits 7...6	U:2	mapMatching	-	-	map matching status: <ul style="list-style-type: none"> <li>• 00: none</li> <li>• 01: valid but not used, i.e. map matching data was received, but was too old</li> <li>• 10: valid and used, map matching data was applied</li> <li>• 11: valid and used, map matching data was applied. In case of sensor unavailability map matching data enables dead reckoning. This requires map matched latitude/longitude or heading data.</li> </ul>	
7	X1	flags2	-	-	further information about navigation output	
bits 1...0	U:2	psmState	-	-	power save mode state (not supported for protocol versions less than 13.01)	

- 0 = ACQUISITION [or when psm disabled]
- 1 = TRACKING
- 2 = POWER OPTIMIZED TRACKING
- 3 = INACTIVE

bits 4...3	U:2	spooofDetState	-	-	Spoofing detection state (not supported for protocol versions less than 18.00) <ul style="list-style-type: none"> <li>• 0: Unknown or deactivated</li> <li>• 1: No spoofing indicated</li> <li>• 2: Spoofing indicated</li> <li>• 3: Multiple spoofing indications</li> </ul> Note that the spoofing state value only reflects the detector state for the current navigation epoch. As spoofing can be detected most easily at the transition from real signal to spoofing signal, this is also where the detector is triggered the most. I.e. a value of <i>1 - No spoofing indicated</i> does not mean that the receiver is not spoofed, it simply states that the detector was not triggered in this epoch.
bits 7...6	U:2	carrSoln	-	-	Carrier phase range solution status: <ul style="list-style-type: none"> <li>• 0 = no carrier phase range solution</li> <li>• 1 = carrier phase range solution with floating ambiguities</li> <li>• 2 = carrier phase range solution with fixed ambiguities</li> </ul>
8	U4	ttff	-	ms	Time to first fix (millisecond time tag)
12	U4	msss	-	ms	Milliseconds since Startup / Reset

### 3.15.21 UBX-NAV-TIMEBDS (0x01 0x24)

#### 3.15.21.1 BeiDou time solution

<b>Message</b>	<b>UBX-NAV-TIMEBDS</b> <b>BeiDou time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise BDS time of the most recent navigation solution including validity flags and an accuracy estimate.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x24	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U4	SOW	-	s	BDS time of week (rounded to seconds)	
8	I4	fSOW	-	ns	Fractional part of SOW (range: +/-500000000). The precise BDS time of week in seconds is: $SOW + fSOW * 1e-9$	
12	I2	week	-	-	BDS week number of the navigation epoch	
14	I1	leapS	-	s	BDS leap seconds (BDS-UTC)	
15	X1	valid	-	-	Validity Flags	
bit 0	U:1	sowValid	-	-	1 = Valid SOW and fSOW (see section Time validity in the integration manual for details)	

bit 1	U:1	weekValid	-	-	1 = Valid week (see section Time validity in the integration manual for details)
bit 2	U:1	leapSValid	-	-	1 = Valid leap second
16	U4	tAcc	-	ns	Time Accuracy Estimate

### 3.15.22 UBX-NAV-TIMEGAL (0x01 0x25)

#### 3.15.22.1 Galileo time solution

<b>Message</b>	<b>UBX-NAV-TIMEGAL</b> <b>Galileo time solution</b>					
Type	Periodic/pollled					
Comment	This message reports the precise Galileo time of the most recent navigation solution including validity flags and an accuracy estimate.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x25	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U4	galTow	-	s	Galileo time of week (rounded to seconds)	
8	I4	fGalTow	-	ns	Fractional part of the Galileo time of week (range: +/-500000000). The precise Galileo time of week in seconds is: $galTow + fGalTow * 1e-9$	
12	I2	galWno	-	-	Galileo week number	
14	I1	leapS	-	s	Galileo leap seconds (Galileo-UTC)	
15	X1	valid	-	-	Validity Flags	
bit 0	U:1	galTowValid	-	-	1 = Valid galTow and fGalTow (see section Time validity in the integration manual for details)	
bit 1	U:1	galWnoValid	-	-	1 = Valid galWno (see section Time validity in the integration manual for details)	
bit 2	U:1	leapSValid	-	-	1 = Valid leapS	
16	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.15.23 UBX-NAV-TIMEGLO (0x01 0x23)

#### 3.15.23.1 GLONASS time solution

<b>Message</b>	<b>UBX-NAV-TIMEGLO</b> <b>GLONASS time solution</b>					
Type	Periodic/pollled					
Comment	This message reports the precise GLO time of the most recent navigation solution including validity flags and an accuracy estimate.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x23	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U4	TOD	-	s	GLONASS time of day (rounded to integer seconds)	
8	I4	fTOD	-	ns	Fractional part of TOD (range: +/-500000000). The precise GLONASS time of day in seconds is: $TOD + fTOD * 1e-9$	
12	U2	Nt	-	days	Current date (range: 1-1461), starting at 1 from the 1st Jan of the year indicated by N4 and ending at 1461 at the 31st Dec of the third year after that indicated by N4	
14	U1	N4	-	-	Four-year interval number starting from 1996 (1=1996, 2=2000, 3=2004...)	
15	X1	valid	-	-	Validity flags	
	bit 0	U:1	todValid	-	-	1 = Valid TOD and fTOD (see section Time validity in the integration manual for details)
	bit 1	U:1	dateValid	-	-	1 = Valid N4 and Nt (see section Time validity in the integration manual for details)
16	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.15.24 UBX-NAV-TIMEGPS (0x01 0x20)

#### 3.15.24.1 GPS time solution

<b>Message</b>	<b>UBX-NAV-TIMEGPS</b>					
	<b>GPS time solution</b>					
Type	Periodic/pollled					
Comment	This message reports the precise GPS time of the most recent navigation solution including validity flags and an accuracy estimate.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x20	16	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	I4	fTOW	-	ns	Fractional part of iTOW (range: +/-500000). The precise GPS time of week in seconds is: $(iTOW * 1e-3) + (fTOW * 1e-9)$	
8	I2	week	-	-	GPS week number of the navigation epoch	
10	I1	leapS	-	s	GPS leap seconds (GPS-UTC)	
11	X1	valid	-	-	Validity Flags	
	bit 0	U:1	towValid	-	-	1 = Valid GPS time of week (iTOW & fTOW, (see section Time validity in the integration manual for details)
	bit 1	U:1	weekValid	-	-	1 = Valid GPS week number (see section Time validity in the integration manual for details)
	bit 2	U:1	leapSValid	-	-	1 = Valid GPS leap seconds

12 U4 tAcc - ns Time Accuracy Estimate

### 3.15.25 UBX-NAV-TIMELS (0x01 0x26)

#### 3.15.25.1 Leap second event information

<b>Message</b>	<b>UBX-NAV-TIMELS</b>					
	<b>Leap second event information</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	Information about the upcoming leap second event if one is scheduled.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x26	24	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1[3]	reserved0	-	-	Reserved	
8	U1	srcOfCurrLs	-	-	Information source for the current number of leap seconds. <ul style="list-style-type: none"> <li>• 0 = Default (hardcoded in the firmware, can be outdated)</li> <li>• 1 = Derived from time difference between GPS and GLONASS time</li> <li>• 2 = GPS</li> <li>• 3 = SBAS</li> <li>• 4 = BeiDou</li> <li>• 5 = Galileo</li> <li>• 6 = Aided data</li> <li>• 7 = Configured</li> <li>• 8 = NavIC</li> <li>• 255 = Unknown</li> </ul>	
9	I1	currLs	-	s	Current number of leap seconds since start of GPS time (Jan 6, 1980). It reflects how much GPS time is ahead of UTC time. Galileo number of leap seconds is the same as GPS. BeiDou number of leap seconds is 14 less than GPS. GLONASS follows UTC time, so no leap seconds.	
10	U1	srcOfLsChange	-	-	Information source for the future leap second event. <ul style="list-style-type: none"> <li>• 0 = No source</li> <li>• 2 = GPS</li> <li>• 3 = SBAS</li> <li>• 4 = BeiDou</li> <li>• 5 = Galileo</li> <li>• 6 = GLONASS</li> <li>• 7 = NavIC</li> </ul>	
11	I1	lsChange	-	s	Future leap second change if one is scheduled. +1 = positive leap second, -1 = negative leap second, 0 = no future leap second event scheduled or no information available. If the value is 0, then the amount of leap seconds did not change and the event should be ignored.	

12	I4	timeToLsEvent	-	s	Number of seconds until the next leap second event, or from the last leap second event if no future event scheduled. If > 0 event is in the future, = 0 event is now, < 0 event is in the past. Valid only if validTimeToLsEvent = 1.	
16	U2	dateOfLsGps Wn	-	-	GPS week number (WN) of the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1.	
18	U2	dateOfLsGps Dn	-	-	GPS day of week number (DN) for the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1. (GPS and Galileo DN: from 1 = Sun to 7 = Sat. BeiDou DN: from 0 = Sun to 6 = Sat.)	
20	U1[3]	reserved1	-	-	Reserved	
23	X1	valid	-	-	Validity flags	
	bit 0	U:1	validCurrLs	-	-	1 = Valid current number of leap seconds value.
	bit 1	U:1	validTimeToLs Event	-	-	1 = Valid time to next leap second event or from the last leap second event if no future event scheduled.

### 3.15.26 UBX-NAV-TIMEQZSS (0x01 0x27)

#### 3.15.26.1 QZSS time solution

<b>Message</b>	<b>UBX-NAV-TIMEQZSS</b>					
	<b>QZSS time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise QZSS time of the most recent navigation solution including validity flags and an accuracy estimate. See the Clocks and time section in the integration manual for details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x27	20	see below	CK_A CK_B
<b>Payload description:</b>						
<b>Byte offset</b>	<b>Type</b>	<b>Name</b>	<b>Scale</b>	<b>Unit</b>	<b>Description</b>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch.	
4	U4	qzssTow	-	s	QZSS time of week (rounded to seconds)	
8	I4	fQzssTow	-	ns	Fractional part of QZSS time of week (range: +/-500000000). The precise QZSS time of week in seconds is: $qzssTow + (fQzssTow * 1e-9)$	
12	I2	qzssWno	-	-	QZSS week number of the navigation epoch	
14	I1	leapS	-	s	QZSS leap seconds (QZSS-UTC)	
15	X1	valid	-	-	Validity Flags	
	bit 0	U:1	qzssTowValid	-	-	1 = Valid QZSS time of week (qzssTow and fQzssTow)
	bit 1	U:1	qzssWnoValid	-	-	1 = Valid QZSS week number
	bit 2	U:1	leapSValid	-	-	1 = Valid QZSS leap seconds
16	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.15.27 UBX-NAV-TIMEUTC (0x01 0x21)

### 3.15.27.1 UTC time solution

<b>Message</b>		<b>UBX-NAV-TIMEUTC</b>				
		<b>UTC time solution</b>				
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	Note that during a leap second there may be more or less than 60 seconds in a minute. See the description of leap seconds in the integration manual for details.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x21	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U4	tAcc	-	ns	Time accuracy estimate (UTC)	
8	I4	nano	-	ns	Fraction of second, range -1e9 .. 1e9 (UTC)	
12	U2	year	-	y	Year, range 1999..2099 (UTC)	
14	U1	month	-	month	Month, range 1..12 (UTC)	
15	U1	day	-	d	Day of month, range 1..31 (UTC)	
16	U1	hour	-	h	Hour of day, range 0..23 (UTC)	
17	U1	min	-	min	Minute of hour, range 0..59 (UTC)	
18	U1	sec	-	s	Seconds of minute, range 0..60 (UTC)	
19	X1	valid	-	-	Validity Flags	
	bit 0	U <sub>:1</sub>	validTOW	-	-	1 = Valid Time of Week (see section Time validity in the integration manual for details)
	bit 1	U <sub>:1</sub>	validWKN	-	-	1 = Valid Week Number (see section Time validity in the integration manual for details)
	bit 2	U <sub>:1</sub>	validUTC	-	-	1 = Valid UTC Time
	bits 7...4	U <sub>:4</sub>	utcStandard	-	-	UTC standard identifier. (Not supported for protocol versions less than 15.00) <ul style="list-style-type: none"> <li>• 0 = Information not available</li> <li>• 1 = Communications Research Laboratory (CRL), Tokyo, Japan</li> <li>• 2 = National Institute of Standards and Technology (NIST)</li> <li>• 3 = U.S. Naval Observatory (USNO)</li> <li>• 4 = International Bureau of Weights and Measures (BIPM)</li> <li>• 5 = European laboratories</li> <li>• 6 = Former Soviet Union (SU)</li> <li>• 7 = National Time Service Center (NTSC), China</li> <li>• 8 = National Physics Laboratory India (NPLI)</li> <li>• 15 = Unknown</li> </ul>

### 3.15.28 UBX-NAV-VELECEF (0x01 0x11)

#### 3.15.28.1 Velocity solution in ECEF

<b>Message</b>		<b>UBX-NAV-VELECEF</b>				
		<b>Velocity solution in ECEF</b>				
<i>Type</i>	Periodic/pollled					

**Comment** See important comments concerning validity of position given in section Navigation output filters in the integration manual.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x11	20	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	I4	ecefVX	-	cm/s	ECEF X velocity
8	I4	ecefVY	-	cm/s	ECEF Y velocity
12	I4	ecefVZ	-	cm/s	ECEF Z velocity
16	U4	sAcc	-	cm/s	Speed accuracy estimate

### 3.15.29 UBX-NAV-VELNED (0x01 0x12)

#### 3.15.29.1 Velocity solution in NED frame

**Message** UBX-NAV-VELNED  
Velocity solution in NED frame

**Type** Periodic/pollled

**Comment** See important comments concerning validity of position given in section Navigation output filters in the integration manual.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x12	36	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	I4	velN	-	cm/s	North velocity component
8	I4	velE	-	cm/s	East velocity component
12	I4	velD	-	cm/s	Down velocity component
16	U4	speed	-	cm/s	Speed (3-D)
20	U4	gSpeed	-	cm/s	Ground speed (2-D)
24	I4	heading	1e-5	deg	Heading of motion 2-D
28	U4	sAcc	-	cm/s	Speed accuracy Estimate
32	U4	cAcc	1e-5	deg	Course / Heading accuracy estimate

### 3.16 UBX-NAV2 (0x29)

The messages in the UBX-NAV2 class are used to output navigation results and data, such as position, altitude and velocity in a number of formats, and status flags and accuracy estimate figures, or satellite and signal information. The messages are generated with the configured navigation rate.

#### 3.16.1 UBX-NAV2-CLOCK (0x29 0x22)

### 3.16.1.1 Clock solution

<b>Message</b>		<b>UBX-NAV2-CLOCK</b>				
		<b>Clock solution</b>				
Type	Periodic/pollled					
<i>Comment</i>						
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x22	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section Navigation epochs in the integration manual for details. See section iTOW timestamps in the integration manual for details.	
4	I4	clkB	-	ns	Clock bias	
8	I4	clkD	-	ns/s	Clock drift	
12	U4	tAcc	-	ns	Time accuracy estimate	
16	U4	fAcc	-	ps/s	Frequency accuracy estimate	

### 3.16.2 UBX-NAV2-COV (0x29 0x36)

#### 3.16.2.1 Covariance matrices

<b>Message</b>		<b>UBX-NAV2-COV</b>				
		<b>Covariance matrices</b>				
Type	Periodic/pollled					
<i>Comment</i>						
This message outputs the covariance matrices for the position and velocity solutions in the topocentric coordinate system defined as the local-level North (N), East (E), Down (D) frame. As the covariance matrices are symmetric, only the upper triangular part is output.						
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x36	64	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	posCovValid	-	-	Position covariance matrix validity flag	
6	U1	velCovValid	-	-	Velocity covariance matrix validity flag	
7	U1[9]	reserved0	-	-	Reserved	
16	R4	posCovNN	-	m <sup>2</sup>	Position covariance matrix value p <sub>NN</sub>	
20	R4	posCovNE	-	m <sup>2</sup>	Position covariance matrix value p <sub>NE</sub>	
24	R4	posCovND	-	m <sup>2</sup>	Position covariance matrix value p <sub>ND</sub>	
28	R4	posCovEE	-	m <sup>2</sup>	Position covariance matrix value p <sub>EE</sub>	
32	R4	posCovED	-	m <sup>2</sup>	Position covariance matrix value p <sub>ED</sub>	
36	R4	posCovDD	-	m <sup>2</sup>	Position covariance matrix value p <sub>DD</sub>	
40	R4	velCovNN	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>NN</sub>	

44	R4	velCovNE	-	$m^2/s^2$	Velocity covariance matrix value v_NE
48	R4	velCovND	-	$m^2/s^2$	Velocity covariance matrix value v_ND
52	R4	velCovEE	-	$m^2/s^2$	Velocity covariance matrix value v_EE
56	R4	velCovED	-	$m^2/s^2$	Velocity covariance matrix value v_ED
60	R4	velCovDD	-	$m^2/s^2$	Velocity covariance matrix value v_DD

### 3.16.3 UBX-NAV2-DOP (0x29 0x04)

#### 3.16.3.1 Dilution of precision

<b>Message</b>	<b>UBX-NAV2-DOP</b>					
	<b>Dilution of precision</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	<ul style="list-style-type: none"> <li>DOP values are dimensionless.</li> <li>All DOP values are scaled by a factor of 100. If the unit transmits a value of e.g. 156, the DOP value is 1.56.</li> </ul>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x04	18	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U2	gDOP	0.01	-	Geometric DOP	
6	U2	pDOP	0.01	-	Position DOP	
8	U2	tDOP	0.01	-	Time DOP	
10	U2	vDOP	0.01	-	Vertical DOP	
12	U2	hDOP	0.01	-	Horizontal DOP	
14	U2	nDOP	0.01	-	Northing DOP	
16	U2	eDOP	0.01	-	Easting DOP	

### 3.16.4 UBX-NAV2-EELL (0x29 0x3d)

#### 3.16.4.1 Position error ellipse parameters

<b>Message</b>	<b>UBX-NAV2-EELL</b>					
	<b>Position error ellipse parameters</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message outputs the error ellipse parameters for the position solutions.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x3d	16	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	reserved0	-	-	Reserved	

6	U2	errEllipse Orient	1e-2	deg	Orientation of semi-major axis of error ellipse (degrees from true north)
8	U4	errEllipse Major	-	mm	Semi-major axis of error ellipse
12	U4	errEllipse Minor	-	mm	Semi-minor axis of error ellipse

### 3.16.5 UBX-NAV2-EOE (0x29 0x61)

#### 3.16.5.1 End of epoch

<b>Message</b>	<b>UBX-NAV2-EOE</b> <b>End of epoch</b>					
Type	Periodic					
Comment	This message is intended to be used as a marker to collect all navigation messages of an epoch. It is output after all enabled NAV class messages and after all enabled NMEA messages.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x61	4	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	

### 3.16.6 UBX-NAV2-ODO (0x29 0x09)

#### 3.16.6.1 Odometer solution

<b>Message</b>	<b>UBX-NAV2-ODO</b> <b>Odometer solution</b>					
Type	Periodic/pollable					
Comment	This message outputs the traveled distance since last reset (see <a href="#">UBX-NAV-RESETODO</a> ) together with an associated estimated accuracy and the total cumulated ground distance (can only be reset by a cold start of the receiver).					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x09	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1[3]	reserved0	-	-	<a href="#">Reserved</a>	
4	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
8	U4	distance	-	m	Ground distance since last reset	
12	U4	totalDistance	-	m	Total cumulative ground distance	
16	U4	distanceStd	-	m	Ground distance accuracy (1-sigma)	

### 3.16.7 UBX-NAV2-POSECEF (0x29 0x01)

### 3.16.7.1 Position solution in ECEF

<b>Message</b>	<b>UBX-NAV2-POSECEF</b> <b>Position solution in ECEF</b>					
Type	Periodic/pollled					
Comment	See important comments concerning validity of position given in section Navigation output filters in the integration manual.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x01	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	I4	ecefX	-	cm	ECEF X coordinate	
8	I4	ecefY	-	cm	ECEF Y coordinate	
12	I4	ecefZ	-	cm	ECEF Z coordinate	
16	U4	pAcc	-	cm	Position Accuracy Estimate	

### 3.16.8 UBX-NAV2-POSLLH (0x29 0x02)

#### 3.16.8.1 Geodetic position solution

<b>Message</b>	<b>UBX-NAV2-POSLLH</b> <b>Geodetic position solution</b>					
Type	Periodic/pollled					
Comment	See important comments concerning validity of position given in section Navigation output filters in the integration manual.  This message outputs the Geodetic position in the currently selected ellipsoid. The default is the WGS84 Ellipsoid, but can be changed with the message <a href="#">CFG-NAVSPG-USE_USRDAT</a> .					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x02	28	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	I4	lon	1e-7	deg	Longitude	
8	I4	lat	1e-7	deg	Latitude	
12	I4	height	-	mm	Height above ellipsoid	
16	I4	hMSL	-	mm	Height above mean sea level	
20	U4	hAcc	-	mm	Horizontal accuracy estimate	
24	U4	vAcc	-	mm	Vertical accuracy estimate	

### 3.16.9 UBX-NAV2-PVAT (0x29 0x17)

### 3.16.9.1 Navigation position velocity attitude time solution

<b>Message</b>	<b>UBX-NAV2-PVAT</b>				
	<b>Navigation position velocity attitude time solution</b>				
<i>Type</i>	Periodic/pollled				
<i>Comment</i>	This message combines position, velocity, attitude and time solution, including accuracy figures. Note that during a leap second there may be more or less than 60 seconds in a minute. See description of leap seconds in the integration manual for details.				
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>
	0xb5 0x62	0x29	0x17	116	see below
<i>Payload description:</i>					
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	U1	version	-	-	Message version (0x00 for this version)
5	X1	valid	-	-	Validity flags
bit 0	U:1	validDate	-	-	1 = valid UTC Date (see section Time validity in the integration manual for details)
bit 1	U:1	validTime	-	-	1 = valid UTC time of day (see section Time validity in the integration manual for details)
bit 2	U:1	fullyResolved	-	-	1 = UTC time of day has been fully resolved (no seconds uncertainty). Cannot be used to check if time is completely solved.
bit 3	U:1	validMag	-	-	1 = valid magnetic declination
6	U2	year	-	y	Year (UTC)
8	U1	month	-	month	Month, range 1..12 (UTC)
9	U1	day	-	d	Day of month, range 1..31 (UTC)
10	U1	hour	-	h	Hour of day, range 0..23 (UTC)
11	U1	min	-	min	Minute of hour, range 0..59 (UTC)
12	U1	sec	-	s	Seconds of minute, range 0..60 (UTC)
13	U1	reserved0	-	-	Reserved
14	U1[2]	reserved1	-	-	Reserved
16	U4	tAcc	-	ns	Time accuracy estimate (UTC)
20	I4	nano	-	ns	Fraction of second, range -1e9 .. 1e9 (UTC)
24	U1	fixType	-	-	GNSSfix Type: <ul style="list-style-type: none"> <li>0 = no fix</li> <li>1 = dead reckoning only</li> <li>2 = 2D-fix</li> <li>3 = 3D-fix</li> <li>4 = GNSS + dead reckoning combined</li> <li>5 = time only fix</li> </ul>
25	X1	flags	-	-	Fix status flags
bit 0	U:1	gnssFixOK	-	-	1 = valid fix (i.e within DOP & accuracy masks)
bit 1	U:1	diffSoln	-	-	1 = differential corrections were applied
bit 3	U:1	vehRollValid	-	-	1 = roll of vehicle is valid, only set if the receiver is in sensor fusion mode

bit 4	U:1	vehPitchValid	-	-	1 = pitch of vehicle is valid, only set if the receiver is in sensor fusion mode
bit 5	U:1	vehHeadingValid	-	-	1 = heading of vehicle is valid, only set if the receiver is in sensor fusion mode
bits 7...6	U:2	carrSoln	-	-	Carrier range solution status: <ul style="list-style-type: none"> <li>• 0 = no carrier range solution</li> <li>• 1 = carrier range solution with float ambiguities</li> <li>• 2 = carrier range solution with fixed ambiguities</li> </ul>
26	X1	flags2	-	-	Additional flags
bit 5	U:1	confirmedAvai	-	-	1 = information about UTC Date and Time of Day validity confirmation is available (see section Time validity in the integration manual for details)
bit 6	U:1	confirmedDate	-	-	1 = UTC Date validity could be confirmed (see section Time validity in the integration manual for details)
bit 7	U:1	confirmedTime	-	-	1 = UTC Time of Day could be confirmed (see section Time validity in the integration manual for details)
27	U1	numSV	-	-	Number of satellites used in Nav Solution

	bit 0	U <sub>1</sub>	validDate	-	-	1 = valid UTC Date (see section Time validity in the integration manual for details)
	bit 1	U <sub>1</sub>	validTime	-	-	1 = valid UTC time of day (see section Time validity in the integration manual for details)
	bit 2	U <sub>1</sub>	fullyResolved	-	-	1 = UTC time of day has been fully resolved (no seconds uncertainty). Cannot be used to check if time is completely solved.
	bit 3	U <sub>1</sub>	validMag	-	-	1 = valid magnetic declination
12	U4	tAcc	-	ns	Time accuracy estimate (UTC)	
16	I4	nano	-	ns	Fraction of second, range -1e9 .. 1e9 (UTC)	
20	U1	fixType	-	-	GNSSfix Type: <ul style="list-style-type: none"> <li>0 = no fix</li> <li>1 = dead reckoning only</li> <li>2 = 2D-fix</li> <li>3 = 3D-fix</li> <li>4 = GNSS + dead reckoning combined</li> <li>5 = time only fix</li> </ul>	
21	X1	flags	-	-	Fix status flags	
	bit 0	U <sub>1</sub>	gnssFixOK	-	-	1 = valid fix (i.e within DOP & accuracy masks)
	bit 1	U <sub>1</sub>	diffSoln	-	-	1 = differential corrections were applied
	bits 4...2	U <sub>3</sub>	psmState	-	-	Power save mode state (see Power management section in the integration manual for details).

					<ul style="list-style-type: none"> <li>• 0 = PSM is not active</li> <li>• 1 = Enabled (an intermediate state before Acquisition state)</li> <li>• 2 = Acquisition</li> <li>• 3 = Tracking</li> <li>• 4 = Power Optimized Tracking</li> <li>• 5 = Inactive</li> </ul>	
	bit 5	U:1	headVehValid	-	-	1 = heading of vehicle is valid, only set if the receiver is in sensor fusion mode
	bits 7...6	U:2	carrSoln	-	-	Carrier phase range solution status: <ul style="list-style-type: none"> <li>• 0 = no carrier phase range solution</li> <li>• 1 = carrier phase range solution with floating ambiguities</li> <li>• 2 = carrier phase range solution with fixed ambiguities</li> </ul> (not supported for protocol versions less than 20.00)
22		X1	flags2	-	-	Additional flags
	bit 5	U:1	confirmedAvai	-	-	1 = information about UTC Date and Time of Day validity confirmation is available (see section Time validity in the integration manual for details) This flag is only supported in <a href="#">Protocol Versions 19.00, 19.10, 20.10, 20.20, 20.30, 22.00, 23.00, 23.01, 27 and 28</a> .
	bit 6	U:1	confirmedDate	-	-	1 = UTC Date validity could be confirmed (see section Time validity in the integration manual for details)
	bit 7	U:1	confirmedTime	-	-	1 = UTC Time of Day could be confirmed (see section Time validity in the integration manual for details)
23		U1	numSV	-	-	Number of satellites used in Nav Solution
24		I4	lon	1e-7	deg	Longitude
28		I4	lat	1e-7	deg	Latitude
32		I4	height	-	mm	Height above ellipsoid
36		I4	hMSL	-	mm	Height above mean sea level
40		U4	hAcc	-	mm	Horizontal accuracy estimate
44		U4	vAcc	-	mm	Vertical accuracy estimate
48		I4	velN	-	mm/s	NED north velocity
52		I4	velE	-	mm/s	NED east velocity
56		I4	velD	-	mm/s	NED down velocity
60		I4	gSpeed	-	mm/s	Ground Speed (2-D)
64		I4	headMot	1e-5	deg	Heading of motion (2-D)
68		U4	sAcc	-	mm/s	Speed accuracy estimate
72		U4	headAcc	1e-5	deg	Heading accuracy estimate (both motion and vehicle)
76		U2	pDOP	0.01	-	Position DOP
78		X2	flags3	-	-	Additional flags
	bit 0	U:1	invalidLlh	-	-	1 = Invalid lon, lat, height and hMSL
	bits 4...1	U:4	lastCorrection Age	-	-	Age of the most recently received differential correction: <ul style="list-style-type: none"> <li>• 0 = Not available</li> <li>• 1 = Age between 0 and 1 second</li> <li>• 2 = Age between 1 (inclusive) and 2 seconds</li> <li>• 3 = Age between 2 (inclusive) and 5 seconds</li> </ul>

- 4 = Age between 5 (inclusive) and 10 seconds
- 5 = Age between 10 (inclusive) and 15 seconds
- 6 = Age between 15 (inclusive) and 20 seconds
- 7 = Age between 20 (inclusive) and 30 seconds
- 8 = Age between 30 (inclusive) and 45 seconds
- 9 = Age between 45 (inclusive) and 60 seconds
- 10 = Age between 60 (inclusive) and 90 seconds
- 11 = Age between 90 (inclusive) and 120 seconds
- >=12 = Age greater or equal than 120 seconds

80	U1[4]	reserved0	-	-	Reserved
84	I4	headVeh	1e-5	deg	Heading of vehicle (2-D), this is only valid when headVehValid is set, otherwise the output is set to the heading of motion
88	I2	magDec	1e-2	deg	Magnetic declination. Only supported in ADR 4.10 and later.
90	U2	magAcc	1e-2	deg	Magnetic declination accuracy. Only supported in ADR 4.10 and later.

### 3.16.11 UBX-NAV2-SAT (0x29 0x35)

#### 3.16.11.1 Satellite information

<b>Message</b>	<b>UBX-NAV2-SAT</b>					
	<b>Satellite information</b>					
<i>Type</i>	Periodic/polled					
<i>Comment</i>	This message displays information about SVs that are either known to be visible or currently tracked by the receiver. All signal related information corresponds to the subset of signals specified in <a href="#">Signal Identifiers</a> .

### 3.16.15 UBX-NAV2-STATUS (0x29 0x03)

#### 3.16.15.1 Receiver navigation status

<b>Message</b>	<b>UBX-NAV2-STATUS</b>				
	<b>Receiver navigation status</b>				
<i>Type</i>	Periodic/pollled				
<i>Comment</i>	See important comments concerning validity of position given in section Navigation output filters in the integration manual.				
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>
	0xb5 0x62	0x29	0x03	16	see below
<i>Payload description:</i>					
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	U1	gpsFix	-	-	GPSfix Type, this value does <b>not</b> qualify a fix as valid and within the limits. See note on flag gpsFixOk below. <ul style="list-style-type: none"> <li>• 0x00 = no fix</li> <li>• 0x01 = dead reckoning only</li> <li>• 0x02 = 2D-fix</li> <li>• 0x03 = 3D-fix</li> <li>• 0x04 = GPS + dead reckoning combined</li> <li>• 0x05 = Time only fix</li> <li>• 0x06..0xff = reserved</li> </ul>
5	X1	flags	-	-	Navigation Status Flags
bit 0	U:1	gpsFixOk	-	-	1 = position and velocity valid and within DOP and ACC Masks.
bit 1	U:1	diffSoln	-	-	1 = differential corrections were applied
bit 2	U:1	wknSet	-	-	1 = Week Number valid (see section Time validity in the integration manual for details)
bit 3	U:1	towSet	-	-	1 = Time of Week valid (see section Time validity in the integration manual for details)
6	X1	fixStat	-	-	Fix Status Information
bit 0	U:1	diffCorr	-	-	1 = differential corrections available

bit 1	U:1	carrSolnValid	-	-	1 = valid carrSoln
bits 7...6	U:2	mapMatching	-	-	map matching status: <ul style="list-style-type: none"> <li>• 00: none</li> <li>• 01: valid but not used, i.e. map matching data was received, but was too old</li> <li>• 10: valid and used, map matching data was applied</li> <li>• 11: valid and used, map matching data was applied. In case of sensor unavailability map matching data enables dead reckoning. This requires map matched latitude/longitude or heading data.</li> </ul>
7	X1	flags2	-	-	further information about navigation output
bits 1...0	U:2	psmState	-	-	power save mode state (not supported for protocol versions less than 13.01) <ul style="list-style-type: none"> <li>• 0 = ACQUISITION [or when psm disabled]</li> <li>• 1 = TRACKING</li> <li>• 2 = POWER OPTIMIZED TRACKING</li> <li>• 3 = INACTIVE</li> </ul>
bits 4...3	U:2	spooofDetState	-	-	Spooofing detection state (not supported for protocol versions less than 18.00) <ul style="list-style-type: none"> <li>• 0: Unknown or deactivated</li> <li>• 1: No spooofing indicated</li> <li>• 2: Spooofing indicated</li> <li>• 3: Multiple spooofing indications</li> </ul> <p>Note that the spooofing state value only reflects the detector state for the current navigation epoch. As spooofing can be detected most easily at the transition from real signal to spooofing signal, this is also where the detector is triggered the most. I.e. a value of 1 - <i>No spooofing indicated</i> does not mean that the receiver is not spooofed, it simply states that the detector was not triggered in this epoch.</p>
bits 7...6	U:2	carrSoln	-	-	Carrier phase range solution status: <ul style="list-style-type: none"> <li>• 0 = no carrier phase range solution</li> <li>• 1 = carrier phase range solution with floating ambiguities</li> <li>• 2 = carrier phase range solution with fixed ambiguities</li> </ul>
8	U4	ttff	-	ms	Time to first fix (millisecond time tag)
12	U4	msss	-	ms	Milliseconds since Startup / Reset

### 3.16.16 UBX-NAV2-TIMEBDS (0x29 0x24)

#### 3.16.16.1 BeiDou time solution

<b>Message</b>	<b>UBX-NAV2-TIMEBDS</b> <b>BeiDou time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise BDS time of the most recent navigation solution including validity flags and an accuracy estimate.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x24	20	see below	CK_A CK_B
<b>Payload description:</b>						
<b>Byte offset</b>	<b>Type</b>	<b>Name</b>	<b>Scale</b>	<b>Unit</b>	<b>Description</b>	

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U4	SOW	-	s	BDS time of week (rounded to seconds)	
8	I4	fSOW	-	ns	Fractional part of SOW (range: +/-500000000). The precise BDS time of week in seconds is: $SOW + fSOW * 1e-9$	
12	I2	week	-	-	BDS week number of the navigation epoch	
14	I1	leapS	-	s	BDS leap seconds (BDS-UTC)	
15	X1	valid	-	-	Validity Flags	
	bit 0	U:1	sowValid	-	-	1 = Valid SOW and fSOW (see section Time validity in the integration manual for details)
	bit 1	U:1	weekValid	-	-	1 = Valid week (see section Time validity in the integration manual for details)
	bit 2	U:1	leapSValid	-	-	1 = Valid leap second
16	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.16.17 UBX-NAV2-TIMEGAL (0x29 0x25)

#### 3.16.17.1 Galileo time solution

<b>Message</b>	<b>UBX-NAV2-TIMEGAL</b> <b>Galileo time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise Galileo time of the most recent navigation solution including validity flags and an accuracy estimate.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x25	20	see below	CK_A CK_B
<b>Payload description:</b>						
<b>Byte offset</b>	<b>Type</b>	<b>Name</b>	<b>Scale</b>	<b>Unit</b>	<b>Description</b>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U4	galTow	-	s	Galileo time of week (rounded to seconds)	
8	I4	fGalTow	-	ns	Fractional part of the Galileo time of week (range: +/-500000000). The precise Galileo time of week in seconds is: $galTow + fGalTow * 1e-9$	
12	I2	galWno	-	-	Galileo week number	
14	I1	leapS	-	s	Galileo leap seconds (Galileo-UTC)	
15	X1	valid	-	-	Validity Flags	
	bit 0	U:1	galTowValid	-	-	1 = Valid galTow and fGalTow (see section Time validity in the integration manual for details)
	bit 1	U:1	galWnoValid	-	-	1 = Valid galWno (see section Time validity in the integration manual for details)
	bit 2	U:1	leapSValid	-	-	1 = Valid leapS

16	U4	tAcc	-	ns	Time Accuracy Estimate
----	----	------	---	----	------------------------

### 3.16.18 UBX-NAV2-TIMEGLO (0x29 0x23)

#### 3.16.18.1 GLONASS time solution

<b>Message</b>	<b>UBX-NAV2-TIMEGLO</b>					
	<b>GLONASS time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise GLO time of the most recent navigation solution including validity flags and an accuracy estimate.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	
	0xb5 0x62	0x29	0x23	20	see below	
					Checksum	
					CK_A CK_B	
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U4	TOD	-	s	GLONASS time of day (rounded to integer seconds)	
8	I4	fTOD	-	ns	Fractional part of TOD (range: +/-500000000). The precise GLONASS time of day in seconds is: $TOD + fTOD * 1e-9$	
12	U2	Nt	-	days	Current date (range: 1-1461), starting at 1 from the 1st Jan of the year indicated by N4 and ending at 1461 at the 31st Dec of the third year after that indicated by N4	
14	U1	N4	-	-	Four-year interval number starting from 1996 (1=1996, 2=2000, 3=2004...)	
15	X1	valid	-	-	Validity flags	
	bit 0	U:1	todValid	-	-	1 = Valid TOD and fTOD (see section Time validity in the integration manual for details)
	bit 1	U:1	dateValid	-	-	1 = Valid N4 and Nt (see section Time validity in the integration manual for details)
16	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.16.19 UBX-NAV2-TIMEGPS (0x29 0x20)

#### 3.16.19.1 GPS time solution

<b>Message</b>	<b>UBX-NAV2-TIMEGPS</b>				
	<b>GPS time solution</b>				
<b>Type</b>	Periodic/pollled				
<b>Comment</b>	This message reports the precise GPS time of the most recent navigation solution including validity flags and an accuracy estimate.				
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>
	0xb5 0x62	0x29	0x20	16	see below
					Checksum
					CK_A CK_B
<i>Payload description:</i>					
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	I4	fTOW	-	ns	Fractional part of iTOW (range: +/-500000). The precise GPS time of week in seconds is: $(iTOW * 1e-3) + (fTOW * 1e-9)$	
8	I2	week	-	-	GPS week number of the navigation epoch	
10	I1	leapS	-	s	GPS leap seconds (GPS-UTC)	
11	X1	valid	-	-	Validity Flags	
	bit 0	U <sub>:1</sub>	towValid	-	-	1 = Valid GPS time of week (iTOW & fTOW, (see section Time validity in the integration manual for details)
	bit 1	U <sub>:1</sub>	weekValid	-	-	1 = Valid GPS week number (see section Time validity in the integration manual for details)
	bit 2	U <sub>:1</sub>	leapSValid	-	-	1 = Valid GPS leap seconds
12	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.16.20 UBX-NAV2-TIMELS (0x29 0x26)

#### 3.16.20.1 Leap second event information

<b>Message</b>	<b>UBX-NAV2-TIMELS</b>					
	<b>Leap second event information</b>					
Type	Periodic/pollled					
Comment	Information about the upcoming leap second event if one is scheduled.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x26	24	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1[3]	reserved0	-	-	Reserved	
8	U1	srcOfCurrLs	-	-	Information source for the current number of leap seconds. <ul style="list-style-type: none"> <li>0 = Default (hardcoded in the firmware, can be outdated)</li> <li>1 = Derived from time difference between GPS and GLONASS time</li> <li>2 = GPS</li> <li>3 = SBAS</li> <li>4 = BeiDou</li> <li>5 = Galileo</li> <li>6 = Aided data</li> <li>7 = Configured</li> <li>8 = NavIC</li> <li>255 = Unknown</li> </ul>	

9	I1	currLs	-	s	Current number of leap seconds since start of GPS time (Jan 6, 1980). It reflects how much GPS time is ahead of UTC time. Galileo number of leap seconds is the same as GPS. BeiDou number of leap seconds is 14 less than GPS. GLONASS follows UTC time, so no leap seconds.	
10	U1	srcOfLsChange	-	-	Information source for the future leap second event. <ul style="list-style-type: none"> <li>0 = No source</li> <li>2 = GPS</li> <li>3 = SBAS</li> <li>4 = BeiDou</li> <li>5 = Galileo</li> <li>6 = GLONASS</li> <li>7 = NavIC</li> </ul>	
11	I1	lsChange	-	s	Future leap second change if one is scheduled. +1 = positive leap second, -1 = negative leap second, 0 = no future leap second event scheduled or no information available. If the value is 0, then the amount of leap seconds did not change and the event should be ignored.	
12	I4	timeToLsEvent	-	s	Number of seconds until the next leap second event, or from the last leap second event if no future event scheduled. If > 0 event is in the future, = 0 event is now, < 0 event is in the past. Valid only if validTimeToLsEvent = 1.	
16	U2	dateOfLsGps Wn	-	-	GPS week number (WN) of the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1.	
18	U2	dateOfLsGps Dn	-	-	GPS day of week number (DN) for the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1. (GPS and Galileo DN: from 1 = Sun to 7 = Sat. BeiDou DN: from 0 = Sun to 6 = Sat.)	
20	U1[3]	reserved1	-	-	<a href="#">Reserved</a>	
23	X1	valid	-	-	Validity flags	
	bit 0	U:1	validCurrLs	-	-	1 = Valid current number of leap seconds value.
	bit 1	U:1	validTimeToLs Event	-	-	1 = Valid time to next leap second event or from the last leap second event if no future event scheduled.

### 3.16.21 UBX-NAV2-TIMEQZSS (0x29 0x27)

#### 3.16.21.1 QZSS time solution

<b>Message</b>	<b>UBX-NAV2-TIMEQZSS</b> <b>QZSS time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise QZSS time of the most recent navigation solution including validity flags and an accuracy estimate. See the Clocks and time section in the integration manual for details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x27	20	see below	CK_A CK_B
<b>Payload description:</b>						
<b>Byte offset</b>	<b>Type</b>	<b>Name</b>	<b>Scale</b>	<b>Unit</b>	<b>Description</b>	

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch.	
4	U4	qzssTow	-	s	QZSS time of week (rounded to seconds)	
8	I4	fQzssTow	-	ns	Fractional part of QZSS time of week (range: +/-500000000). The precise QZSS time of week in seconds is: $qzssTow + (fQzssTow * 1e-9)$	
12	I2	qzssWno	-	-	QZSS week number of the navigation epoch	
14	I1	leapS	-	s	QZSS leap seconds (QZSS-UTC)	
15	X1	valid	-	-	Validity Flags	
	bit 0	U:1	qzssTowValid	-	-	1 = Valid QZSS time of week (qzssTow and fQzssTow)

<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.	
4	I4	velN	-	cm/s	North velocity component	

8	I4	velE	-	cm/s	East velocity component
12	I4	velD	-	cm/s	Down velocity component
16	U4	speed	-	cm/s	Speed (3-D)
20	U4	gSpeed	-	cm/s	Ground speed (2-D)
24	I4	heading	1e-5	deg	Heading of motion 2-D
28	U4	sAcc	-	cm/s	Speed accuracy Estimate
32	U4	cAcc	1e-5	deg	Course / Heading accuracy estimate

## 3.17 UBX-RXM (0x02)

The messages in the UBX-RXM class are used to output status and result data from the receiver manager as well as sending commands to the receiver manager.

### 3.17.1 UBX-RXM-MEASX (0x02 0x14)

#### 3.17.1.1 Satellite measurements for RRLP

Message	UBX-RXM-MEASX					
	Satellite measurements for RRLP					
Type	Periodic/pollled					
<i>Comment</i>	<p>The message payload data is, where possible and appropriate, according to the Radio Resource LCS (Location Services) Protocol (RRLP) [1]. One exception is the satellite and GNSS IDs, which here are given according to the <a href="#">Satellite Numbering</a> scheme. The correct satellites have to be selected and their satellite ID translated accordingly [1, tab. A.10.14] for use in a RRLP Measure Position Response Component. Similarly, the measurement reference time of week has to be forwarded correctly (modulo 14400000 for the 24 LSB GPS measurements variant, modulo 3600000 for the 22 LSB Galileo and Additional Navigation Satellite Systems (GANSS) measurements variant) of the RRLP measure position response to the SMLC.</p> <p>Reference: [1] ETSI TS 144 031 V11.0.0 (2012-10), Digital cellular telecommunications system (Phase 2+), Location Services (LCS), Mobile Station (MS) - Serving Mobile Location Centre (SMLC), Radio Resource LCS Protocol (RRLP), (3GPP TS 44.031 version 11.0.0 Release 11).</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum

<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version, currently 0x01	
1	U1[3]	reserved0	-	-	<a href="#">Reserved</a>	
4	U4	gpsTOW	-	ms	GPS measurement reference time	
8	U4	gloTOW	-	ms	GLONASS measurement reference time	
12	U4	bdsTOW	-	ms	BeiDou measurement reference time	
16	U1[4]	reserved1	-	-	<a href="#">Reserved</a>	
20	U4	qzssTOW	-	ms	QZSS measurement reference time	
24	U2	gpsTOWacc	2 <sup>-4</sup>	ms	GPS measurement reference time accuracy (0xffff = > 4s)	
26	U2	gloTOWacc	2 <sup>-4</sup>	ms	GLONASS measurement reference time accuracy (0xffff = > 4s)	
28	U2	bdsTOWacc	2 <sup>-4</sup>	ms	BeiDou measurement reference time accuracy (0xffff = > 4s)	
30	U1[2]	reserved2	-	-	<a href="#">Reserved</a>	

32	U2	qzssTOWacc	2 <sup>-4</sup>	ms	QZSS measurement reference time accuracy (0xffff = > 4s)
34	U1	numSV	-	-	Number of satellites in repeated block
35	U1	flags	-	-	Flags
	bits 1...0 U <sub>2</sub>	towSet	-	-	TOW set (0 = no, 1 or 2 = yes)
36	U1[8]	reserved3	-	-	Reserved
<i>Start of repeated group (numSV times)</i>					
44 + n·24	U1	gnssId	-	-	GNSS ID (see <a href="#">Satellite Numbering</a> )
45 + n·24	U1	svId	-	-	Satellite ID (see <a href="#">Satellite Numbering</a> )
46 + n·24	U1	cNo	-	-	carrier noise ratio (0..63)
47 + n·24	U1	mpathIndic	-	-	multipath index (according to [1]) (0 = not measured, 1 = low, 2 = medium, 3 = high)
48 + n·24	I4	dopplerMS	0.04	m/s	Doppler measurement
52 + n·24	I4	dopplerHz	0.2	Hz	Doppler measurement
56 + n·24	U2	wholeChips	-	-	whole value of the code phase measurement (0..1022 for GPS)
58 + n·24	U2	fracChips	-	-	fractional value of the code phase measurement (0..1023)
60 + n·24	U4	codePhase	2 <sup>-21</sup>	ms	Code phase
64 + n·24	U1	intCodePhase	-	ms	Integer (part of the) code phase
65 + n·24	U1	pseuRangeRMS Err	-	-	pseudorange RMS error index (according to [1]) (0..63)
66 + n·24	U1[2]	reserved4	-	-	Reserved
<i>End of repeated group (numSV times)</i>					

### 3.17.2 UBX-RXM-PMREQ (0x02 0x41)

#### 3.17.2.1 Power management request

<b>Message</b>	<b>UBX-RXM-PMREQ</b>					
	<b>Power management request</b>					
Type	Command					
Comment	This message requests a power management related task of the receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x41	8	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	duration	-	ms	Duration of the requested task. The maximum supported value is 12 days. Set to 0 to wait for a wakeup signal on a pin	
4	X4	flags	-	-	task flags	
	bit 1 U <sub>1</sub>	backup	-	-	The receiver goes into backup mode for a time period defined by duration, provided that it is not connected to USB	

### 3.17.2.2 Power management request

<b>Message</b>		<b>UBX-RXM-PMREQ</b>				
		<b>Power management request</b>				
Type	Command					
Comment	This message requests a power management related task of the receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x41	16	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1[3]	reserved0	-	-	Reserved	
4	U4	duration	-	ms	Duration of the requested task. The maximum supported value is 12 days. Set to 0 to wait for a wakeup signal on a pin	
8	X4	flags	-	-	task flags	
bit 1	U:1	backup	-	-	The receiver goes into backup mode for a time period defined by duration, provided that it is not connected to USB	
bit 2	U:1	force	-	-	Force receiver backup while USB is connected. USB interface will be disabled.	
12	X4	wakeupSources	-	-	Configure pins to wake up the receiver. The receiver wakes up if there is either a falling or a rising edge on one of the configured pins.	
bit 3	U:1	uartrx	-	-	Wake up the receiver if there is an edge on the UART RX pin	
bit 5	U:1	extint0	-	-	Wake up the receiver if there is an edge on the EXTINT0 pin	
bit 6	U:1	extint1	-	-	Wake up the receiver if there is an edge on the EXTINT1 pin	
bit 7	U:1	spics	-	-	Wake up the receiver if there is an edge on the SPI CS pin	

### 3.17.3 UBX-RXM-RAWX (0x02 0x15)

#### 3.17.3.1 Multi-GNSS raw measurements

<b>Message</b>		<b>UBX-RXM-RAWX</b>				
		<b>Multi-GNSS raw measurements</b>				
Type	Periodic/pollled					
Comment	<p>This message contains the information needed to be able to generate a RINEX 3 multi-GNSS observation file (see <a href="ftp://ftp.igs.org/pub/data/format/">ftp://ftp.igs.org/pub/data/format/</a>).</p> <p>This message contains pseudorange, Doppler, carrier phase, phase lock and signal quality information for GNSS satellites once signals have been synchronized. This message supports all active GNSS.</p> <p>The only difference between this version of the message and the previous version (<b>UBX-RXM-RAWX-DATA0</b>) is the addition of the version field.</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x15	16 + numMeas*32	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	

0	R8	rcvTow	-	s	Measurement time of week in receiver local time approximately aligned to the GPS time system. The receiver local time of week, week number and leap second information can be used to translate the time to other time systems. More information about the difference in time systems can be found in the RINEX 3 format documentation. For a receiver operating in GLONASS only mode, UTC time can be determined by subtracting the leapS field from GPS time regardless of whether the GPS leap seconds are valid.	
8	U2	week	-	weeks	GPS week number in receiver local time.	
10	I1	leapS	-	s	GPS leap seconds (GPS-UTC). This field represents the receiver's best knowledge of the leap seconds offset. A flag is given in the recStat bitfield to indicate if the leap seconds are known.	
11	U1	numMeas	-	-	Number of measurements to follow	
12	X1	recStat	-	-	Receiver tracking status bitfield	
	bit 0	U:1	leapSec	-	-	Leap seconds have been determined
	bit 1	U:1	clkReset	-	-	Clock reset applied. Typically the receiver clock is changed in increments of integer milliseconds.
13	U1	version	-	-	Message version (0x01 for this version)	
14	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
<i>Start of repeated group (numMeas times)</i>						
16 + n·32	R8	prMes	-	m	Pseudorange measurement [m]. GLONASS inter frequency channel delays are compensated with an internal calibration table.	
24 + n·32	R8	cpMes	-	cycles	Carrier phase measurement [cycles]. The carrier phase initial ambiguity is initialized using an approximate value to make the magnitude of the phase close to the pseudorange measurement. Clock resets are applied to both phase and code measurements in accordance with the RINEX specification.	
32 + n·32	R4	doMes	-	Hz	Doppler measurement (positive sign for approaching satellites) [Hz]	
36 + n·32	U1	gnssId	-	-	GNSS identifier (see <a href="#">Satellite Numbering</a> for a list of identifiers)	
37 + n·32	U1	svId	-	-	Satellite identifier (see <a href="#">Satellite Numbering</a> )	
38 + n·32	U1	sigId	-	-	New style signal identifier (see <a href="#">Signal Identifiers</a> ). (not supported for protocol versions less than 27.00)	
39 + n·32	U1	freqId	-	-	Only used for GLONASS: This is the frequency slot + 7 (range from 0 to 13)	
40 + n·32	U2	locktime	-	ms	Carrier phase locktime counter (maximum 64500ms)	
42 + n·32	U1	cno	-	dBHz	Carrier-to-noise density ratio (signal strength) [dB-Hz]	
43 + n·32	X1	prStdev	0.01*2 <sup>n</sup>	m	Estimated pseudorange measurement standard deviation	
	bits 3...0	U:4	prStd	-	-	Estimated pseudorange standard deviation
44 + n·32	X1	cpStdev	0.004	cycles	Estimated carrier phase measurement standard deviation (note a raw value of 0x0F indicates the value is invalid)	
	bits 3...0	U:4	cpStd	-	-	Estimated carrier phase standard deviation

45 + n·32	X1	doStdDev	0.002*2 <sup>n</sup> Hz		Estimated Doppler measurement standard deviation.
bits 3...0	U <sub>4</sub>	doStd	-	-	Estimated Doppler standard deviation
46 + n·32	X1	trkStat	-	-	Tracking status bitfield
bit 0	U <sub>1</sub>	prValid	-	-	Pseudorange valid
bit 1	U <sub>1</sub>	cpValid	-	-	Carrier phase valid
bit 2	U <sub>1</sub>	halfCyc	-	-	Half cycle valid
bit 3	U <sub>1</sub>	subHalfCyc	-	-	Half cycle subtracted from phase
47 + n·32	U1	reserved1	-	-	<a href="#">Reserved</a>

*End of repeated group (numMeas times)*

### 3.17.4 UBX-RXM-RLM (0x02 0x59)

#### 3.17.4.1 Galileo SAR short-RLM report

<b>Message</b>	<b>UBX-RXM-RLM</b> <b>Galileo SAR short-RLM report</b>					
Type	Output					
Comment	This message contains the contents of any Galileo Search and Rescue (SAR) Short Return Link Message detected by the receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x59	16	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	type	-	-	Message type (0x01 for Short-RLM)	
2	U1	svId	-	-	Identifier of transmitting satellite (see <a href="#">Satellite Numbering</a> )	
3	U1	reserved0	-	-	<a href="#">Reserved</a>	
4	U1[8]	beacon	-	-	Beacon identifier (60 bits), with bytes ordered by earliest transmitted (most significant) first. Top four bits of first byte are zero.	
12	U1	message	-	-	Message code (4 bits)	
13	U1[2]	params	-	-	Parameters (16 bits), with bytes ordered by earliest transmitted (most significant) first.	
15	U1	reserved1	-	-	<a href="#">Reserved</a>	

#### 3.17.4.2 Galileo SAR long-RLM report

<b>Message</b>	<b>UBX-RXM-RLM</b> <b>Galileo SAR long-RLM report</b>					
Type	Output					
Comment	This message contains the contents of any Galileo Search and Rescue (SAR) Long Return Link Message detected by the receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x59	28	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	

1	U1	type	-	-	Message type (0x02 for Long-RLM)
2	U1	svId	-	-	Identifier of transmitting satellite (see <a href="#">Satellite Numbering</a> )
3	U1	reserved0	-	-	Reserved
4	U1[8]	beacon	-	-	Beacon identifier (60 bits), with bytes ordered by earliest transmitted (most significant) first. Top four bits of first byte are zero.
12	U1	message	-	-	Message code (4 bits)
13	U1[12]	params	-	-	Parameters (96 bits), with bytes ordered by earliest transmitted (most significant) first.
25	U1[3]	reserved1	-	-	Reserved

## 3.18 UBX-SEC (0x27)

The messages in the UBX-SEC class are used for security features of the receiver.

### 3.18.1 UBX-SEC-SIG (0x27 0x09)

#### 3.18.1.1 Signal security information

<b>Message</b>		<b>UBX-SEC-SIG</b>				
		<b>Signal security information</b>				
Type	Periodic/pollled					
Comment	Information related to the security, i.e. availability and integrity, of the signals.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x27	0x09	4 + jamNumCentFreqs*4	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x02 for this version)	
1	X1	sigSecFlags	-	-	Signal security flags, providing high-level jamming and spoofing detector information	
bit 0	U <sub>1</sub>	jamDetEnabled	-	-	Flag indicates whether jamming detection is enabled	
bits 2...1	U <sub>2</sub>	jamState	-	-	Jamming state <ul style="list-style-type: none"> <li>0: Unknown</li> <li>1: No jamming indicated</li> <li>2: Warning; jamming indicated</li> </ul> <i>0: Unknown</i> , denotes that the currently available information is not sufficient to judge whether the receiver is jammed or not. This may occur at receiver start up (or more generally when the receiver is in a mode, where jamming detection is hindered) or when the jamming indicator is disabled. <i>1: No jamming indicated</i> : the jamming indicator is enabled and does not sense any significant jamming. <i>2: Warning; jamming indicated</i> : the jamming indicator is indicating jamming which has a significant impact on the signal tracking. (The list <i>jamPerCentFreq</i> can be checked to find out which frequency bands are jammed.)	
bit 3	U <sub>1</sub>	spfDetEnabled	-	-	Flag indicates whether spoofing detection is enabled	
bits 6...4	U <sub>3</sub>	spfState	-	-	Spoofing state <ul style="list-style-type: none"> <li>0: Unknown</li> </ul>	

- 1: No spoofing indicated
- 2: Spoofing indicated
- 3: Spoofing affirmed

2	U1	reserved0	-	-	Reserved
3	U1	jamNumCentFreqs	-	-	The number of center frequencies we provide jamming information for (subsequent messages)
<i>Start of repeated group (jamNumCentFreqs times)</i>					
4 + n·4	X4	jamStateCentFreq	-	-	Jamming state of signals sharing a given center frequency  Note that jamming information is only provided for center frequencies related to at least one in-use signal, for which a sufficient amount of information is currently available to judge if it is affected by jamming.
bits 23...0	U:24	centFreq	-	-	Center frequency in [kHz], floored to the nearest kHz multiple
bit 24	U:1	jammed	-	-	Flag indicates whether signals on the given center frequency are considered jammed
<i>End of repeated group (jamNumCentFreqs times)</i>					

### 3.18.2 UBX-SEC-SIGLOG (0x27 0x10)

#### 3.18.2.1 Signal security log

<b>Message</b>	<b>UBX-SEC-SIGLOG</b>					
	<b>Signal security log</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message provides a log of past signal security related events, that is, events related to jamming and spoofing. Each event is a combination of a detection type and a event type, where the event type 'indication started' and 'indication stopped' and also the event type 'indication triggered' and 'indication timed-out' form a pair. A maximum of 16 events are logged; after the log is filled, recent events take precedence over past events in the log. Power cycles and restarts of the receiver reset the log, deleting its content.  Note: It is advised not to restart the receiver while it's indicating spoofing.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x27	0x10	8 + numEvents·8	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x01 for this version)	
1	U1	numEvents	-	-	Number of events	
2	U1[6]	reserved0	-	-	Reserved	
<i>Start of repeated group (numEvents times)</i>						
8 + n·8	U4	timeElapsed	-	s	Seconds elapsed since this event Special value 0xFFFFFFFF: more than 45 days	
12 + n·8	U1	detectionType	-	-	Type of the spoofing or jamming detection: <ul style="list-style-type: none"> <li>• 0 = simulated signal</li> <li>• 1 = abnormal signal</li> <li>• 2 = INS/GNSS mismatch</li> <li>• 3 = abrupt changes in GNSS signal</li> <li>• 4 = jamming indicated</li> <li>• 5 = authentication failed</li> <li>• 6 = replayed signals</li> </ul>	

13 + n·8	U1	eventType	-	-	Type of the event: <ul style="list-style-type: none"> <li>• 0 = indication started</li> <li>• 1 = indication stopped</li> <li>• 2 = indication triggered</li> <li>• 3 = indication timed-out</li> </ul> <p>Note: Single epoch events, caused by abrupt changes due to switching from the real to the spoofing signal or vice versa, are handled as time-out events. This means that the time-out event is reported after a certain cool off period which is not related to any observations in the signal. The other detection types will make use of 'start' and 'stop'. event types.</p>
14 + n·8	U1[2]	reserved1	-	-	Reserved

End of repeated group (*numEvents* times)

### 3.18.3 UBX-SEC-UNIQID (0x27 0x03)

#### 3.18.3.1 Unique chip ID

<b>Message</b>	<b>UBX-SEC-UNIQID</b>					
	<b>Unique chip ID</b>					
Type	Output					
Comment	This message is used to retrieve a unique chip identifier (40 bits, 5 bytes).					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x27	0x03	9	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x01 for this version)	
1	U1[3]	reserved0	-	-	Reserved	
4	U1[5]	uniqueId	-	-	Unique chip ID	

### 3.19 UBX-TIM (0x0d)

The messages in the UBX-TIM class are used to output timing information from the receiver, such as time pulse and time mark measurements.

#### 3.19.1 UBX-TIM-TM2 (0x0d 0x03)

##### 3.19.1.1 Time mark data

<b>Message</b>	<b>UBX-TIM-TM2</b>					
	<b>Time mark data</b>					
Type	Periodic/pollled					
Comment	This message contains information for high precision time stamping / pulse counting. The delay figures and timebase given in <a href="#">CFG-TP Configuration Items</a> are also applied to the time results output in this message.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0d	0x03	28	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	

0	U1	ch	-	-	Channel (i.e. EXTINT) upon which the pulse was measured
1	X1	flags	-	-	Bitmask

bit 1	U:1	run	-	-	<ul style="list-style-type: none"> <li>0=armed</li> <li>1=stopped</li> </ul>
bit 2	U:1	newFallingEdge	-	-	New falling edge detected
bits 4...3	U:2	timeBase	-	-	<ul style="list-style-type: none"> <li>0=Time base is Receiver time</li> <li>1=Time base is GNSS time (the system according to the configuration in <a href="#">CFG-TP Configuration Items</a> for tpldx=0)</li> <li>2=Time base is UTC (the variant according to the configuration in <a href="#">CFG-NAVSPG-* configuration items</a>)</li> </ul>
bit 5	U:1	utc	-	-	<ul style="list-style-type: none"> <li>0=UTC not available</li> <li>1=UTC available</li> </ul>
bit 6	U:1	time	-	-	<ul style="list-style-type: none"> <li>0=Time is not valid</li> <li>1=Time is valid (Valid GNSS fix)</li> </ul>
bit 7	U:1	newRisingEdge	-	-	New rising edge detected
2	U2	count	-	-	Rising edge counter
4	U2	wnR	-	-	Week number of last rising edge
6	U2	wnF	-	-	Week number of last falling edge
8	U4	towMsR	-	ms	Tow of rising edge
12	U4	towSubMsR	-	ns	Millisecond fraction of tow of rising edge in nanoseconds
16	U4	towMsF	-	ms	Tow of falling edge
20	U4	towSubMsF	-	ns	Millisecond fraction of tow of falling edge in nanoseconds
24	U4	accEst	-	ns	Accuracy estimate

### 3.19.2 UBX-TIM-TP (0x0d 0x01)

#### 3.19.2.1 Time pulse time data

<b>Message</b>	<b>UBX-TIM-TP</b>					
	<b>Time pulse time data</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message contains information on the timing of the next pulse at the TIMEPULSE0 output. The recommended configuration when using this message is to set both the measurement rate ( <a href="#">CFG-RATE</a> ) and the timepulse frequency ( <a href="#">CFG-TP</a> ) to 1 Hz.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0d	0x01	16	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	towMS	-	ms	Time pulse time of week according to time base	
4	U4	towSubMS	2 <sup>-32</sup>	ms	Submillisecond part of towMS	
8	I4	qErr	-	ps	Quantization error of time pulse	
12	U2	week	-	weeks	Time pulse week number according to time base	

14	X1	flags	-	-	Flags
bit 0	U:1	timeBase	-	-	<ul style="list-style-type: none"> <li>0 = Time base is GNSS</li> <li>1 = Time base is UTC</li> </ul>
bit 1	U:1	utc	-	-	<ul style="list-style-type: none"> <li>0 = UTC not available</li> <li>1 = UTC available</li> </ul>
bits 3...2	U:2	raim	-	-	(T)RAIM information <ul style="list-style-type: none"> <li>0 = Information not available</li> <li>1 = Not active</li> <li>2 = Active</li> </ul>
bit 4	U:1	qErrInvalid	-	-	<ul style="list-style-type: none"> <li>0 = Quantization error valid</li> <li>1 = Quantization error invalid</li> </ul>
bit 5	U:1	TpNotLocked	-	-	<ul style="list-style-type: none"> <li>0 = Next TP is locked to GNSS</li> <li>1 = Next TP is based on local time and not locked to GNSS - week/tow may be invalid</li> </ul>
15	X1	refInfo	-	-	Time reference information
bits 3...0	U:4	timeRefGnss	-	-	GNSS reference information. Only valid if time base is GNSS (timeBase=0). <ul style="list-style-type: none"> <li>0 = GPS</li> <li>1 = GLONASS</li> <li>2 = BeiDou</li> <li>3 = Galileo</li> <li>4 = NavIC</li> <li>15 = Unknown</li> </ul>
bits 7...4	U:4	utcStandard	-	-	UTC standard identifier. Only valid if time base is UTC (timeBase=1). <ul style="list-style-type: none"> <li>0 = Information not available</li> <li>1 = Communications Research Laboratory (CRL), Tokyo, Japan</li> <li>2 = National Institute of Standards and Technology (NIST)</li> <li>3 = U.S. Naval Observatory (USNO)</li> <li>4 = International Bureau of Weights and Measures (BIPM)</li> <li>5 = European laboratories</li> <li>6 = Former Soviet Union (SU)</li> <li>7 = National Time Service Center (NTSC), China</li> <li>8 = National Physics Laboratory India (NPLI)</li> <li>15 = Unknown</li> </ul>

### 3.19.3 UBX-TIM-VERFY (0x0d 0x06)

#### 3.19.3.1 Sourced time verification

<b>Message</b>	<b>UBX-TIM-VERFY</b>					
	<b>Sourced time verification</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message contains verification information about previous time received via assistance data or from RTC.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0d	0x06	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	I4	itow	-	ms	integer millisecond tow received by source	
4	I4	frac	-	ns	sub-millisecond part of tow	

8	I4	deltaMs	-	ms	integer milliseconds of delta time (current time minus sourced time)	
12	I4	deltaNs	-	ns	Sub-millisecond part of delta time	
16	U2	wno	-	week	Week number	
18	X1	flags	-	-	Flags	
	bits 2...0	U:3	src	-	-	Aiding time source <ul style="list-style-type: none"> <li>• 0 = no time aiding done</li> <li>• 2 = source was RTC</li> <li>• 3 = source was assistance data</li> </ul>
19	U1	reserved0	-	-	Reserved	

## 3.20 UBX-UPD (0x09)

The messages in the UBX-UPD class are used to download a firmware to the receiver and to update the firmware on the flash.

### 3.20.1 UBX-UPD-SOS (0x09 0x14)

#### 3.20.1.1 Poll backup restore status

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>Poll backup restore status</b>					
<i>Type</i>	Poll request					
<i>Comment</i>	Sending this (empty) message to the receiver results in the receiver returning a <i>System restored from backup</i> message as defined below.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x09	0x14	0	see below	CK_A CK_B
<i>Payload</i>	This message has no payload.					

#### 3.20.1.2 Create backup in flash

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>Create backup in flash</b>					
<i>Type</i>	Command					
<i>Comment</i>	The host can send this message in order to save part of the battery-backed memory (BBR) in a file in the flash file system. The feature is designed in order to emulate the presence of the backup battery even if it is not present; the host can issue the save on shutdown command before switching off the device supply. It is recommended to issue a GNSS stop command using UBX-CFG-RST before in order to keep the BBR memory content consistent.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x09	0x14	4	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	cmd	-	-	Command (must be 0)	
1	U1[3]	reserved0	-	-	Reserved	

#### 3.20.1.3 Clear backup in flash

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>Clear backup in flash</b>					
<i>Type</i>	Command					

**Comment** The host can send this message in order to erase the backup file present in flash. It is recommended that the clear operation is issued after the host has received the notification that the memory has been restored after a reset. Alternatively the host can parse the startup string *Restored data saved on shutdown* or poll the UBX-UPD-SOS message for obtaining the status.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x09	0x14	4	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1	cmd	-	-	Command (must be 1)
1	U1[3]	reserved0	-	-	Reserved

### 3.20.1.4 Backup creation acknowledge

**Message** **UBX-UPD-SOS**  
**Backup creation acknowledge**

**Type** Output

**Comment** The message is sent from the device as confirmation of creation of a backup file in flash. The host can safely shut down the device after having received this message.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x09	0x14	8	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1	cmd	-	-	Command (must be 2)
1	U1[3]	reserved0	-	-	Reserved
4	U1	response	-	-	<ul style="list-style-type: none"> <li>0 = Not acknowledged</li> <li>1 = Acknowledged</li> </ul>
5	U1[3]	reserved1	-	-	Reserved

### 3.20.1.5 System restored from backup

**Message** **UBX-UPD-SOS**  
**System restored from backup**

**Type** Output

**Comment** The message is sent from the device to notify the host the BBR has been restored from a backup file in the flash file system. The host should clear the backup file after receiving this message. If the UBX-UPD-SOS message is polled, this message will be resent.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x09	0x14	8	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1	cmd	-	-	Command (must be 3)
1	U1[3]	reserved0	-	-	Reserved
4	U1	response	-	-	<ul style="list-style-type: none"> <li>0 = Unknown</li> <li>1 = Failed restoring from backup</li> <li>2 = Restored from backup</li> <li>3 = Not restored (no backup)</li> </ul>
5	U1[3]	reserved1	-	-	Reserved

## 4 Configuration interface

This chapter describes the receiver configuration interface.

### 4.1 Configuration database

The configuration database in the receiver's RAM holds the current configuration, which is used by the receiver at run-time. It is constructed on startup of the receiver from several sources of configuration. These sources are called *Configuration Layers*. The current configuration is called the *RAM Layer*. Any configuration in any layer is organized as *Configuration Items*, where each Configuration Item is referenced to by a unique *Configuration Key ID* and holds a single *Configuration Value*.

### 4.2 Configuration items

The following figure shows the structure of a *Configuration Item*, which consists of a (*Configuration*) *Key ID* and its (*Configuration*) *Value*:

A Configuration Key ID is a 32-bit integer value, which is split into the following parts:

- Bit 31: Currently unused. Reserved for future use.
- Bits 30...28: Three bits that indicate the storage size of a Configuration Value (range 0x01-0x05, see below)
- Bits 27...24: Currently unused. Reserved for future use.
- Bits 23...16: Eight bits that define a unique group ID (range 0x01-0xfe)
- Bits 15...12: Currently unused. Reserved for future use.
- Bits 11...0: Twelve bits that define a unique item ID within a group (range 0x001-0xffe)

The entire 32-bit value is the unique Key ID, which uniquely identifies a particular item. The numeric representation of the Key ID uses the lower-case hexadecimal format, such as 0x20c400a1. An easier, more readable text representation uses the form *CFG-GROUP-ITEM*. This is also referred to as the (*Configuration*) *Key Name*.

Supported storage size identifiers (bits 30...28 of the Key ID) are:

- 0x01: one bit (the actual storage used is one byte, but only the least significant bit is used)
- 0x02: one byte
- 0x03: two bytes
- 0x04: four bytes

- 0x05: eight bytes

Each Configuration Item is of a certain type, which defines the interpretation of the raw binary data (see also [UBX data types](#)):

- U1, U2, U4, U8: unsigned little-endian integers of 8-, 16-, 32- and 64-bit widths
- I1, I2, I4, I8: signed little-endian, two's complement integers of 8-, 16-, 32- and 64-bit widths
- R4, R8: IEEE 754 single (32-bit) and double (64-bit) precision floats
- E1, E2, E4: unsigned little-endian enumeration of 8-, 16-, and 32-bit widths
- X1, X2, X4, X8: unsigned little-endian integers of 8-, 16-, 32- and 64-bit widths for bitfields and other binary data, such as strings
- L: single-bit boolean (true = 1, false = 0), stored as U1

### 4.3 Configuration layers

Several *Configuration Layers* exist. They are separate sources of Configuration Items. Some of the layers are read-only and others are modifiable. Layers are organized in terms of priority. Values in a high-priority layer will replace values stored in low-priority layer. On startup of the receiver all configuration layers are read and the items within each layer are stacked up in order to create the *Current Configuration*, which is used by the receiver at run-time.

The following configuration layers are available (in order of priority, highest priority first):

- **RAM:** This layer contains items stored in volatile RAM. This is the Current Configuration. The value of any item can be set by the user at run-time (see [UBX protocol interface](#)) and it will become effective immediately.
- **BBR:** This layer contains items stored in the battery-backed RAM. The contents in this layer are preserved as long as a battery backup supply is provided during off periods. The value of any item can be set by the user at run-time (see [UBX protocol interface](#)) and it will become effective upon a restart of the receiver.
- **Flash:** This layer contains items stored permanently in the external flash memory. This layer is only available if there is a usable external flash memory. The value of any item can be set by the user at run-time (see [UBX protocol interface](#)) and it will become effective upon a restart of the receiver.
- **Default:** This layer contains all items known to the running receiver software and their hard-coded default values. Data in this layer is not writable.

The stacking of the configuration items from the different layers (sources) in order to construct the Current Configuration in the RAM Layer is depicted in the following figure. For each defined item, i.e. for each item in the Default Layer, the receiver software goes through the layers above and stacks all the found items on top. Some items may not be present in every layer. The result is the RAM Layer filled with all configuration items given Configuration Values coming from the highest priority layer the corresponding item was present. In the example figure below bold text indicates the source of the value in the Current Configuration (the RAM Layer). Empty boxes mean that the layer can hold the item but that it is not currently stored there. Boxes with text mean that an item is currently stored in the layer.

In the example figure above several items (e.g. the first item) are only set in the Default Layer and hence the default value ends up in Current Configuration in the RAM Layer. The third item is present in the Default, Flash and BBR Layers. The value from the BBR Layer has the highest priority and therefore it ends up in the RAM Layer. On the other hand, the default value of the sixth item is changed by the value in the Flash Layer. The value of the last item is changed in the RAM Layer only, i.e. upon startup the value in the RAM Layer was the value from the Default Layer, but the user has changed the value in the RAM Layer at run-time.

## 4.4 Configuration interface access

The following sections describe the existing interfaces to access the Configuration Database.

### 4.4.1 UBX protocol interface

The following [UBX protocol](#) messages are available to access the Configuration Database:

- [UBX-CFG-VALGET](#) to read configuration items from the database
- [UBX-CFG-VALSET](#) to set configuration items in the database
- [UBX-CFG-VALDEL](#) to delete configuration items from the database

## 4.5 Configuration data

Configuration data is the binary representation of a list of Key ID and Value pairs. It is formed by concatenating keys (U4 values) and values (variable type) without any padding. This format is used in the [UBX-CFG-VALSET](#) and [UBX-CFG-VALGET](#) messages.

The figure below shows an example. The four Items (Key ID - Value pairs) on the left use the four fundamental storage sizes: one byte (L, U1, I1, E1 and X1 types), 2 bytes (U2, I2, E2 and X2 types), four byte (U4, I4, E4, X4 and R4 types) and eight bytes (U8, I8, X8 and R8 types). When concatenated (right) the Key IDs and Values are not aligned and there is no padding.

Note that this is an arbitrary example and any number of items of any value storage size can be concatenated the same way.

## 4.6 Configuration transactions

The configuration interface supports two mechanisms of configuration: the first is a transactionless mechanism where sent configuration changes are applied immediately to the configuration layer(s) requested. The second mechanism is a configuration transaction.

A transaction offers a way of queuing multiple configuration changes. It is particularly useful where different configuration keys depend on each other in such a way that sending one before the other can cause the configuration to be rejected. The queued configuration change requests are stored then checked collectively before being applied to the receiver.

A transaction can have the following states described in the figure below.

When starting a transaction, the user must specify the layer(s) the changes will be applied to. This list of configuration layer(s) must be observed throughout the transaction states. Modifying the configuration layer(s) mid-transaction will cause the transaction to be aborted and no queued changes will be applied.

In the start transaction state, the receiver will lock the configuration database so that changes from another entity or message cannot be applied. It is possible to send a configuration key-value pairs with the start transaction state. These will be queued waiting to be applied.

In the ongoing state, a configuration key and value must be sent. The receiver will abort the transaction and not apply any changes if this condition is violated. Key-value pairs sent in the ongoing state will be queued waiting to be applied.

In the apply state, the queued changes will be collectively checked and applied to the requested configuration layer(s). Note that any additional key-value pairs sent within the apply state will be ignored.

Note that a transaction can only come from a single source, a [UBX-CFG-VALSET](#) message or a [UBX-CFG-VALDEL](#) message. This means that in any given transaction it is not possible to mix a delete

and a save request. Starting a transaction from a different source will abort the current transaction and no queued changes would be applied.

Refer to [UBX-CFG-VALSET](#) and [UBX-CFG-VALDEL](#) messages for a detailed description of how to set up a configuration transaction, its limitations and conditions that would cause the transaction to be rejected.

## 4.7 Configuration reset behavior

The RAM layer is always rebuilt from the layers below when the chip's processor comes out from reset. When using [UBX-CFG-RST](#) the processor goes through a reset cycle with these reset types (`resetMode` field):

- 0x00 hardware reset (watchdog) immediately
- 0x01 controlled software reset
- 0x04 hardware reset (watchdog) after shutdown

See section Forcing a receiver reset in the integration manual.

## 4.8 Configuration overview

Group	Description
<a href="#">CFG-BDS</a>	BeiDou system configuration
<a href="#">CFG-GEOFENCE</a>	Geofencing configuration
<a href="#">CFG-HW</a>	Hardware configuration
<a href="#">CFG-I2C</a>	Configuration of the I2C interface
<a href="#">CFG-I2CINPROT</a>	Input protocol configuration of the I2C interface
<a href="#">CFG-I2COUTPROT</a>	Output protocol configuration of the I2C interface
<a href="#">CFG-INFMSG</a>	Information message configuration
<a href="#">CFG-MOT</a>	Motion detector configuration
<a href="#">CFG-MSGOUT</a>	Message output configuration
<a href="#">CFG-NAV2</a>	Secondary output configuration
<a href="#">CFG-NAVSPG</a>	Standard precision navigation configuration
<a href="#">CFG-NMEA</a>	NMEA protocol configuration
<a href="#">CFG-ODO</a>	Odometer and low-speed course over ground filter configuration
<a href="#">CFG-QZSS</a>	QZSS system configuration
<a href="#">CFG-RATE</a>	Navigation and measurement rate configuration
<a href="#">CFG-RINV</a>	Remote inventory
<a href="#">CFG-SBAS</a>	SBAS configuration
<a href="#">CFG-SEC</a>	Security configuration
<a href="#">CFG-SFCORE</a>	Sensor fusion (SF) core configuration
<a href="#">CFG-SFIMU</a>	Sensor fusion (SF) inertial measurement unit (IMU) configuration
<a href="#">CFG-SFODO</a>	Sensor fusion (SF) odometer configuration
<a href="#">CFG-SIGNAL</a>	Satellite systems (GNSS) signal configuration
<a href="#">CFG-SPI</a>	Configuration of the SPI interface
<a href="#">CFG-SPIINPROT</a>	Input protocol configuration of the SPI interface
<a href="#">CFG-SPIOUTPROT</a>	Output protocol configuration of the SPI interface

Group	Description
<a href="#">CFG-TP</a>	Time pulse configuration
<a href="#">CFG-TXREADY</a>	TX ready configuration
<a href="#">CFG-UART1</a>	Configuration of the UART1 interface
<a href="#">CFG-UART1INPROT</a>	Input protocol configuration of the UART1 interface

## 4.9 Configuration reference

### 4.9.1 CFG-BDS: BeiDou system configuration

Note that enabling and disabling of individual GNSS is done via the [CFG-SIGNAL](#) configuration group.

Configuration item	Key ID	Type	Scale	Unit	Description
<a href="#">CFG-BDS-USE_GEO_PRN</a>	0x10340014	L	-	-	Use BeiDou geostationary satellites (PRN 1-5 and 59-63)

Table 5: CFG-BDS configuration items

### 4.9.2 CFG-GEOFENCE: Geofencing configuration

Configuration for the geofencing feature. See section Geofencing in the integration manual for feature details.

If the receiver is sent a valid new configuration, it will respond with a [UBX-ACK-ACK](#) message and immediately change to the new configuration. Otherwise the receiver will reject the request, by issuing a [UBX-ACK-NAK](#) and continuing operation with the previous configuration.

Note that the acknowledge message does not indicate whether the PIO configuration has been successfully applied (pin assigned), it only indicates the successful configuration of the feature. The configured PIO must be previously unoccupied for successful assignment.

Configuration item	Key ID	Type	Scale	Unit	Description
<a href="#">CFG-GEOFENCE-CONFLVL</a>	0x20240011	E1	-	-	Required confidence level for state evaluation This value times the position's standard deviation (sigma) defines the confidence band. See <a href="#">Table 7</a> below for a list of possible constants for this item.
<a href="#">CFG-GEOFENCE-USE_PIO</a>	0x10240012	L	-	-	Use PIO combined fence state output
<a href="#">CFG-GEOFENCE-PINPOL</a>	0x20240013	E1	-	-	PIO pin polarity See <a href="#">Table 8</a> below for a list of possible constants for this item.
<a href="#">CFG-GEOFENCE-PIN</a>	0x20240014	U1	-	-	PIO pin number
<a href="#">CFG-GEOFENCE-USE_FENCE1</a>	0x10240020	L	-	-	Use first geofence
<a href="#">CFG-GEOFENCE-FENCE1_LAT</a>	0x40240021	I4	1e-7	deg	Latitude of the first geofence circle center
<a href="#">CFG-GEOFENCE-FENCE1_LON</a>	0x40240022	I4	1e-7	deg	Longitude of the first geofence circle center

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-GEOFENCE-FENCE1_RAD</i>	0x40240023	U4	0.01	m	Radius of the first geofence circle
<i>CFG-GEOFENCE-USE_FENCE2</i>	0x10240030	L	-	-	Use second geofence
<i>CFG-GEOFENCE-FENCE2_LAT</i>	0x40240031	I4	1e-7	deg	Latitude of the second geofence circle center
<i>CFG-GEOFENCE-FENCE2_LON</i>	0x40240032	I4	1e-7	deg	Longitude of the second geofence circle center
<i>CFG-GEOFENCE-FENCE2_RAD</i>	0x40240033	U4	0.01	m	Radius of the second geofence circle
<i>CFG-GEOFENCE-USE_FENCE3</i>	0x10240040	L	-	-	Use third geofence
<i>CFG-GEOFENCE-FENCE3_LAT</i>	0x40240041	I4	1e-7	deg	Latitude of the third geofence circle center
<i>CFG-GEOFENCE-FENCE3_LON</i>	0x40240042	I4	1e-7	deg	Longitude of the third geofence circle center
<i>CFG-GEOFENCE-FENCE3_RAD</i>	0x40240043	U4	0.01	m	Radius of the third geofence circle
<i>CFG-GEOFENCE-USE_FENCE4</i>	0x10240050	L	-	-	Use fourth geofence
<i>CFG-GEOFENCE-FENCE4_LAT</i>	0x40240051	I4	1e-7	deg	Latitude of the fourth geofence circle center
<i>CFG-GEOFENCE-FENCE4_LON</i>	0x40240052	I4	1e-7	deg	Longitude of the fourth geofence circle center
<i>CFG-GEOFENCE-FENCE4_RAD</i>	0x40240053	U4	0.01	m	Radius of the fourth geofence circle

**Table 6: CFG-GEOFENCE configuration items**

Constant	Value	Description
<i>L000</i>	0	No confidence
<i>L680</i>	1	68%
<i>L950</i>	2	95%
<i>L997</i>	3	99.7%
<i>L9999</i>	4	99.99%
<i>L999999</i>	5	99.9999%

**Table 7: Constants for CFG-GEOFENCE-CONFLVL**

Constant	Value	Description
<i>LOW_IN</i>	0	PIO low means inside geofence
<i>LOW_OUT</i>	1	PIO low means outside geofence

**Table 8: Constants for CFG-GEOFENCE-PINPOL**

### 4.9.3 CFG-HW: Hardware configuration

Hardware configuration settings.

Note that not all settings are available for all products. See the applicable data sheet for supported features.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-HW-ANT_CFG_VOLTCTRL</i>	0x10a3002e	L	-	-	Active antenna voltage control flag Enable active antenna voltage control flag. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_SHORTDET</i>	0x10a3002f	L	-	-	Short antenna detection flag Enable short antenna detection flag. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_SHORTDET_POL</i>	0x10a30030	L	-	-	Short antenna detection polarity Set to true if polarity of the antenna short detection is active low. Used by EXT engine.
<i>CFG-HW-ANT_CFG_OPENDET</i>	0x10a30031	L	-	-	Open antenna detection flag Enable open antenna detection flag. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_OPENDET_POL</i>	0x10a30032	L	-	-	Open antenna detection polarity

Configuration item	Key ID	Type	Scale	Unit	Description
					Set to true if polarity of the antenna open detection is active low. Used by EXT engine.
<i>CFG-HW-ANT_CFG_PWRDOWN</i>	0x10a30033	L	-	-	Power down antenna flag Enable power down antenna logic in the event of antenna short circuit. <i>CFG-HW-ANT_CFG_SHORTDET</i> must be enabled to use this feature. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_PWRDOWN_POL</i>	0x10a30034	L	-	-	Power down antenna logic polarity Set to true if polarity of the antenna power down logic is active high. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_RECOVER</i>	0x10a30035	L	-	-	Automatic recovery from short state flag Enable automatic recovery from short state. Used by EXT and MADC engines.
<i>CFG-HW-ANT_SUP_SWITCH_PIN</i>	0x20a30036	U1	-	-	ANT1 PIO number Antenna Switch (ANT1) PIO number. Used by EXT and MADC engines.
<i>CFG-HW-ANT_SUP_SHORT_PIN</i>	0x20a30037	U1	-	-	ANT0 PIO number Antenna Short (ANT0) PIO number. Used by EXT engine.
<i>CFG-HW-ANT_SUP_OPEN_PIN</i>	0x20a30038	U1	-	-	ANT2 PIO number Antenna Switch (ANT2) PIO number. Used by EXT engine.
<i>CFG-HW-SENS_WOM_MODE</i>	0x20a30063	E1	-	-	Select Wake-On-Motion mode See <a href="#">Table 10</a> below for a list of possible constants for this item.
<i>CFG-HW-SENS_WOM_THLD</i>	0x20a30064	U1	-	-	Wake-On-Motion threshold Required acceleration on single accelerometer axis for triggering wake up, from 0 to 1 g, where $g = 9.81 \text{ m/s}^2$ . Value range is [1-255], with 1 step = $1/255 * g$ . For example, for 0.5 g threshold the configured value should be 128.
<i>CFG-HW-ANT_SUP_ENGINE</i>	0x20a30054	E1	-	-	Antenna supervisor engine selection Select the engine used to evaluate antenna state. The EXT engine uses an external comparator for current measurement. The MADC engine uses built-in measurement ADC and requires only a shunt resistor for current measurement. The MADC engine is available in u-blox generation 9 receivers. See <a href="#">Table 11</a> below for a list of possible constants for this item.
<i>CFG-HW-ANT_SUP_SHORT_THR</i>	0x20a30055	U1	-	mV	Antenna supervisor MADC engine short detection threshold Threshold above which antenna short is detected. Used by MADC engine.
<i>CFG-HW-ANT_SUP_OPEN_THR</i>	0x20a30056	U1	-	mV	Antenna supervisor MADC engine open detection threshold Threshold below which antenna open/disconnected is detected. Used by MADC engine.

**Table 9: CFG-HW configuration items**

Constant	Value	Description
<i>DISABLED</i>	0	Disable Wake-On-Motion feature.
<i>HOST</i>	1	Enable Wake-On-Motion feature on the host CPU.
<i>RECEIVER</i>	2	Enable Wake-On-Motion feature on the receiver.
<i>BOTH</i>	3	Enable Wake-On-Motion feature on both host CPU and receiver.

**Table 10: Constants for CFG-HW-SENS\_WOM\_MODE**

Constant	Value	Description
<i>EXT</i>	0	Use the EXT engine.

Constant	Value	Description
<i>MADC</i>	1	Use the MADC engine.

**Table 11: Constants for CFG-HW-ANT\_SUP\_ENGINE**

#### 4.9.4 CFG-I2C: Configuration of the I2C interface

Settings needed to configure the I2C communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-I2C-ADDRESS</i>	0x20510001	U1	-	-	I2C slave address of the receiver (7 bits)
<i>CFG-I2C-EXTENDEDTIMEOUT</i>	0x10510002	L	-	-	Flag to disable timeouting the interface after 1.5 s
<i>CFG-I2C-ENABLED</i>	0x10510003	L	-	-	Flag to indicate if the I2C interface should be enabled

**Table 12: CFG-I2C configuration items**

#### 4.9.5 CFG-I2CINPROT: Input protocol configuration of the I2C interface

Input protocol enable flags of the I2C interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-I2CINPROT-UBX</i>	0x10710001	L	-	-	Flag to indicate if UBX should be an input protocol on I2C
<i>CFG-I2CINPROT-NMEA</i>	0x10710002	L	-	-	Flag to indicate if NMEA should be an input protocol on I2C

**Table 13: CFG-I2CINPROT configuration items**

#### 4.9.6 CFG-I2COUTPROT: Output protocol configuration of the I2C interface

Output protocol enable flags of the I2C interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-I2COUTPROT-UBX</i>	0x10720001	L	-	-	Flag to indicate if UBX should be an output protocol on I2C
<i>CFG-I2COUTPROT-NMEA</i>	0x10720002	L	-	-	Flag to indicate if NMEA should be an output protocol on I2C

**Table 14: CFG-I2COUTPROT configuration items**

#### 4.9.7 CFG-INFMSG: Information message configuration

Information message configuration for the NMEA and UBX protocols.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-INFMSG-UBX_I2C</i>	0x20920001	X1	-	-	Information message enable flags for the UBX protocol on the I2C interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-UBX_UART1</i>	0x20920002	X1	-	-	Information message enable flags for the UBX protocol on the UART1 interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-UBX_UART2</i>	0x20920003	X1	-	-	Information message enable flags for the UBX protocol on the UART2 interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-UBX_USB</i>	0x20920004	X1	-	-	Information message enable flags for the UBX protocol on the USB interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-INFMSG-UBX_SPI</i>	0x20920005	X1	-	-	Information message enable flags for the UBX protocol on the SPI interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_I2C</i>	0x20920006	X1	-	-	Information message enable flags for the NMEA protocol on the I2C interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_UART1</i>	0x20920007	X1	-	-	Information message enable flags for the NMEA protocol on the UART1 interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_UART2</i>	0x20920008	X1	-	-	Information message enable flags for the NMEA protocol on the UART2 interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_USB</i>	0x20920009	X1	-	-	Information message enable flags for the NMEA protocol on the USB interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_SPI</i>	0x2092000a	X1	-	-	Information message enable flags for the NMEA protocol on the SPI interface
See <a href="#">Table 16</a> below for a list of possible constants for this item.					

**Table 15: CFG-INFMSG configuration items**

Constant	Value	Description
<i>ERROR</i>	0x01	Enable ERROR information messages
<i>WARNING</i>	0x02	Enable WARNING information messages
<i>NOTICE</i>	0x04	Enable NOTICE information messages
<i>TEST</i>	0x08	Enable TEST information messages
<i>DEBUG</i>	0x10	Enable DEBUG information messages

**Table 16: Constants for CFG-INFMSG-UBX\_I2C, CFG-INFMSG-UBX\_UART1, CFG-INFMSG-UBX\_UART2, CFG-INFMSG-UBX\_USB, CFG-INFMSG-UBX\_SPI, CFG-INFMSG-NMEA\_I2C, CFG-INFMSG-NMEA\_UART1, CFG-INFMSG-NMEA\_UART2, CFG-INFMSG-NMEA\_USB, CFG-INFMSG-NMEA\_SPI**

#### 4.9.8 CFG-MOT: Motion detector configuration

The items in this group specify the parameters used for the internal receiver motion detector. The platform motion is assessed by combining the detected motion of different detectors looking at specific data types (i.e. GNSS, gyroscopes, accelerometers, wheel ticks). The decision thresholds of the internal detectors can be specified using the configuration items in this group.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MOT-GNSSSPEED_THRS</i>	0x20250038	U1	0.01	m/s	GNSS speed threshold below which platform is considered as stationary (a.k.a. static hold threshold)
Set this parameter to 0 for firmware default value or behavior.					
<i>CFG-MOT-GNSSDIST_THRS</i>	0x3025003b	U2	-	-	Distance above which GNSS-based stationary motion is exit (a.k.a. static hold distance threshold)
Set this parameter to 0 for firmware default value or behavior.					

**Table 17: CFG-MOT configuration items**

#### 4.9.9 CFG-MSGOUT: Message output configuration

For each message and port a separate output rate (per second, per epoch) can be configured.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGOUT-NMEA_ID_DTM_I2C</i>	0x209100a6	U1	-	-	Output rate of the NMEA-GX-DTM message on port I2C
<i>CFG-MSGOUT-NMEA_ID_DTM_SPI</i>	0x209100aa	U1	-	-	Output rate of the NMEA-GX-DTM message on port SPI
<i>CFG-MSGOUT-NMEA_ID_DTM_UART1</i>	0x209100a7	U1	-	-	Output rate of the NMEA-GX-DTM message on port UART1
<i>CFG-MSGOUT-NMEA_ID_DTM_UART2</i>	0x209100a8	U1	-	-	Output rate of the NMEA-GX-DTM message on port UART2
<i>CFG-MSGOUT-NMEA_ID_DTM_USB</i>	0x209100a9	U1	-	-	Output rate of the NMEA-GX-DTM message on port USB
<i>CFG-MSGOUT-NMEA_ID_GBS_I2C</i>	0x209100dd	U1	-	-	Output rate of the NMEA-GX-GBS message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GBS_SPI</i>	0x209100e1	U1	-	-	Output rate of the NMEA-GX-GBS message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GBS_UART1</i>	0x209100de	U1	-	-	Output rate of the NMEA-GX-GBS message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GBS_UART2</i>	0x209100df	U1	-	-	Output rate of the NMEA-GX-GBS message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GBS_USB</i>	0x209100e0	U1	-	-	Output rate of the NMEA-GX-GBS message on port USB
<i>CFG-MSGOUT-NMEA_ID_GGA_I2C</i>	0x209100ba	U1	-	-	Output rate of the NMEA-GX-GGA message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GGA_SPI</i>	0x209100be	U1	-	-	Output rate of the NMEA-GX-GGA message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GGA_UART1</i>	0x209100bb	U1	-	-	Output rate of the NMEA-GX-GGA message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GGA_UART2</i>	0x209100bc	U1	-	-	Output rate of the NMEA-GX-GGA message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GGA_USB</i>	0x209100bd	U1	-	-	Output rate of the NMEA-GX-GGA message on port USB
<i>CFG-MSGOUT-NMEA_ID_GLL_I2C</i>	0x209100c9	U1	-	-	Output rate of the NMEA-GX-GLL message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GLL_SPI</i>	0x209100cd	U1	-	-	Output rate of the NMEA-GX-GLL message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GLL_UART1</i>	0x209100ca	U1	-	-	Output rate of the NMEA-GX-GLL message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GLL_UART2</i>	0x209100cb	U1	-	-	Output rate of the NMEA-GX-GLL message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GLL_USB</i>	0x209100cc	U1	-	-	Output rate of the NMEA-GX-GLL message on port USB
<i>CFG-MSGOUT-NMEA_ID_GNS_I2C</i>	0x209100b5	U1	-	-	Output rate of the NMEA-GX-GNS message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GNS_SPI</i>	0x209100b9	U1	-	-	Output rate of the NMEA-GX-GNS message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GNS_UART1</i>	0x209100b6	U1	-	-	Output rate of the NMEA-GX-GNS message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GNS_UART2</i>	0x209100b7	U1	-	-	Output rate of the NMEA-GX-GNS message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GNS_USB</i>	0x209100b8	U1	-	-	Output rate of the NMEA-GX-GNS message on port USB
<i>CFG-MSGOUT-NMEA_ID_GRS_I2C</i>	0x209100ce	U1	-	-	Output rate of the NMEA-GX-GRS message on port I2C

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGOUT-NMEA_ID_GRS_SPI</i>	0x209100d2	U1	-	-	Output rate of the NMEA-GX-GRS message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GRS_UART1</i>	0x209100cf	U1	-	-	Output rate of the NMEA-GX-GRS message on port UART1

<i>CFG-MSGGOUT-UBX_RXM_SFRBX_SPI</i>	0x20910235	U1	-	-	Output rate of the UBX-RXM-SFRBX message on port SPI
<i>CFG-MSGGOUT-UBX_RXM_SFRBX_UART1</i>	0x20910232	U1	-	-	Output rate of the UBX-RXM-SFRBX message on port UART1
<i>CFG-MSGGOUT-UBX_RXM_SFRBX_UART2</i>	0x20910233	U1	-	-	Output rate of the UBX-RXM-SFRBX message on port UART2
<i>CFG-MSGGOUT-UBX_RXM_SFRBX_USB</i>	0x20910234	U1	-	-	Output rate of the UBX-RXM-SFRBX message on port USB
<i>CFG-MSGGOUT-UBX_SEC_SIGLOG_I2C</i>	0x20910689	U1	-	-	Output rate of the UBX-SEC-SIGLOG message on port I2C
<i>CFG-MSGGOUT-UBX_SEC_SIGLOG_SPI</i>	0x2091068d	U1	-	-	Output rate of the UBX-SEC-SIGLOG message on port SPI
<i>CFG-MSGGOUT-UBX_SEC_SIGLOG_UART1</i>	0x2091068a	U1	-	-	Output rate of the UBX-SEC-SIGLOG message on port UART1
<i>CFG-MSGGOUT-UBX_SEC_SIGLOG_UART2</i>	0x2091068b	U1	-	-	Output rate of the UBX-SEC-SIGLOG message on port UART2

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGOUT-UBX_SEC_SIGLOG_USB</i>	0x2091068c	U1	-	-	Output rate of the UBX-SEC-SIGLOG message on port USB
<i>CFG-MSGOUT-UBX_SEC_SIG_I2C</i>	0x20910634	U1	-	-	Output rate of the UBX-DBG-SKYMAP message on port I2C
<i>CFG-MSGOUT-UBX_SEC_SIG_SPI</i>	0x20910638	U1	-	-	Output rate of the UBX-SEC-SIG message on port SPI
<i>CFG-MSGOUT-UBX_SEC_SIG_UART1</i>	0x20910635	U1	-	-	Output rate of the UBX-SEC-SIG message on port UART1
<i>CFG-MSGOUT-UBX_SEC_SIG_UART2</i>	0x20910636	U1	-	-	Output rate of the UBX-SEC-SIG message on port UART2
<i>CFG-MSGOUT-UBX_SEC_SIG_USB</i>	0x20910637	U1	-	-	Output rate of the UBX-SEC-SIG message on port USB
<i>CFG-MSGOUT-UBX_TIM_TM2_I2C</i>	0x20910178	U1	-	-	Output rate of the UBX-TIM-TM2 message on port I2C
<i>CFG-MSGOUT-UBX_TIM_TM2_SPI</i>	0x2091017c	U1	-	-	Output rate of the UBX-TIM-TM2 message on port SPI
<i>CFG-MSGOUT-UBX_TIM_TM2_UART1</i>	0x20910179	U1	-	-	Output rate of the UBX-TIM-TM2 message on port UART1
<i>CFG-MSGOUT-UBX_TIM_TM2_UART2</i>	0x2091017a	U1	-	-	Output rate of the UBX-TIM-TM2 message on port UART2
<i>CFG-MSGOUT-UBX_TIM_TM2_USB</i>	0x2091017b	U1	-	-	Output rate of the UBX-TIM-TM2 message on port USB
<i>CFG-MSGOUT-UBX_TIM_TP_I2C</i>	0x2091017d	U1	-	-	Output rate of the UBX-TIM-TP message on port I2C
<i>CFG-MSGOUT-UBX_TIM_TP_SPI</i>	0x20910181	U1	-	-	Output rate of the UBX-TIM-TP message on port SPI
<i>CFG-MSGOUT-UBX_TIM_TP_UART1</i>	0x2091017e	U1	-	-	Output rate of the UBX-TIM-TP message on port UART1
<i>CFG-MSGOUT-UBX_TIM_TP_UART2</i>	0x2091017f	U1	-	-	Output rate of the UBX-TIM-TP message on port UART2
<i>CFG-MSGOUT-UBX_TIM_TP_USB</i>	0x20910180	U1	-	-	Output rate of the UBX-TIM-TP message on port USB
<i>CFG-MSGOUT-UBX_TIM_VRFY_I2C</i>	0x20910092	U1	-	-	Output rate of the UBX-TIM-VRFY message on port I2C
<i>CFG-MSGOUT-UBX_TIM_VRFY_SPI</i>	0x20910096	U1	-	-	Output rate of the UBX-TIM-VRFY message on port SPI
<i>CFG-MSGOUT-UBX_TIM_VRFY_UART1</i>	0x20910093	U1	-	-	Output rate of the UBX-TIM-VRFY message on port UART1
<i>CFG-MSGOUT-UBX_TIM_VRFY_UART2</i>	0x20910094	U1	-	-	Output rate of the UBX-TIM-VRFY message on port UART2
<i>CFG-MSGOUT-UBX_TIM_VRFY_USB</i>	0x20910095	U1	-	-	Output rate of the UBX-TIM-VRFY message on port USB

**Table 18: CFG-MSGOUT configuration items**

#### 4.9.10 CFG-NAV2: Secondary output configuration

This group contains configuration items related to the secondary (NAV2) output.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NAV2-OUT_ENABLED</i>	0x10170001	L	-	-	Enable secondary (NAV2) output Enables the secondary output (GNSS standalone output). It can be used simultaneously with the available primary output (high precision, sensor fusion or time mode output).

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NAV2-SBAS_USE_INTEGRITY</i>	0x10170002	L	-	-	Use SBAS integrity information in the secondary output

If enabled, the receiver will only use GPS satellites for which integrity information is available. This configuration item allows configuring the SBAS integrity feature differently for the primary output and the secondary output. For configuring the primary output, see *CFG-SBAS-USE\_INTEGRITY*.

**Table 19: CFG-NAV2 configuration items**

#### 4.9.11 CFG-NAVSPG: Standard precision navigation configuration

This group contains configuration items related to the operation of the receiver at standard precision, including configuring position fix mode, ionospheric model selection and other related items.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NAVSPG-FIXMODE</i>	0x20110011	E1	-	-	Position fix mode
See <a href="#">Table 21</a> below for a list of possible constants for this item.					
<i>CFG-NAVSPG-INIFIX3D</i>	0x10110013	L	-	-	Initial fix must be a 3D fix
<i>CFG-NAVSPG-WKNROLLOVER</i>	0x30110017	U2	-	-	GPS week rollover number
GPS week numbers will be set correctly from this week up to 1024 weeks after this week. Range is from 1 to 4096.					
<i>CFG-NAVSPG-UTCSTANDARD</i>	0x2011001c	E1	-	-	UTC standard to be used
See section GNSS time base in the integration manual. See <a href="#">Table 22</a> below for a list of possible constants for this item.					
<i>CFG-NAVSPG-DYNMODEL</i>	0x20110021	E1	-	-	Dynamic platform model
See <a href="#">Table 23</a> below for a list of possible constants for this item.					
<i>CFG-NAVSPG-ACKAIDING</i>	0x10110025	L	-	-	Acknowledge assistance input messages
<i>CFG-NAVSPG-USE_USRDAT</i>	0x10110061	L	-	-	Use user geodetic datum parameters
This must be set together with all <i>CFG-NAVSPG-USERDAT_*</i> parameters.					
<i>CFG-NAVSPG-USRDAT_MAJA</i>	0x50110062	R8	-	m	Geodetic datum semi-major axis
Accepted range is from 6,300,000.0 to 6,500,000.0 meters This will only be used if <i>CFG-NAVSPG-USE_USERDAT</i> is set. It must be set together with all other <i>CFG-NAVSPG-USERDAT_*</i> parameters.					
<i>CFG-NAVSPG-USRDAT_FLAT</i>	0x50110063	R8	-	-	Geodetic datum 1.0 / flattening
Accepted range is 0.0 to 500.0. This will only be used if <i>CFG-NAVSPG-USE_USERDAT</i> is set. It must be set together with all other <i>CFG-NAVSPG-USERDAT_*</i> parameters.					
<i>CFG-NAVSPG-USRDAT_DX</i>	0x40110064	R4	-	m	Geodetic datum X axis shift at the origin
Accepted range is +/- 5000.0 meters. This will only be used if <i>CFG-NAVSPG-USE_USERDAT</i> is set. It must be set together with all other <i>CFG-NAVSPG-USERDAT_*</i> parameters.					
<i>CFG-NAVSPG-USRDAT_DY</i>	0x40110065	R4	-	m	Geodetic datum Y axis shift at the origin
Accepted range is +/- 5000.0 meters. This will only be used if <i>CFG-NAVSPG-USE_USERDAT</i> is set. It must be set together with all other <i>CFG-NAVSPG-USERDAT_*</i> parameters.					
<i>CFG-NAVSPG-USRDAT_DZ</i>	0x40110066	R4	-	m	Geodetic datum Z axis shift at the origin
Accepted range is +/- 5000.0 meters. This will only be used if <i>CFG-NAVSPG-USE_USERDAT</i> is set. It must be set together with all other <i>CFG-NAVSPG-USERDAT_*</i> parameters.					

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NAVSPG-USRDAT_ROT_X</i>	0x40110067	R4	-	arcsec	Geodetic datum rotation about the X axis Accepted range is +/- 20.0 milli arc seconds. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
<i>CFG-NAVSPG-USRDAT_ROT_Y</i>	0x40110068	R4	-	arcsec	Geodetic datum rotation about the Y axis () Accepted range is +/- 20.0 milli-arc seconds. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_* parameters.
<i>CFG-NAVSPG-USRDAT_ROT_Z</i>	0x40110069	R4	-	arcsec	Geodetic datum rotation about the Z axis Accepted range is +/- 20.0 milli-arc seconds. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
<i>CFG-NAVSPG-USRDAT_SCALE</i>	0x4011006a	R4	-	ppm	Geodetic datum scale factor Accepted range is 0.0 to 50.0 parts per million. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
<i>CFG-NAVSPG-INFIL_MINSVS</i>	0x201100a1	U1	-	-	Minimum number of satellites for navigation
<i>CFG-NAVSPG-INFIL_MAXSVS</i>	0x201100a2	U1	-	-	Maximum number of satellites for navigation
<i>CFG-NAVSPG-INFIL_MINCNO</i>	0x201100a3	U1	-	dBHz	Minimum satellite signal level for navigation
<i>CFG-NAVSPG-INFIL_MINELEV</i>	0x201100a4	I1	-	deg	Minimum elevation for a GNSS satellite to be used in navigation
<i>CFG-NAVSPG-INFIL_NCNOTHRS</i>	0x201100aa	U1	-	-	Number of satellites required to have C/N0 above CFG-NAVSPG-INFIL_CNOTHRS for a fix to be attempted
<i>CFG-NAVSPG-INFIL_CNOTHRS</i>	0x201100ab	U1	-	-	C/N0 threshold for deciding whether to attempt a fix
<i>CFG-NAVSPG-OUTFIL_PDOP</i>	0x301100b1	U2	0.1	-	Output filter position DOP mask (threshold)
<i>CFG-NAVSPG-OUTFIL_TDOP</i>	0x301100b2	U2	0.1	-	Output filter time DOP mask (threshold)
<i>CFG-NAVSPG-OUTFIL_PACC</i>	0x301100b3	U2	-	m	Output filter position accuracy mask (threshold)
<i>CFG-NAVSPG-OUTFIL_TACC</i>	0x301100b4	U2	-	m	Output filter time accuracy mask (threshold)
<i>CFG-NAVSPG-OUTFIL_FACC</i>	0x301100b5	U2	0.01	m/s	Output filter frequency accuracy mask (threshold)
<i>CFG-NAVSPG-CONSTR_ALT</i>	0x401100c1	I4	0.01	m	Fixed altitude (mean sea level) for 2D fix mode
<i>CFG-NAVSPG-CONSTR_ALTVAR</i>	0x401100c2	U4	0.0001	m^2	Fixed altitude variance for 2D mode
<i>CFG-NAVSPG-CONSTR_DGNSSSTO</i>	0x201100c4	U1	-	s	DGNSS timeout
<i>CFG-NAVSPG-SIGATTCOMP</i>	0x201100d6	E1	-	-	Permanently attenuated signal compensation mode

See [Table 24](#) below for a list of possible constants for this item.

**Table 20: CFG-NAVSPG configuration items**

Constant	Value	Description
<i>2DONLY</i>	1	2D only
<i>3DONLY</i>	2	3D only
<i>AUTO</i>	3	Auto 2D/3D

**Table 21: Constants for CFG-NAVSPG-FIXMODE**

Constant	Value	Description
<i>AUTO</i>	0	Automatic; receiver selects based on GNSS configuration
<i>USNO</i>	3	UTC as operated by the U.S. Naval Observatory (USNO); derived from GPS time
<i>EU</i>	5	UTC as combined from multiple European laboratories; derived from Galileo time
<i>SU</i>	6	UTC as operated by the former Soviet Union (SU); derived from GLONASS time
<i>NTSC</i>	7	UTC as operated by the National Time Service Center (NTSC), China; derived from BeiDou time
<i>NPLI</i>	8	UTC as operated by the National Physics Laboratory, India (NPLI); derived from NavIC time
<i>NICT</i>	9	UTC as operated by the National Institute of Information and Communications Technology, Japan (NICT); derived from QZSS time

**Table 22: Constants for CFG-NAVSPG-UTCSTANDARD**

Constant	Value	Description
<i>PORT</i>	0	Portable
<i>STAT</i>	2	Stationary
<i>PED</i>	3	Pedestrian
<i>AUTOMOT</i>	4	Automotive
<i>SEA</i>	5	Sea
<i>AIR1</i>	6	Airborne with <1g acceleration
<i>AIR2</i>	7	Airborne with <2g acceleration
<i>AIR4</i>	8	Airborne with <4g acceleration
<i>WRIST</i>	9	Wrist-worn watch (not available in all products)
<i>BIKE</i>	10	Motorbike (not available in all products)
<i>MOWER</i>	11	Robotic lawn mower (not available in all products)
<i>ESCOOTER</i>	12	E-scooter (not available in all products)

**Table 23: Constants for CFG-NAVSPG-DYNMODEL**

Constant	Value	Description
<i>DIS</i>	0	Disable signal attenuation compensation
<i>AUTO</i>	255	Automatic signal attenuation compensation
<i>01DBHZ</i>	1	Maximum expected C/NO level is 1 dBHz
<i>02DBHZ</i>	2	Maximum expected C/NO level is 2 dBHz
<i>03DBHZ</i>	3	Maximum expected C/NO level is 3 dBHz
<i>04DBHZ</i>	4	Maximum expected C/NO level is 4 dBHz
<i>05DBHZ</i>	5	Maximum expected C/NO level is 5 dBHz
<i>06DBHZ</i>	6	Maximum expected C/NO level is 6 dBHz
<i>07DBHZ</i>	7	Maximum expected C/NO level is 7 dBHz
<i>08DBHZ</i>	8	Maximum expected C/NO level is 8 dBHz
<i>09DBHZ</i>	9	Maximum expected C/NO level is 9 dBHz
<i>10DBHZ</i>	10	Maximum expected C/NO level is 10 dBHz
<i>11DBHZ</i>	11	Maximum expected C/NO level is 11 dBHz
<i>12DBHZ</i>	12	Maximum expected C/NO level is 12 dBHz

Constant	Value	Description
13DBHZ	13	Maximum expected C/NO level is 13 dBHz
14DBHZ	14	Maximum expected C/NO level is 14 dBHz
15DBHZ	15	Maximum expected C/NO level is 15 dBHz
16DBHZ	16	Maximum expected C/NO level is 16 dBHz
17DBHZ	17	Maximum expected C/NO level is 17 dBHz
18DBHZ	18	Maximum expected C/NO level is 18 dBHz
19DBHZ	19	Maximum expected C/NO level is 19 dBHz
20DBHZ	20	Maximum expected C/NO level is 20 dBHz
21DBHZ	21	Maximum expected C/NO level is 21 dBHz
22DBHZ	22	Maximum expected C/NO level is 22 dBHz
23DBHZ	23	Maximum expected C/NO level is 23 dBHz
24DBHZ	24	Maximum expected C/NO level is 24 dBHz
25DBHZ	25	Maximum expected C/NO level is 25 dBHz
26DBHZ	26	Maximum expected C/NO level is 26 dBHz
27DBHZ	27	Maximum expected C/NO level is 27 dBHz
28DBHZ	28	Maximum expected C/NO level is 28 dBHz
29DBHZ	29	Maximum expected C/NO level is 29 dBHz
30DBHZ	30	Maximum expected C/NO level is 30 dBHz
31DBHZ	31	Maximum expected C/NO level is 31 dBHz
32DBHZ	32	Maximum expected C/NO level is 32 dBHz
33DBHZ	33	Maximum expected C/NO level is 33 dBHz
34DBHZ	34	Maximum expected C/NO level is 34 dBHz
35DBHZ	35	Maximum expected C/NO level is 35 dBHz
36DBHZ	36	Maximum expected C/NO level is 36 dBHz
37DBHZ	37	Maximum expected C/NO level is 37 dBHz
38DBHZ	38	Maximum expected C/NO level is 38 dBHz
39DBHZ	39	Maximum expected C/NO level is 39 dBHz
40DBHZ	40	Maximum expected C/NO level is 40 dBHz
41DBHZ	41	Maximum expected C/NO level is 41 dBHz
42DBHZ	42	Maximum expected C/NO level is 42 dBHz
43DBHZ	43	Maximum expected C/NO level is 43 dBHz
44DBHZ	44	Maximum expected C/NO level is 44 dBHz
45DBHZ	45	Maximum expected C/NO level is 45 dBHz
46DBHZ	46	Maximum expected C/NO level is 46 dBHz
47DBHZ	47	Maximum expected C/NO level is 47 dBHz
48DBHZ	48	Maximum expected C/NO level is 48 dBHz
49DBHZ	49	Maximum expected C/NO level is 49 dBHz
50DBHZ	50	Maximum expected C/NO level is 50 dBHz
51DBHZ	51	Maximum expected C/NO level is 51 dBHz
52DBHZ	52	Maximum expected C/NO level is 52 dBHz
53DBHZ	53	Maximum expected C/NO level is 53 dBHz

Constant	Value	Description
54DBHZ	54	Maximum expected C/NO level is 54 dBHz
55DBHZ	55	Maximum expected C/NO level is 55 dBHz
56DBHZ	56	Maximum expected C/NO level is 56 dBHz
57DBHZ	57	Maximum expected C/NO level is 57 dBHz
58DBHZ	58	Maximum expected C/NO level is 58 dBHz
59DBHZ	59	Maximum expected C/NO level is 59 dBHz
60DBHZ	60	Maximum expected C/NO level is 60 dBHz
61DBHZ	61	Maximum expected C/NO level is 61 dBHz
62DBHZ	62	Maximum expected C/NO level is 62 dBHz
63DBHZ	63	Maximum expected C/NO level is 63 dBHz

**Table 24: Constants for CFG-NAVSPG-SIGATTCOMP**

#### 4.9.12 CFG-NMEA: NMEA protocol configuration

This group configures the [NMEA protocol](#). See section [NMEA protocol configuration](#) for a detailed description of the configuration effects on NMEA output.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NMEA-PROTVR	0x20930001	E1	-	-	NMEA protocol version See <a href="#">Table 26</a> below for a list of possible constants for this item.
CFG-NMEA-MAXSVS	0x20930002	E1	-	-	Maximum number of SVs to report per Talker ID See <a href="#">Table 27</a> below for a list of possible constants for this item.
CFG-NMEA-COMPAT	0x10930003	L	-	-	Enable compatibility mode This might be needed for certain applications, e.g. for an NMEA parser that expects a fixed number of digits in position coordinates.
CFG-NMEA-CONSIDER	0x10930004	L	-	-	Enable considering mode This will affect NMEA output used satellite count. If set, also considered satellites (e.g. RAIMED) are counted as used satellites as well.
CFG-NMEA-LIMIT82	0x10930005	L	-	-	Enable strict limit to 82 characters maximum NMEA message length
CFG-NMEA-HIGHPREC	0x10930006	L	-	-	Enable high precision mode This flag cannot be set in conjunction with either CFG-NMEA-COMPAT or CFG-NMEA-LIMIT82 mode.
CFG-NMEA-SVNUMBERING	0x20930007	E1	-	-	Display configuration for SVs that do not have value defined in NMEA Configures the display of satellites that do not have an NMEA-defined value. Note: this does not apply to satellites with an unknown ID. See also <a href="#">Satellite Numbering</a> . See <a href="#">Table 28</a> below for a list of possible constants for this item.
CFG-NMEA-FILT_GPS	0x10930011	L	-	-	Disable reporting of GPS satellites
CFG-NMEA-FILT_SBAS	0x10930012	L	-	-	Disable reporting of SBAS satellites
CFG-NMEA-FILT_GAL	0x10930013	L	-	-	Disable reporting of Galileo satellites
CFG-NMEA-FILT_QZSS	0x10930015	L	-	-	Disable reporting of QZSS satellites
CFG-NMEA-FILT_GLO	0x10930016	L	-	-	Disable reporting of GLONASS satellites
CFG-NMEA-FILT_BDS	0x10930017	L	-	-	Disable reporting of BeiDou satellites
CFG-NMEA-OUT_INVFIX	0x10930021	L	-	-	Enable position output for failed or invalid fixes
CFG-NMEA-OUT_MSKFIX	0x10930022	L	-	-	Enable position output for invalid fixes

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NMEA-OUT_INVTIME</i>	0x10930023	L	-	-	Enable time output for invalid times
<i>CFG-NMEA-OUT_INVDATE</i>	0x10930024	L	-	-	Enable date output for invalid dates
<i>CFG-NMEA-OUT_ONLYGPS</i>	0x10930025	L	-	-	Restrict output to GPS satellites only
<i>CFG-NMEA-OUT_FROZENCOG</i>	0x10930026	L	-	-	Enable course over ground output even if it is frozen
<i>CFG-NMEA-MAINTALKERID</i>	0x20930031	E1	-	-	Main Talker ID By default the main Talker ID (i.e. the Talker ID used for all messages other than GSV) is determined by the GNSS assignment of the receiver's channels (see <a href="#">CFG-SIGNAL</a> ). This field enables the main Talker ID to be overridden. See <a href="#">Table 29</a> below for a list of possible constants for this item.
<i>CFG-NMEA-GSVTALKERID</i>	0x20930032	E1	-	-	Talker ID for GSV NMEA messages By default the Talker ID for GSV messages is GNSS-specific (as defined by NMEA). This field enables the GSV Talker ID to be overridden. See <a href="#">Table 30</a> below for a list of possible constants for this item.
<i>CFG-NMEA-BDSTALKERID</i>	0x30930033	U2	-	-	BeiDou Talker ID Sets the two ASCII characters that should be used for the BeiDou Talker ID. If these are set to zero, the default BeiDou Talker ID will be used.

**Table 25: CFG-NMEA configuration items**

Constant	Value	Description
<i>V21</i>	21	NMEA protocol version 2.1
<i>V23</i>	23	NMEA protocol version 2.3
<i>V40</i>	40	NMEA protocol version 4.0 (not available in all products)
<i>V41</i>	41	NMEA protocol version 4.10 (not available in all products)
<i>V411</i>	42	NMEA protocol version 4.11 (not available in all products)

**Table 26: Constants for CFG-NMEA-PROTVR**

Constant	Value	Description
<i>UNLIM</i>	0	Unlimited
<i>8SVS</i>	8	8 SVs
<i>12SVS</i>	12	12 SVs
<i>16SVS</i>	16	16 SVs

**Table 27: Constants for CFG-NMEA-MAXSVS**

Constant	Value	Description
<i>STRICT</i>	0	Strict - satellites are not output
<i>EXTENDED</i>	1	Extended - use proprietary numbering

**Table 28: Constants for CFG-NMEA-SVNUMBERING**

Constant	Value	Description
<i>AUTO</i>	0	Main Talker ID is not overridden
<i>GP</i>	1	Set main Talker ID to 'GP'
<i>GL</i>	2	Set main Talker ID to 'GL'
<i>GN</i>	3	Set main Talker ID to 'GN'
<i>GA</i>	4	Set main Talker ID to 'GA' (not available in all products)
<i>GB</i>	5	Set main Talker ID to 'GB' (not available in all products)

Constant	Value	Description
<i>GQ</i>	7	Set main Talker ID to 'GQ' (not available in all products)

**Table 29: Constants for CFG-NMEA-MAINTALKERID**

Constant	Value	Description
<i>GNSS</i>	0	Use GNSS-specific Talker ID (as defined by NMEA)
<i>MAIN</i>	1	Use the main Talker ID

**Table 30: Constants for CFG-NMEA-GSVTALKERID**

### 4.9.13 CFG-ODO: Odometer and low-speed course over ground filter configuration

The items in this group allow the user to configure the Odometer feature and Low-Speed Course Over Ground Filter.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-ODO-USE_ODO</i>	0x10220001	L	-	-	Use odometer
<i>CFG-ODO-USE_COG</i>	0x10220002	L	-	-	Use low-speed course over ground filter
<i>CFG-ODO-OUTLPVEL</i>	0x10220003	L	-	-	Output low-pass filtered velocity
<i>CFG-ODO-OUTLPCOG</i>	0x10220004	L	-	-	Output low-pass filtered course over ground (heading)
<i>CFG-ODO-PROFILE</i>	0x20220005	E1	-	-	Odometer profile configuration
See <a href="#">Table 32</a> below for a list of possible constants for this item.					
<i>CFG-ODO-COGMAXSPEED</i>	0x20220021	U1	1e-1	m/s	Upper speed limit for low-speed course over ground filter
<i>CFG-ODO-COGMAXPOSACC</i>	0x20220022	U1	-	-	Maximum acceptable position accuracy for computing low-speed filtered course over ground
<i>CFG-ODO-VELLPGAIN</i>	0x20220031	U1	-	-	Velocity low-pass filter level
Range is from 0 to 255.					
<i>CFG-ODO-COGLPGAIN</i>	0x20220032	U1	-	-	Course over ground low-pass filter level (at speed < 8 m/s)
Range is from 0 to 255.					

**Table 31: CFG-ODO configuration items**

Constant	Value	Description
<i>RUN</i>	0	Running
<i>CYCL</i>	1	Cycling
<i>SWIM</i>	2	Swimming
<i>CAR</i>	3	Car
<i>CUSTOM</i>	4	Custom

**Table 32: Constants for CFG-ODO-PROFILE**

### 4.9.14 CFG-QZSS: QZSS system configuration

Note that enabling and disabling of individual GNSS is done via the [CFG-SIGNAL](#) configuration group.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-QZSS-USE_SLAS_DGNSS</i>	0x10370005	L	-	-	Apply QZSS SLAS DGNSS corrections

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-QZSS-USE_SLAS_TESTMODE	0x10370006	L	-	-	Use QZSS SLAS data when it is in test mode (SLAS msg 0)
CFG-QZSS-USE_SLAS_RAIM_UNCORR	0x10370007	L	-	-	Raim out measurements that are not corrected by QZSS SLAS, if at least 5 measurements are corrected
CFG-QZSS-SLAS_MAX_BASELINE	0x30370008	U2	-	km	Maximum baseline distance to closest GMS SLAS corrections are only applied if the receiver is at most this far away from the closest ground monitoring station (GMS). Note that due to the nature of the service, the usefulness of corrections degrades with distance. When far away from GMS, SBAS may be a better correction source.

**Table 33: CFG-QZSS configuration items**

#### 4.9.15 CFG-RATE: Navigation and measurement rate configuration

The configuration items in this group allow the user to alter the rate at which navigation solutions (and the measurements that they depend on) are generated by the receiver. The calculation of the navigation solution will always be aligned to the top of a second zero (first second of the week) of the configured reference time system. The navigation period is an integer multiple of the measurement period.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-RATE-MEAS	0x30210001	U2	0.001	s	Nominal time between GNSS measurements E.g. 100 ms results in 10 Hz measurement rate, 1000 ms = 1 Hz measurement rate. The minimum value is 25.
CFG-RATE-NAV	0x30210002	U2	-	-	Ratio of number of measurements to number of navigation solutions E.g. 5 means five measurements for every navigation solution. The minimum value is 1. The maximum value is 127.
CFG-RATE-TIMEREf	0x20210003	E1	-	-	Time system to which measurements are aligned See <a href="#">Table 35</a> below for a list of possible constants for this item.
CFG-RATE-NAV_Prio	0x20210004	U1	-	Hz	Output rate of priority navigation mode messages

When not zero, the receiver outputs navigation data as a set of messages with two priority levels: 1) *Priority messages*: Navigation solution data are computed and output with high rate and low latency; 2) *Non-priority messages* auxiliary navigation data are computed and output with low rate and higher latency.

When zero, the receiver outputs the navigation data as a set of messages with the same priority.

The *priority messages* are: UBX-NAV-PVT, UBX-NAV-POSECEF, UBX-NAV-POSLLH, UBX-NAV-VELECEF, UBX-NAV-VELNED, UBX-NAV-HPPOSECEF, UBX-NAV-HPPOSLLH, UBX-ESF-INS, UBX-NAV-ATT, UBX-NAV-PVAT, NMEA-Standard-DTM, NMEA-Standard-RMC, NMEA-Standard-VTG, NMEA-Standard-GNS, NMEA-Standard-GGA, NMEA-Standard-GLL, NMEA-Standard-THS and NMEA-PUBX-POSITION. Note that some of these messages are not available on some products.

The allowed range for the priority navigation mode is 0-30 Hz.

See section Priority navigation mode in the integration manual.

**Table 34: CFG-RATE configuration items**

Constant	Value	Description
UTC	0	Align measurements to UTC time
GPS	1	Align measurements to GPS time
GLO	2	Align measurements to GLONASS time
BDS	3	Align measurements to BeiDou time
GAL	4	Align measurements to Galileo time

Constant	Value	Description
NAVIC	5	Align measurements to NavIC time

**Table 35: Constants for CFG-RATE-TIMEREF**

#### 4.9.16 CFG-RINV: Remote inventory

The remote inventory enables storing user-defined data in the non-volatile memory of the receiver. The data can be either binary or a string of ASCII characters. In the latter case, it can optionally be output at startup after the boot screen.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-RINV-DUMP</i>	0x10c70001	L	-	-	Dump data at startup When true, data will be dumped to the interface on startup, unless CFG-RINV-BINARY is set.
<i>CFG-RINV-BINARY</i>	0x10c70002	L	-	-	Data is binary When true, the data is treated as binary data.
<i>CFG-RINV-DATA_SIZE</i>	0x20c70003	U1	-	-	Size of data Size of data to store/be stored in the remote inventory (maximum 30 bytes).
<i>CFG-RINV-CHUNK0</i>	0x50c70004	X8	-	-	Data bytes 1-8 (LSB) Data to store/be stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.
<i>CFG-RINV-CHUNK1</i>	0x50c70005	X8	-	-	Data bytes 9-16 Data to store/be stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.
<i>CFG-RINV-CHUNK2</i>	0x50c70006	X8	-	-	Data bytes 17-24 Data to store/be stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.
<i>CFG-RINV-CHUNK3</i>	0x50c70007	X8	-	-	Data bytes 25-30 (MSB) Data to store/be stored in remote inventory - max 6 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.

**Table 36: CFG-RINV configuration items**

#### 4.9.17 CFG-SBAS: SBAS configuration

This group configures the SBAS receiver subsystem (i.e. WAAS, EGNOS, MSAS). See SBAS configuration settings description in the integration manual for a detailed description of how these settings affect receiver operation.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SBAS-USE_TESTMODE</i>	0x10360002	L	-	-	Use SBAS data when it is in test mode (SBAS msg 0)
<i>CFG-SBAS-USE_RANGING</i>	0x10360003	L	-	-	Use SBAS GEOs as a ranging source (for navigation)
<i>CFG-SBAS-USE_DIFFCORR</i>	0x10360004	L	-	-	Use SBAS differential corrections
<i>CFG-SBAS-USE_INTEGRITY</i>	0x10360005	L	-	-	Use SBAS integrity information If enabled, the receiver will only use GPS satellites for which integrity information is available
<i>CFG-SBAS-ACCEPT_NOT_IN_PRN_MASK</i>	0x30360008	X2	-	-	Accept corrections from SBAS SV, even if not self included in PRN MASK (Message Type 1) If enabled, the receiver will still use the SBAS data, even when the SBAS SV itself is not included in its PRN MASK. This is only useful for BDSBAS and not compatible with current EGNOS implementation. See <a href="#">Table 38</a> below for a list of possible constants for this item.
<i>CFG-SBAS-USE_IONOONLY</i>	0x10360007	L	-	-	Use SBAS ionosphere correction only
<i>CFG-SBAS-PRNSCANMASK</i>	0x50360006	X8	-	-	SBAS PRN search configuration

Configuration item	Key ID	Type	Scale	Unit	Description
This configuration item determines which SBAS PRNs should be searched. Setting it to 0 indicates auto-scanning all SBAS PRNs. For non-zero values the bits correspond to the allocated SBAS PRNs ranging from PRN120 (bit 0) to PRN158 (bit 38), where a bit set enables searching for the corresponding PRN.					
See <a href="#">Table 39</a> below for a list of possible constants for this item.					

**Table 37: CFG-SBAS configuration items**

Constant	Value	Description
WAAS 1 = Use WAAS provider Id.	0x01	WAAS bit
EGNOS 1 = Use EGNOS provider Id.	0x02	EGNOS bit
MSAS 1 = Use MSAS provider Id.	0x04	MSAS bit
GAGAN 1 = Use GAGAN provider Id.	0x08	GAGAN bit
SDCM 1 = Use SDCM provider Id.	0x10	SDCM bit
BDSBAS 1 = Use BDSBAS provider Id.	0x20	BDSBAS bit
KASS 1 = Use KASS provider Id.	0x40	KASS bit

**Table 38: Constants for CFG-SBAS-ACCEPT\_NOT\_IN\_PRNMASK**

Constant	Value	Description
ALL	0x0000000000000000	Enable search for all SBAS PRNs
PRN120	0x0000000000000001	Enable search for SBAS PRN120
PRN121	0x0000000000000002	Enable search for SBAS PRN121
PRN122	0x0000000000000004	Enable search for SBAS PRN122
PRN123	0x0000000000000008	Enable search for SBAS PRN123
PRN124	0x0000000000000010	Enable search for SBAS PRN124
PRN125	0x0000000000000020	Enable search for SBAS PRN125
PRN126	0x0000000000000040	Enable search for SBAS PRN126
PRN127	0x0000000000000080	Enable search for SBAS PRN127
PRN128	0x0000000000000100	Enable search for SBAS PRN128
PRN129	0x0000000000000200	Enable search for SBAS PRN129
PRN130	0x0000000000000400	Enable search for SBAS PRN130
PRN131	0x0000000000000800	Enable search for SBAS PRN131
PRN132	0x0000000000001000	Enable search for SBAS PRN132
PRN133	0x0000000000002000	Enable search for SBAS PRN133
PRN134	0x0000000000004000	Enable search for SBAS PRN134
PRN135	0x0000000000008000	Enable search for SBAS PRN135
PRN136	0x0000000000010000	Enable search for SBAS PRN136
PRN137	0x0000000000020000	Enable search for SBAS PRN137
PRN138	0x0000000000040000	Enable search for SBAS PRN138

Constant	Value	Description
PRN139	0x00000000000080000	Enable search for SBAS PRN139
PRN140	0x00000000000100000	Enable search for SBAS PRN140
PRN141	0x00000000000200000	Enable search for SBAS PRN141
PRN142	0x00000000000400000	Enable search for SBAS PRN142
PRN143	0x00000000000800000	Enable search for SBAS PRN143
PRN144	0x00000000010000000	Enable search for SBAS PRN144
PRN145	0x00000000020000000	Enable search for SBAS PRN145
PRN146	0x00000000040000000	Enable search for SBAS PRN146
PRN147	0x00000000080000000	Enable search for SBAS PRN147
PRN148	0x00000000100000000	Enable search for SBAS PRN148
PRN149	0x00000000200000000	Enable search for SBAS PRN149
PRN150	0x00000000400000000	Enable search for SBAS PRN150
PRN151	0x00000000800000000	Enable search for SBAS PRN151
PRN152	0x00000001000000000	Enable search for SBAS PRN152
PRN153	0x00000002000000000	Enable search for SBAS PRN153
PRN154	0x00000004000000000	Enable search for SBAS PRN154
PRN155	0x00000008000000000	Enable search for SBAS PRN155
PRN156	0x00000010000000000	Enable search for SBAS PRN156
PRN157	0x00000020000000000	Enable search for SBAS PRN157
PRN158	0x00000040000000000	Enable search for SBAS PRN158

**Table 39: Constants for CFG-SBAS-PRNSCANMASK**

#### 4.9.18 CFG-SEC: Security configuration

Security configuration.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SEC-CFG_LOCK	0x10f60009	L	-	-	Configuration lockdown When set, receiver configuration is locked and cannot be changed any more.
CFG-SEC-CFG_LOCK_UNLOCKGRP1	0x30f6000a	U2	-	-	Configuration lockdown exempted group 1 This item can be set before enabling the configuration lockdown. It will make writes to the specified group possible after the configuration lockdown has been enabled.
CFG-SEC-CFG_LOCK_UNLOCKGRP2	0x30f6000b	U2	-	-	Configuration lockdown exempted group 2 This item can be set before enabling the configuration lockdown. It will make writes to the specified group possible after the configuration lockdown has been enabled.
CFG-SEC-JAMDET_SENSITIVITY_HI	0x10f60051	L	-	-	When set, go for a more sensitive jamming detection (at the cost of increased false alarm rate).

**Table 40: CFG-SEC configuration items**

#### 4.9.19 CFG-SFCORE: Sensor fusion (SF) core configuration

This group contains configuration items for dead reckoning (DR) products.

More details on the configuration parameters can be found in the ADR section of the integration manual.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SFCORE-USE_SF</i>	0x10080001	L	-	-	Use ADR/UDR sensor fusion

**Table 41: CFG-SFCORE configuration items**

#### 4.9.20 CFG-SFIMU: Sensor fusion (SF) inertial measurement unit (IMU) configuration

This group contains configuration items related to the Inertial Measurement Unit (IMU) for Dead Reckoning (DR) products.

More details on the configuration parameters can be found in the sensor fusion sections of the integration manual.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SFIMU-GYRO_TC_UPDATE_PERIOD</i>	0x30060007	U2	-	s	Time period between each update for the saved temperature-dependent gyroscope bias table
<i>CFG-SFIMU-GYRO_RMSTHDL</i>	0x20060008	U1	2 <sup>-8</sup>	deg/s	Gyroscope sensor RMS threshold Gyroscope sensor RMS threshold below which automatically estimated gyroscope noise-level (accuracy) is updated.
<i>CFG-SFIMU-GYRO_FREQUENCY</i>	0x20060009	U1	-	Hz	Nominal gyroscope sensor data sampling frequency
<i>CFG-SFIMU-GYRO_LATENCY</i>	0x3006000a	U2	-	ms	Gyroscope sensor data latency due to e.g. CAN bus
<i>CFG-SFIMU-GYRO_ACCURACY</i>	0x3006000b	U2	1e-3	deg/s	Gyroscope sensor data accuracy Accuracy of gyroscope sensor data. If GYRO_ACCURACY is not set, the accuracy is estimated automatically.
<i>CFG-SFIMU-ACCEL_RMSTHDL</i>	0x20060015	U1	2 <sup>-6</sup>	m/s <sup>2</sup>	Accelerometer RMS threshold Accelerometer RMS threshold below which automatically estimated accelerometer noise-level (accuracy) is updated.
<i>CFG-SFIMU-ACCEL_FREQUENCY</i>	0x20060016	U1	-	Hz	Nominal accelerometer sensor data sampling frequency
<i>CFG-SFIMU-ACCEL_LATENCY</i>	0x30060017	U2	-	ms	Accelerometer sensor data latency due to e.g. CAN bus
<i>CFG-SFIMU-ACCEL_ACCURACY</i>	0x30060018	U2	1e-4	m/s <sup>2</sup>	Accelerometer sensor data accuracy Accuracy of accelerometer sensor data. If ACCEL_ACCURACY is not set, the accuracy is estimated automatically.
<i>CFG-SFIMU-IMU_EN</i>	0x1006001d	L	-	-	IMU enabled Flag indicating that IMU is connected to the sensor I2C.
<i>CFG-SFIMU-IMU_I2C_SCL_PIO</i>	0x2006001e	U1	-	-	SCL PIO of the IMU I2C IMU I2C SCL PIO number that should be used by the FW for communication with the sensor.
<i>CFG-SFIMU-IMU_I2C_SDA_PIO</i>	0x2006001f	U1	-	-	SDA PIO of the IMU I2C IMU I2C SDA PIO number that should be used by the FW for communication with the sensor.
<i>CFG-SFIMU-AUTO_MNTALG_ENA</i>	0x10060027	L	-	-	Enable automatic IMU-mount alignment Enable automatic IMU-mount alignment. This flag can only be used with modules containing an internal IMU.
<i>CFG-SFIMU-IMU_MNTALG_YAW</i>	0x4006002d	U4	1e-2	deg	User-defined IMU-mount yaw angle [0, 36000] User-defined IMU-mount yaw angle, e.g. for 60.00 degree yaw angle the configured value would be 6000.
<i>CFG-SFIMU-IMU_MNTALG_PITCH</i>	0x3006002e	I2	1e-2	deg	User-defined IMU-mount pitch angle [-9000, 9000] User-defined IMU-mount pitch angle, e.g. for 60.00 degree pitch angle the configured value would be 6000.
<i>CFG-SFIMU-IMU_MNTALG_ROLL</i>	0x3006002f	I2	1e-2	deg	User-defined IMU-mount roll angle [-18000, 18000]

Configuration item	Key ID	Type	Scale	Unit	Description
					User-defined IMU-mount roll angle, e.g. for 60.00 degree roll angle the configured value would be 6000.

**Table 42: CFG-SFIMU configuration items**

#### 4.9.21 CFG-SFODO: Sensor fusion (SF) odometer configuration

This group contains configuration items related to odometer sensors for Dead Reckoning (DR) products.

More details on the configuration parameters can be found in the ADR section of the integration manual.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SFODO-COMBINE_TICKS</i>	0x10070001	L	-	-	Use combined rear wheel ticks instead of the single tick
<i>CFG-SFODO-USE_SPEED</i>	0x10070003	L	-	-	Use speed measurements Use speed measurements (data type 11 in ESF-MEAS) instead of single ticks (data type 10)
<i>CFG-SFODO-DIS_AUTOCOUNTMAX</i>	0x10070004	L	-	-	Disable automatic estimation of maximum absolute wheel tick counter Disable automatic estimation of maximum absolute wheel tick counter value. See <a href="#">CFG-SFODO-COUNT_MAX</a> item description for more details.
<i>CFG-SFODO-DIS_AUTODIRPINPOL</i>	0x10070005	L	-	-	Disable automatic wheel tick direction pin polarity detection Disable automatic wheel tick direction pin polarity detection. See <a href="#">CFG-SFODO-DIR_PINPOL</a> item description for more details.
<i>CFG-SFODO-DIS_AUTOSPEED</i>	0x10070006	L	-	-	Disable automatic receiver reconfiguration for processing speed data instead of wheel tick data Disable automatic receiver reconfiguration for processing speed data instead of wheel tick data if no wheel tick data are available but speed data were detected. See <a href="#">CFG-SFODO-USE_SPEED</a> item description for more details.
<i>CFG-SFODO-FACTOR</i>	0x40070007	U4	1e-6	-	Wheel tick scale factor Wheel tick scale factor to obtain distance [m] from wheel ticks.
<i>CFG-SFODO-QUANT_ERROR</i>	0x40070008	U4	1e-6	m (or m/s)	Wheel tick quantization Wheel tick quantization. If <a href="#">CFG-SFODO-USE_SPEED</a> is set then this is interpreted as the speed measurement error RMS.
<i>CFG-SFODO-COUNT_MAX</i>	0x40070009	U4	-	-	Wheel tick counter maximum value Wheel tick counter maximum value (rollover - 1). If null, relative wheel tick counts are assumed (and therefore no rollover). If not zero, absolute wheel tick counts are assumed and the value corresponds to the highest tick count value before rollover happens. If <a href="#">CFG-SFODO-USE_SPEED</a> is set then this value is ignored. If value is set to 1, absolute wheel tick counts are assumed and the value will be automatically calculated if possible. It is only possible for automatic calibration to calculate wheel tick counter maximum value if it can be represented as a number of set bits (i.e. 2^N). If it cannot be represented in this way it must be set to the correct absolute tick value manually.
<i>CFG-SFODO-LATENCY</i>	0x3007000a	U2	-	ms	Wheel tick data latency due to e.g. CAN bus
<i>CFG-SFODO-FREQUENCY</i>	0x2007000b	U1	-	Hz	Nominal wheel tick data frequency (0 = not set)
<i>CFG-SFODO-CNT_BOTH_EDGES</i>	0x1007000d	L	-	-	Count both rising and falling edges on wheel tick signal Count both rising and falling edges on wheel tick signal (only relevant if wheel tick is measured by the u-blox receiver). <i>Only turn on this feature if the wheel tick signal has 50 % duty cycle. Turning on this feature with fixed-width pulses can lead to severe degradation of performance.</i> Use wheel tick pin for speed measurement. This field can only be used with modules supporting analog wheel tick signals.
<i>CFG-SFODO-SPEED_BAND</i>	0x3007000e	U2	-	cm/s	Speed sensor dead band (0 = not set)

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SFODO-USE_WT_PIN</i>	0x1007000f	L	-	-	Wheel tick signal enabled Flag indicating that wheel tick signal is connected.
<i>CFG-SFODO-DIR_PINPOL</i>	0x10070010	L	-	-	Wheel tick direction pin polarity 0 : Pin high means forwards direction 1 : Pin high means backwards direction
<i>CFG-SFODO-DIS_AUTOSW</i>	0x10070011	L	-	-	Disable automatic use of wheel tick or speed data received over the software interface Disable automatic use of wheel tick or speed data received over the software interface if available. In this case, data coming from the hardware interface (wheel tick pins) will automatically be ignored if wheel tick/speed data are available from the software interface. See <i>CFG-SFODO-USE_WT_PIN</i> description for more details.
<i>CFG-SFODO-DIS_DIR_INFO</i>	0x1007001c	L	-	-	Do not use directional information Directional information including the direction bit and pin as well as the sign of the speed data is ignored.

**Table 43: CFG-SFODO configuration items**

#### 4.9.22 CFG-SIGNAL: Satellite systems (GNSS) signal configuration

The enable items for individual signals are governed by their corresponding constellation enable item. It is necessary that at least one signal from a major GNSS constellation is enabled. See GNSS signal configuration in the integration manual for more details.

Configuration specific to a GNSS system is available in other groups (e.g. CFG-SBAS).

Note that changes to any items within this group will trigger a reset to the GNSS subsystem. The reset takes some time, so wait first for the acknowledgement from the receiver and then 0.5 seconds before sending the next command.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SIGNAL-GPS_ENA</i>	0x1031001f	L	-	-	GPS enable
<i>CFG-SIGNAL-GPS_L1CA_ENA</i>	0x10310001	L	-	-	GPS L1C/A
<i>CFG-SIGNAL-SBAS_ENA</i>	0x10310020	L	-	-	SBAS enable
<i>CFG-SIGNAL-SBAS_L1CA_ENA</i>	0x10310005	L	-	-	SBAS L1C/A
<i>CFG-SIGNAL-GAL_ENA</i>	0x10310021	L	-	-	Galileo enable
<i>CFG-SIGNAL-GAL_E1_ENA</i>	0x10310007	L	-	-	Galileo E1
<i>CFG-SIGNAL-BDS_ENA</i>	0x10310022	L	-	-	BeiDou Enable
<i>CFG-SIGNAL-BDS_B1_ENA</i>	0x1031000d	L	-	-	BeiDou B1I
<i>CFG-SIGNAL-QZSS_ENA</i>	0x10310024	L	-	-	QZSS enable
<i>CFG-SIGNAL-QZSS_L1CA_ENA</i>	0x10310012	L	-	-	QZSS L1C/A
<i>CFG-SIGNAL-QZSS_L1S_ENA</i>	0x10310014	L	-	-	QZSS L1S
<i>CFG-SIGNAL-GLO_ENA</i>	0x10310025	L	-	-	GLONASS enable
<i>CFG-SIGNAL-GLO_L1_ENA</i>	0x10310018	L	-	-	GLONASS L1

**Table 44: CFG-SIGNAL configuration items**

#### 4.9.23 CFG-SPI: Configuration of the SPI interface

Settings needed to configure the SPI communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SPI-MAXFF</i>	0x20640001	U1	-	-	Number of bytes containing 0xFF to receive before switching off reception. Range: 0 (mechanism off) - 63

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SPI-CPOLARITY</i>	0x10640002	L	-	-	Clock polarity select: 0: Active High Clock, SCLK idles low, 1: Active Low Clock, SCLK idles high
<i>CFG-SPI-CPHASE</i>	0x10640003	L	-	-	Clock phase select: 0: Data captured on first edge of SCLK, 1: Data captured on second edge of SCLK
<i>CFG-SPI-EXTENDEDTIMEOUT</i>	0x10640005	L	-	-	Flag to disable timeouting the interface after 1.5s
<i>CFG-SPI-ENABLED</i>	0x10640006	L	-	-	Flag to indicate if the SPI interface should be enabled

**Table 45: CFG-SPI configuration items**

#### 4.9.24 CFG-SPIINPROT: Input protocol configuration of the SPI interface

Input protocol enable flags of the SPI interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SPIINPROT-UBX</i>	0x10790001	L	-	-	Flag to indicate if UBX should be an input protocol on SPI
<i>CFG-SPIINPROT-NMEA</i>	0x10790002	L	-	-	Flag to indicate if NMEA should be an input protocol on SPI

**Table 46: CFG-SPIINPROT configuration items**

#### 4.9.25 CFG-SPIOUTPROT: Output protocol configuration of the SPI interface

Output protocol enable flags of the SPI interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SPIOUTPROT-UBX</i>	0x107a0001	L	-	-	Flag to indicate if UBX should be an output protocol on SPI
<i>CFG-SPIOUTPROT-NMEA</i>	0x107a0002	L	-	-	Flag to indicate if NMEA should be an output protocol on SPI

**Table 47: CFG-SPIOUTPROT configuration items**

#### 4.9.26 CFG-TP: Time pulse configuration

Use this group to configure the generation of time pulses.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TP-PULSE_DEF</i>	0x20050023	E1	-	-	Determines whether the time pulse is interpreted as frequency or period

See [Table 49](#) below for a list of possible constants for this item.

<i>CFG-TP-PULSE_LENGTH_DEF</i>	0x20050030	E1	-	-	Determines whether the time pulse length is interpreted as length[us] or pulse ratio[%]
--------------------------------	------------	----	---	---	-----------------------------------------------------------------------------------------

See [Table 50](#) below for a list of possible constants for this item.

<i>CFG-TP-ANT_CABLEDELAY</i>	0x30050001	I2	1e-9	s	Antenna cable delay in [ns]
------------------------------	------------	----	------	---	-----------------------------

<i>CFG-TP-PERIOD_TP1</i>	0x40050002	U4	1e-6	s	Time pulse period (TP1) in [us]
--------------------------	------------	----	------	---	---------------------------------

This will only be used if CFG-TP-PULSE\_DEF=PERIOD.

<i>CFG-TP-PERIOD_LOCK_TP1</i>	0x40050003	U4	1e-6	s	Time pulse period when locked to GNSS time (TP1) in [us]
-------------------------------	------------	----	------	---	----------------------------------------------------------

Only used if CFG-TP-PULSE\_DEF=PERIOD and CFG-TP-USE\_LOCKED\_TP1 is set.

<i>CFG-TP-FREQ_TP1</i>	0x40050024	U4	-	Hz	Time pulse frequency (TP1) in [Hz]
------------------------	------------	----	---	----	------------------------------------

This will only be used if CFG-TP-PULSE\_DEF=FREQ.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TP-FREQ_LOCK_TP1</i>	0x40050025	U4	-	Hz	Time pulse frequency when locked to GNSS time (TP1) in [Hz]  Only used if CFG-TP-PULSE_DEF=FREQ and CFG-TP-USE_LOCKED_TP1 is set.
<i>CFG-TP-LEN_TP1</i>	0x40050004	U4	1e-6	s	Time pulse length (TP1) in [us]  Only used if CFG-TP-PULSE_LENGTH_DEF=LENGTH is set.
<i>CFG-TP-LEN_LOCK_TP1</i>	0x40050005	U4	1e-6	s	Time pulse length when locked to GNSS time (TP1) in [us]  Only used if CFG-TP-PULSE_LENGTH_DEF=LENGTH and CFG-TP-USE_LOCKED_TP1 is set.
<i>CFG-TP-DUTY_TP1</i>	0x5005002a	R8	-	%	Time pulse duty cycle (TP1) in [%]  Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO is set.
<i>CFG-TP-DUTY_LOCK_TP1</i>	0x5005002b	R8	-	%	Time pulse duty cycle when locked to GNSS time (TP1) in [%]  Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO and CFG-TP-USE_LOCKED_TP1 are set.
<i>CFG-TP-USER_DELAY_TP1</i>	0x40050006	I4	1e-9	s	User-configurable time pulse delay (TP1) in [ns]
<i>CFG-TP-TP1_ENA</i>	0x10050007	L	-	-	Enable the first time pulse  if pin associated with time pulse is assigned for another function, the other function takes precedence. Must be set for frequency-time products.
<i>CFG-TP-SYNC_GNSS_TP1</i>	0x10050008	L	-	-	Sync time pulse to GNSS time or local clock (TP1)  If set, sync to GNSS if GNSS time is valid. Otherwise, use local clock. This flag can be unset only in Timing product variants.
<i>CFG-TP-USE_LOCKED_TP1</i>	0x10050009	L	-	-	Use locked parameters when possible (TP1)  If set, use CFG-TP-PERIOD_LOCK_TP1 and CFG-TP-LEN_LOCK_TP1 as soon as GNSS time is valid. Otherwise, use CFG-TP-PERIOD_TP1 and CFG-TP-LEN_TP1.
<i>CFG-TP-ALIGN_TO_TOW_TP1</i>	0x1005000a	L	-	-	Align time pulse to top of second (TP1)  To use this feature, CFG-TP-SYNC_GNSS_TP1 must be set. Time pulse period must be an integer fraction of 1 second.
<i>CFG-TP-POL_TP1</i>	0x1005000b	L	-	-	Set time pulse polarity (TP1)  false (0) : falling edge at top of second. true (1) : rising edge at top of second.
<i>CFG-TP-TIMEGRID_TP1</i>	0x2005000c	E1	-	-	Time grid to use (TP1)  Only relevant if CFG-TP-SYNC_GNSS_TP1 is set. Note that configured GNSS time is estimated by the receiver if locked to any GNSS system. If the receiver has a valid GNSS fix it will attempt to steer the TP to the specified time grid even if the specified time is not based on information from the constellation's satellites. To ensure timing based purely on a given GNSS, restrict the supported constellations in CFG-SIGNAL-*. No TP is generated if the selected GNSS constellation is not configured. See <a href="#">Table 51</a> below for a list of possible constants for this item.
<i>CFG-TP-PERIOD_TP2</i>	0x4005000d	U4	1e-6	s	Time pulse period (TP2) in [us]  This will only be used if CFG-TP-PULSE_DEF=PERIOD.
<i>CFG-TP-PERIOD_LOCK_TP2</i>	0x4005000e	U4	1e-6	s	Time pulse period when locked to GNSS time (TP2) in [us]  Only used if CFG-TP-PULSE_DEF=PERIOD and CFG-TP-USE_LOCKED_TP2 is set.
<i>CFG-TP-FREQ_TP2</i>	0x40050026	U4	-	Hz	Time pulse frequency (TP2)  Only used if CFG-TP-PULSE_DEF=FREQ.
<i>CFG-TP-FREQ_LOCK_TP2</i>	0x40050027	U4	-	Hz	Time pulse frequency when locked to GNSS time (TP2) in [Hz]

Configuration item	Key ID	Type	Scale	Unit	Description
Only used if CFG-TP-PULSE_DEF=FREQ and CFG-TP-USE_LOCKED_TP2 is set.					
CFG-TP-LEN_TP2	0x4005000f	U4	1e-6	s	Time pulse length (TP2) in [us]
Only used if CFG-TP-PULSE_LENGTH_DEF=LENGTH is set.					
CFG-TP-LEN_LOCK_TP2	0x40050010	U4	1e-6	s	Time pulse length when locked to GNSS time (TP2) in [us]
Only used if CFG-TP-PULSE_LENGTH_DEF=LENGTH and CFG-TP-USE_LOCKED_TP2 is set.					
CFG-TP-DUTY_TP2	0x5005002c	R8	-	%	Time pulse duty cycle (TP2) in [%]
Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO is set.					
CFG-TP-DUTY_LOCK_TP2	0x5005002d	R8	-	%	Time pulse duty cycle when locked to GNSS time (TP2)
Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO and CFG-TP-USE_LOCKED_TP2 are set.					
CFG-TP-USER_DELAY_TP2	0x40050011	I4	1e-9	s	User-configurable time pulse delay (TP2) in [ns]
CFG-TP-TP2_ENA	0x10050012	L	-	-	Enable the second time pulse
CFG-TP-SYNC_GNSS_TP2	0x10050013	L	-	-	Sync time pulse to GNSS time or local clock (TP2)
If set, sync to GNSS if GNSS time is valid. Otherwise, use local clock.					
This flag can be unset only in Timing product variants.					
CFG-TP-USE_LOCKED_TP2	0x10050014	L	-	-	Use locked parameters when possible (TP2)
If set, use CFG-TP-PERIOD_LOCK_TP2 and CFG-TP-LEN_LOCK_TP2 as soon as GNSS time is valid. Otherwise, use CFG-TP-PERIOD_TP2 and CFG-TP-LEN_TP2.					
CFG-TP-ALIGN_TO_TOW_TP2	0x10050015	L	-	-	Align time pulse to top of second (TP2)
To use this feature, CFG-TP-SYNC_GNSS_TP2 must be set.					
Time pulse period must be an integer fraction of 1 second.					
CFG-TP-POL_TP2	0x10050016	L	-	-	Set time pulse polarity (TP2)
false (0) : falling edge at top of second.					
true (1) : rising edge at top of second.					
CFG-TP-TIMEGRID_TP2	0x20050017	E1	-	-	Time grid to use (TP2)
Only relevant if CFG-TP-SYNC_GNSS_TP2 is set.					
Note that configured GNSS time is estimated by the receiver if locked to any GNSS system. If the receiver has a valid GNSS fix it will attempt to steer the TP to the specified time grid even if the specified time is not based on information from the constellation's satellites. To ensure timing based purely on a given GNSS, restrict the supported constellations in CFG-SIGNAL-*					
No TP is generated if the selected GNSS constellation is not configured.					
See <a href="#">Table 52</a> below for a list of possible constants for this item.					
CFG-TP-DRSTR_TP1	0x20050035	E1	-	-	Set drive strength of TP1
Time Pulse pin 1 (TP1) can support 4 possible drive strength cases: 2, 4, 8 and 12 mA					
See <a href="#">Table 53</a> below for a list of possible constants for this item.					
CFG-TP-DRSTR_TP2	0x20050036	E1	-	-	Set drive strength of TP2
Time Pulse pin 2 (TP2) can support 4 possible drive strength cases: 2, 4, 8 and 12 mA					
See <a href="#">Table 54</a> below for a list of possible constants for this item.					

**Table 48: CFG-TP configuration items**

Constant	Value	Description
PERIOD	0	Time pulse period [us]
FREQ	1	Time pulse frequency [Hz]

<i>DRIVE_STRENGTH_12MA</i>	3	12 mA drive strength

**Table 54: Constants for CFG-TP-DRSTR\_TP2**

#### 4.9.27 CFG-TXREADY: TX ready configuration

Configuration of the TX ready pin.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TXREADY-ENABLED</i>	0x10a20001	L	-	-	Flag to indicate if TX ready pin mechanism should be enabled
<i>CFG-TXREADY-POLARITY</i>	0x10a20002	L	-	-	The polarity of the TX ready pin: false:high-active, true:low-active

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TXREADY-PIN</i>	0x20a20003	U1	-	-	Pin number to use for the TX ready functionality
<i>CFG-TXREADY-THRESHOLD</i>	0x30a20004	U2	-	-	Amount of data that should be ready on the interface before triggering the TX ready pin  The value is amount of 8-byte chunks. For example, value of 250 sets the trigger to 2000 bytes.
<i>CFG-TXREADY-INTERFACE</i>	0x20a20005	E1	-	-	Interface where the TX ready feature should be linked to  See <a href="#">Table 56</a> below for a list of possible constants for this item.

**Table 55: CFG-TXREADY configuration items**

Constant	Value	Description
<i>I2C</i>	0	I2C interface
<i>SPI</i>	1	SPI interface

**Table 56: Constants for CFG-TXREADY-INTERFACE**

## 4.9.28 CFG-UART1: Configuration of the UART1 interface

Settings needed to configure the UART1 communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART1-BAUDRATE</i>	0x40520001	U4	-	-	The baud rate that should be configured on the UART1
<i>CFG-UART1-STOPBITS</i>	0x20520002	E1	-	-	Number of stopbits that should be used on UART1  See <a href="#">Table 58</a> below for a list of possible constants for this item.
<i>CFG-UART1-DATABITS</i>	0x20520003	E1	-	-	Number of databits that should be used on UART1  See <a href="#">Table 59</a> below for a list of possible constants for this item.
<i>CFG-UART1-PARITY</i>	0x20520004	E1	-	-	Parity mode that should be used on UART1  See <a href="#">Table 60</a> below for a list of possible constants for this item.
<i>CFG-UART1-ENABLED</i>	0x10520005	L	-	-	Flag to indicate if the UART1 should be enabled

**Table 57: CFG-UART1 configuration items**

Constant	Value	Description
<i>HALF</i>	0	0.5 stopbits
<i>ONE</i>	1	1.0 stopbits
<i>ONEHALF</i>	2	1.5 stopbits
<i>TWO</i>	3	2.0 stopbits

**Table 58: Constants for CFG-UART1-STOPBITS**

Constant	Value	Description
<i>EIGHT</i>	0	8 databits
<i>SEVEN</i>	1	7 databits

**Table 59: Constants for CFG-UART1-DATABITS**

Constant	Value	Description
<i>NONE</i>	0	No parity bit
<i>ODD</i>	1	Add an odd parity bit

Constant	Value	Description
<i>EVEN</i>	2	Add an even parity bit

**Table 60: Constants for CFG-UART1-PARITY**

#### 4.9.29 CFG-UART1INPROT: Input protocol configuration of the UART1 interface

Input protocol enable flags of the UART1 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART1INPROT-UBX</i>	0x10730001	L	-	-	Flag to indicate if UBX should be an input protocol on UART1
<i>CFG-UART1INPROT-NMEA</i>	0x10730002	L	-	-	Flag to indicate if NMEA should be an input protocol on UART1

**Table 61: CFG-UART1INPROT configuration items**

#### 4.9.30 CFG-UART1OUTPROT: Output protocol configuration of the UART1 interface

Output protocol enable flags of the UART1 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART1OUTPROT-UBX</i>	0x10740001	L	-	-	Flag to indicate if UBX should be an output protocol on UART1
<i>CFG-UART1OUTPROT-NMEA</i>	0x10740002	L	-	-	Flag to indicate if NMEA should be an output protocol on UART1

**Table 62: CFG-UART1OUTPROT configuration items**

#### 4.9.31 CFG-UART2: Configuration of the UART2 interface

Settings needed to configure the UART2 communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART2-BAUDRATE</i>	0x40530001	U4	-	-	The baud rate that should be configured on the UART2
<i>CFG-UART2-STOPBITS</i>	0x20530002	E1	-	-	Number of stopbits that should be used on UART2
					See <a href="#">Table 64</a> below for a list of possible constants for this item.
<i>CFG-UART2-DATABITS</i>	0x20530003	E1	-	-	Number of databits that should be used on UART2
					See <a href="#">Table 65</a> below for a list of possible constants for this item.
<i>CFG-UART2-PARITY</i>	0x20530004	E1	-	-	Parity mode that should be used on UART2
					See <a href="#">Table 66</a> below for a list of possible constants for this item.
<i>CFG-UART2-ENABLED</i>	0x10530005	L	-	-	Flag to indicate if the UART2 should be enabled

**Table 63: CFG-UART2 configuration items**

Constant	Value	Description
<i>HALF</i>	0	0.5 stopbits
<i>ONE</i>	1	1.0 stopbits
<i>ONEHALF</i>	2	1.5 stopbits
<i>TWO</i>	3	2.0 stopbits

**Table 64: Constants for CFG-UART2-STOPBITS**

Constant	Value	Description
<i>EIGHT</i>	0	8 databits

Constant	Value	Description
SEVEN	1	7 databits

**Table 65: Constants for CFG-UART2-DATABITS**

Constant	Value	Description
NONE	0	No parity bit
ODD	1	Add an odd parity bit
EVEN	2	Add an even parity bit

**Table 66: Constants for CFG-UART2-PARITY**

### 4.9.32 CFG-UART2INPROT: Input protocol configuration of the UART2 interface

Input protocol enable flags of the UART2 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-UART2INPROT-UBX	0x10750001	L	-	-	Flag to indicate if UBX should be an input protocol on UART2
CFG-UART2INPROT-NMEA	0x10750002	L	-	-	Flag to indicate if NMEA should be an input protocol on UART2

**Table 67: CFG-UART2INPROT configuration items**

### 4.9.33 CFG-UART2OUTPROT: Output protocol configuration of the UART2 interface

Output protocol enable flags of the UART2 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-UART2OUTPROT-UBX	0x10760001	L	-	-	Flag to indicate if UBX should be an output protocol on UART2
CFG-UART2OUTPROT-NMEA	0x10760002	L	-	-	Flag to indicate if NMEA should be an output protocol on UART2

**Table 68: CFG-UART2OUTPROT configuration items**

### 4.9.34 CFG-USB: Configuration of the USB interface

Settings needed to configure the USB communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-USB-ENABLED	0x10650001	L	-	-	Flag to indicate if the USB interface should be enabled
CFG-USB-SELFPOW	0x10650002	L	-	-	Self-powered device
CFG-USB-VENDOR_ID	0x3065000a	U2	-	-	Vendor ID
CFG-USB-PRODUCT_ID	0x3065000b	U2	-	-	Vendor ID
CFG-USB-POWER	0x3065000c	U2	-	mA	Power consumption
CFG-USB-VENDOR_STR0	0x5065000d	X8	-	-	Vendor string characters 0-7
CFG-USB-VENDOR_STR1	0x5065000e	X8	-	-	Vendor string characters 8-15
CFG-USB-VENDOR_STR2	0x5065000f	X8	-	-	Vendor string characters 16-23
CFG-USB-VENDOR_STR3	0x50650010	X8	-	-	Vendor string characters 24-31
CFG-USB-PRODUCT_STR0	0x50650011	X8	-	-	Product string characters 0-7
CFG-USB-PRODUCT_STR1	0x50650012	X8	-	-	Product string characters 8-15
CFG-USB-PRODUCT_STR2	0x50650013	X8	-	-	Product string characters 16-23
CFG-USB-PRODUCT_STR3	0x50650014	X8	-	-	Product string characters 24-31

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-USB-SERIAL_NO_STRO</i>	0x50650015	X8	-	-	Serial number string characters 0-7
<i>CFG-USB-SERIAL_NO_STR1</i>	0x50650016	X8	-	-	Serial number string characters 8-15
<i>CFG-USB-SERIAL_NO_STR2</i>	0x50650017	X8	-	-	Serial number string characters 16-23
<i>CFG-USB-SERIAL_NO_STR3</i>	0x50650018	X8	-	-	Serial number string characters 24-31

**Table 69: CFG-USB configuration items**

#### 4.9.35 CFG-USBINPROT: Input protocol configuration of the USB interface

Input protocol enable flags of the USB interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-USBINPROT-UBX</i>	0x10770001	L	-	-	Flag to indicate if UBX should be an input protocol on USB
<i>CFG-USBINPROT-NMEA</i>	0x10770002	L	-	-	Flag to indicate if NMEA should be an input protocol on USB

**Table 70: CFG-USBINPROT configuration items**

#### 4.9.36 CFG-USBOUTPROT: Output protocol configuration of the USB interface

Output protocol enable flags of the USB interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-USBOUTPROT-UBX</i>	0x10780001	L	-	-	Flag to indicate if UBX should be an output protocol on USB
<i>CFG-USBOUTPROT-NMEA</i>	0x10780002	L	-	-	Flag to indicate if NMEA should be an output protocol on USB

**Table 71: CFG-USBOUTPROT configuration items**

## 4.10 Legacy UBX message fields reference

The following table lists the legacy UBX message fields and the corresponding configuration item. Note that the mapping from [UBX-CFG](#) message fields to configuration items is not necessarily 1:1 and that some legacy UBX-CFG messages may not be available for certain products.

UBX message and field	Configuration item(s)
<b>UBX-CFG-ANT</b>	
UBX-CFG-ANT.ocd	<a href="#">CFG-HW-ANT_CFG_OPENDET</a>
UBX-CFG-ANT.pdwnOnSCD	<a href="#">CFG-HW-ANT_CFG_PWRDOWN</a>
UBX-CFG-ANT.pinOCD	<a href="#">CFG-HW-ANT_SUP_OPEN_PIN</a>
UBX-CFG-ANT.pinSCD	<a href="#">CFG-HW-ANT_SUP_SHORT_PIN</a>
UBX-CFG-ANT.pinSwitch	<a href="#">CFG-HW-ANT_SUP_SWITCH_PIN</a>
UBX-CFG-ANT.recovery	<a href="#">CFG-HW-ANT_CFG_RECOVER</a>
UBX-CFG-ANT.scd	<a href="#">CFG-HW-ANT_CFG_SHORTDET</a>
UBX-CFG-ANT.svcs	<a href="#">CFG-HW-ANT_CFG_VOLTCTRL</a>
<b>UBX-CFG-DAT</b>	
UBX-CFG-DAT.dX	<a href="#">CFG-NAVSPG-USRDAT_DX</a>
UBX-CFG-DAT.dY	<a href="#">CFG-NAVSPG-USRDAT_DY</a>
UBX-CFG-DAT.dZ	<a href="#">CFG-NAVSPG-USRDAT_DZ</a>
UBX-CFG-DAT.flat	<a href="#">CFG-NAVSPG-USRDAT_FLAT</a>
UBX-CFG-DAT.majA	<a href="#">CFG-NAVSPG-USE_USRDAT</a> , <a href="#">CFG-NAVSPG-USRDAT_MAJA</a>
UBX-CFG-DAT.rotX	<a href="#">CFG-NAVSPG-USRDAT_ROTX</a>

UBX message and field	Configuration item(s)
UBX-CFG-DAT.rotY	CFG-NAVSPG-USRDAT_ROT_Y
UBX-CFG-DAT.rotZ	CFG-NAVSPG-USRDAT_ROT_Z
UBX-CFG-DAT.scale	CFG-NAVSPG-USRDAT_SCALE
<b>UBX-CFG-ESFA</b>	
UBX-CFG-ESFA.accelRmsThdl	CFG-SFIMU-ACCEL_RMSTHDL
UBX-CFG-ESFA.accuracy	CFG-SFIMU-ACCEL_ACCURACY
UBX-CFG-ESFA.frequency	CFG-SFIMU-ACCEL_FREQUENCY
UBX-CFG-ESFA.latency	CFG-SFIMU-ACCEL_LATENCY
<b>UBX-CFG-ESFALG</b>	
UBX-CFG-ESFALG.doAutoMntAlg	CFG-SFIMU-AUTO_MNTALG_ENA
UBX-CFG-ESFALG.pitch	CFG-SFIMU-IMU_MNTALG_PITCH
UBX-CFG-ESFALG.roll	CFG-SFIMU-IMU_MNTALG_ROLL
UBX-CFG-ESFALG.yaw	CFG-SFIMU-IMU_MNTALG_YAW
<b>UBX-CFG-ESFG</b>	
UBX-CFG-ESFG.accuracy	CFG-SFIMU-GYRO_ACCURACY
UBX-CFG-ESFG.frequency	CFG-SFIMU-GYRO_FREQUENCY
UBX-CFG-ESFG.gyroRmsThdl	CFG-SFIMU-GYRO_RMSTHDL
UBX-CFG-ESFG.latency	CFG-SFIMU-GYRO_LATENCY
UBX-CFG-ESFG.tcTableSaveRate	CFG-SFIMU-GYRO_TC_UPDATE_PERIOD
<b>UBX-CFG-ESFGAWT</b>	
UBX-CFG-ESFGAWT.accelAcc	CFG-SFIMU-ACCEL_ACCURACY
UBX-CFG-ESFGAWT.accelFrequency	CFG-SFIMU-ACCEL_FREQUENCY
UBX-CFG-ESFGAWT.accelLatency	CFG-SFIMU-ACCEL_LATENCY
UBX-CFG-ESFGAWT.accelRmsThdl	CFG-SFIMU-ACCEL_RMSTHDL
UBX-CFG-ESFGAWT.gyroAcc	CFG-SFIMU-GYRO_ACCURACY
UBX-CFG-ESFGAWT.gyroFrequency	CFG-SFIMU-GYRO_FREQUENCY
UBX-CFG-ESFGAWT.gyroLatency	CFG-SFIMU-GYRO_LATENCY
UBX-CFG-ESFGAWT.gyroRmsThdl	CFG-SFIMU-GYRO_RMSTHDL
UBX-CFG-ESFGAWT.tcTableSaveRate	CFG-SFIMU-GYRO_TC_UPDATE_PERIOD
<b>UBX-CFG-ESFGWT</b>	
UBX-CFG-ESFGWT.gyroAcc	CFG-SFIMU-GYRO_ACCURACY
UBX-CFG-ESFGWT.gyroFrequency	CFG-SFIMU-GYRO_FREQUENCY
UBX-CFG-ESFGWT.gyroLatency	CFG-SFIMU-GYRO_LATENCY
UBX-CFG-ESFGWT.gyroRmsThdl	CFG-SFIMU-GYRO_RMSTHDL
UBX-CFG-ESFGWT.tcTableSaveRate	CFG-SFIMU-GYRO_TC_UPDATE_PERIOD
<b>UBX-CFG-ESFWT</b>	
UBX-CFG-ESFWT.autoDirPinPolOff	CFG-SFODO-DIS_AUTODIRPINPOL
UBX-CFG-ESFWT.autoSoftwareWtOff	CFG-SFODO-DIS_AUTOSW
UBX-CFG-ESFWT.autoUseWtSpeedOff	CFG-SFODO-DIS_AUTOSPEED
UBX-CFG-ESFWT.autoWtCountMaxOff	CFG-SFODO-DIS_AUTOCOUNTMAX
UBX-CFG-ESFWT.cntBothEdges	CFG-SFODO-CNT_BOTH_EDGES
UBX-CFG-ESFWT.combineTicks	CFG-SFODO-COMBINE_TICKS
UBX-CFG-ESFWT.dirPinPol	CFG-SFODO-DIR_PINPOL
UBX-CFG-ESFWT.speedDeadBand	CFG-SFODO-SPEED_BAND

UBX message and field	Configuration item(s)
UBX-CFG-ESFWT.useWtPin	CFG-SFODO-USE_WT_PIN
UBX-CFG-ESFWT.useWtSpeed	CFG-SFODO-USE_SPEED
UBX-CFG-ESFWT.wtCountMax	CFG-SFODO-COUNT_MAX
UBX-CFG-ESFWT.wtFactor	CFG-SFODO-FACTOR
UBX-CFG-ESFWT.wtFrequency	CFG-SFODO-FREQUENCY
UBX-CFG-ESFWT.wtLatency	CFG-SFODO-LATENCY
UBX-CFG-ESFWT.wtQuantError	CFG-SFODO-QUANT_ERROR
<b>UBX-CFG-GEOFENCE</b>	
UBX-CFG-GEOFENCE.confLvl	CFG-GEOFENCE-CONFLVL
UBX-CFG-GEOFENCE.lat	CFG-GEOFENCE-FENCE1_LAT, CFG-GEOFENCE-FENCE2_LAT, CFG-GEOFENCE-FENCE3_LAT, CFG-GEOFENCE-FENCE4_LAT
